Digital Diagnostic Monitor (DDM) Functions

COMMANDO QSFP-SR4-100G transceiver module supports 2-wire serial communication protocol as defined in SFF-8472. Digital diagnostic information is accessible over the 2-wire interface at address 0xA2. Digital diagnostics for QSFP-SR4-100G are internally calibrated by default. The internal micro control unit accesses the device's operating parameters such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage in real time. The module implements the alarm function of the SFF-8472, alerts the user when a particular operating parameter exceeds the factory-set normal range.
