

COMMANDO AirONE AP1300 Indoor Access Points Configuration Guide

OVERVIEW

COMMANDO AirONE AP1300 is Indoor AP which enables communication between wireless and wired computers/laptops and mobile devices in the network. It complies IEEE 802.11ac/b/g/n standard and comes with dual band 2.4GHz+5GHz with Separate 10/100/1000Mbps WAN and LAN ports with Dual power input facility with either IEEE 802.3at PoE+ input or DC IN 12V, 1.5A.

Fig 1. Physical port on AirONE AP1300

Table 1. Physical port on AirONE AP1300 Description.

Physical Port	Description
Reset	Reset Button, makes AP revert to default settings after pressing for 15sec.
WAN/PoE	WAN Port, connect with PoE+ Switch or internet gateway.
LAN	LAN Port to end users Switch or PC for Accessing device via WEBGUI.
LED	Upper LED for WAN port and Lower LED for LAN port (Green and Blinking to show ACT/Link connection).

DC	DC input power 12V, 1.5 A.
----	----------------------------

Fig 2. Access information on AirONE AP1300

It is 4 in 1 mode Access Point with Gateway, Repeater, WISP and AP mode (Default Mode) with range up to 91 meters (300feets) and above in all directions with up to 390mW input Power. It is industrial grade Wall/Ceiling Indoor Access Point with speed up to 1300Mbps with Wave 2 Technology. It equipped with separate Gigabit WAN & LAN port which enhances the sharing of files, photo, audio, video and gaming experience over wireless network. It can also be used as DHCP server and works as layer 3 device when configured in gateway mode. It supports (IEEE 802.3at) PoE+, which helps in easy installation by eliminating the need of a dedicated power source and need of a power adapter. It can identify and determine the correct transmission speed and half/full duplex mode of the attached devices. It also supports standard Auto-MDI/MDI-X that can detect the type of connection to any Ethernet device without requiring special straight or crossover cables, Store-and-Forward forwarding scheme to ensure low latency and high data integrity.

You can access and manage AirONE AP1300 using the Web based GUI (Graphical User Interface) , also called WEB GUI interface.

INTRODUCTION

COMMANDO AirONE AP1300 Indoor AP are WEB GUI based easy to use and manage device. It requires minimal configuration, so setup is simple and hassle-free. Auto-negotiation senses the link speed of a network device in wired 10/100/1000Mbps and also for wireless clients. It intelligently adjusts for compatibility and optimal performance by DFS and setting channel bandwidth 20/40MHz wireless band and also can check free channels available with inbuilt Wi-Fi analysis. Its compact size makes it ideal for Indoor desktops/wall/ceiling with limited space. Dynamic LED lights provide real-time work status display and basic fault diagnosis. Easy Plug-and-play installation with no configuration required. It operates quietly, making it ideal for use in virtually any room or office. Perfect for noise sensitive environments. It has Dual power options with DC input power and PoE power input which protect from power failures and increases life of device. With Inbuilt security features protect your business by losing network sensitive information and data of wireless users/surveillance cameras connected to them.

It supports energy-efficient Ethernet that can save power. It automatically adjusts power consumption according to the link status to limit the carbon footprint of your network. It also complies with RoHS, CE, FC prohibiting the use of certain hazardous materials. Besides that most of the packaging material can be recycled and reused.

It has State of art quality product that can serve on real time high-speed Performance with dual input power, cost effective, highly reliable, conformance to international open standards, durable, serviceable, aesthetics, perceived quality, enhanced performance leads to value to money.

Hardware Highlights

Solid performance with non-blocking architecture

- Up to 32 MB Flash, 512MB RAM
- LAN and WAN ports capable of Gigabit Ethernet speed with (Auto-Negotiation/Auto MDI/MDIX).
- Solid performance with non-blocking architecture.

Physical Ports and Networking Interfaces

- Up to 2 x 10/100/1000 Mbps Rj45 Ethernet Ports with combined IEEE 802.3at PoE+ with WAN and separate LAN port
- LED Indicators: Power, LAN/WAN (Link/Act)

- Reset Button

Extra Long operational life

- Dual input Power Either DC 12V/1.5A or IEEE 802.3at PoE+ via WAN port.
- High Quality PCB Circuit Board and PCB Surface Treatment Using Gold Sinking Process.
- Support temperature range 0° C to 50° C
- Desktop and Wall mount design that enables to mounts Which enables horizontal and vertical wall mounting.
- Comes with one-year default warranty – optionally extendable up to 3 years

Noise-free Operation

- The ports support reduced power modes for silent operation. Perfect for noise sensitive environments.

Software Highlights

- Multiple Operational Modes like Gateway, Repeater, WISP and AP mode (Default mode).
- Multiple SSID with Up to 8 SSIDs with VAP.
- Supports IEEE 802.11ac/b/g/n 2.4GHz and 5GHz with Antenna RF input Power of 26dBm.
- Support Wave 2.0 Technology with wireless RF power adjustable as per user movements from AP.
- Access end users up to 128 max, with concurrent 100 end users.
- Support MAC ACL, DHCP Server, Static DHCP, URL Mapping, URL/IP/MAC Filter, DMZ, Time reboot, Flow Control and DDNS.
- Support tag VLAN and VLAN management.
- Supports intelligent load balance based on users.
- Support seamless roaming and low-rate terminal access.
- Support inbuilt WI-FI channel analysis.
- Internal Antenna enabling maximum client density deployments with no interference.
- Supports Wi-Fi client distance 91 meters (300 feet) and above in all directions depending on surrounding conditions.
- Support Open or encryption like WPA/WPA2PSK_TKIPAES.

How to take access of COMMANDO AirONE AP1300 ?

1. Wired access Via LAN port connected to PC.

Power ON AirONE AP1300.

Connect LAN port of AirONE AP1300 to PC via RJ-45 cable.

Open Network and sharing center.

Go to Change adapter settings.

Double click on Local Area Connection. Go to Properties. Double click on Internet Protocol Version 4 (TCP/IPv4) option and set any IP address from 192.168.188.1 to 252 and Gateway of PC to be set as 192.168.188.253 to as shown below.

Internet Protocol Version 4 (TCP/IPv4) Properties

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

Obtain an IP address automatically

Use the following IP address:

IP address:

192 . 168 . 188 . 100

Subnet mask:

255 . 255 . 255 . 0

Default gateway:

192 . 168 . 188 . 253

Obtain DNS server address automatically

Use the following DNS server addresses:

Preferred DNS server:

. . .

Alternate DNS server:

. . .

Validate settings upon exit

Advanced...

OK

Cancel

Fig 3. IP setting in PC connected to AirONE AP1300

2. Wireless access Via SSID connected to PC.

Power ON AirONE AP1300.

Connect Default SSID named "COMMANDO AIR-AP1300 2.4G" or "COMMANDO AIR-

AP1300 5.8G” with the help of default Wi-Fi Password “66666666” or “commando”.

Click on properties of connected SSID “COMMANDO AIR-AP1300 2.4G” or “COMMANDO AIR-AP1300 5.8G”.

Edit IP setting from DHCP to Manual and set any IP address form 192.168.188.1 to 252 and Gateway of PC to be set as 192.168.188.253 to as shown below.

Note:

All Default SSID and password can be changed as per user requirement.

Fig 6. Edit IP setting from DHCP to Manual as shown for COMMANDO AIR-AP1300 2.4G

Open any Web browser like Chrome/Firefox/Internet Explorer/Opera etc. and enter default IP address **192.168.188.253** in address field.

Caution:

If you have already taken any Other COMMANDO wireless device access. Then before taking access of this device, you are required to clean the browser history to avoid catch pages issue.

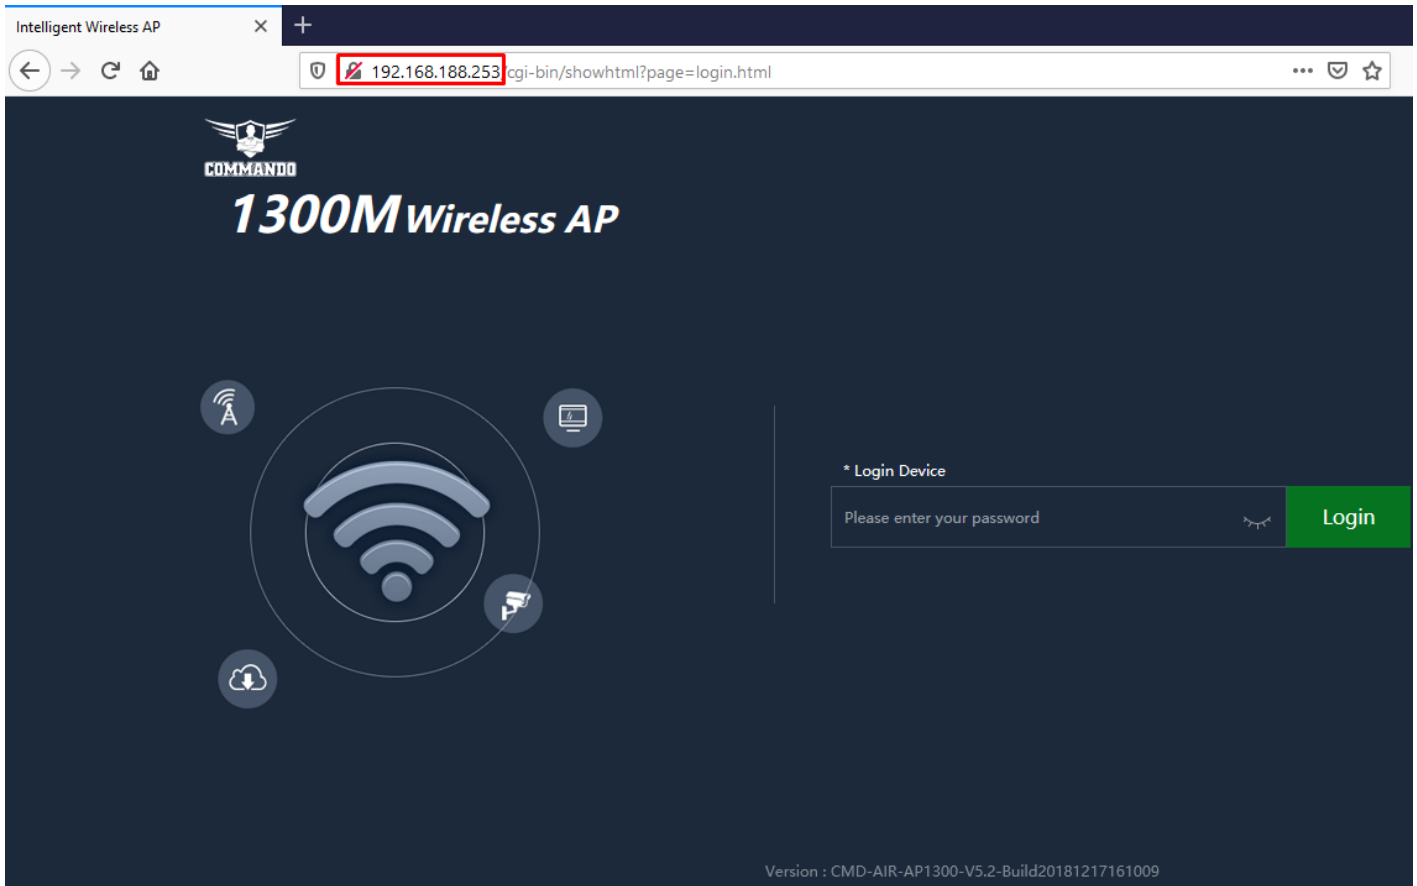

Fig 7. Login page for AirONE AP1300

Default Password: **commando** or (**admin** in few devices)

Note:

Password can be changed as per user choice. Default password is written on the label on backside of device.

After giving proper password Home page is displayed giving device information like CPU usage, memory usage, LAN Information like IP Mode Get IP From AC/Gateway/Static, Status with 2G/5G Wi-Fi Clients Status with information like SSID, Channel, Bandwidth, Encrypt, MAC Address, Operation Mode configure like AP/ Fat AP Mode with Uptime, Flow in bps for AP Downstream and AP Upstream.

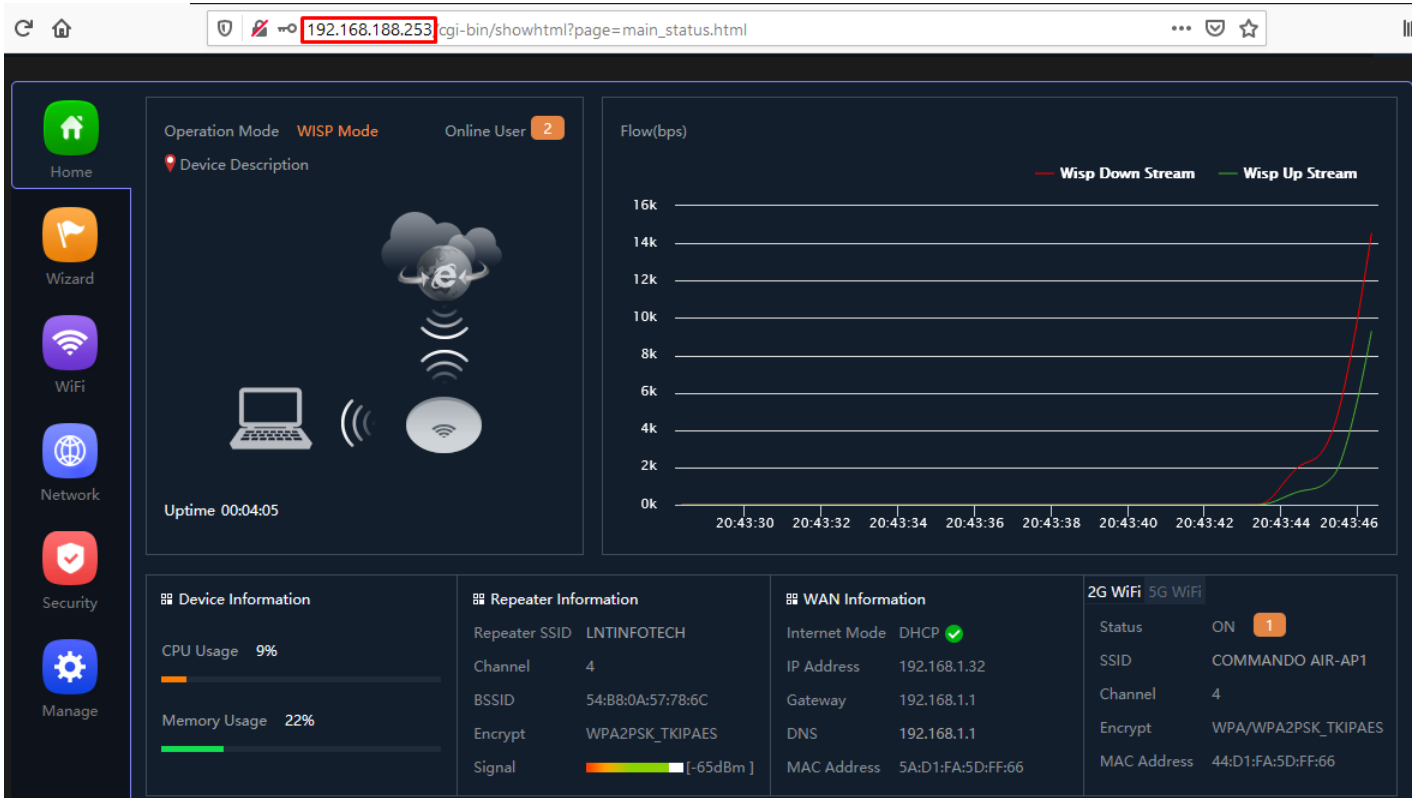

Fig 8. Home page after login AirONE AP1300

HOME

After login, home page will be showed. This page will show device Information like CPU Usage, Memory Usage, LAN/WAN Information like IP Mode Get IP From AC/Gateway/Static, Status with 2G/5G Wi-Fi Clients Status with information like SSID, Channel, Bandwidth, Encrypt, MAC Address, Operation Mode configure like AP/ Fat AP Mode with Uptime, Flow in bps for AP Downstream and AP Upstream. All information can help to troubleshoot network issue, if any very easily.

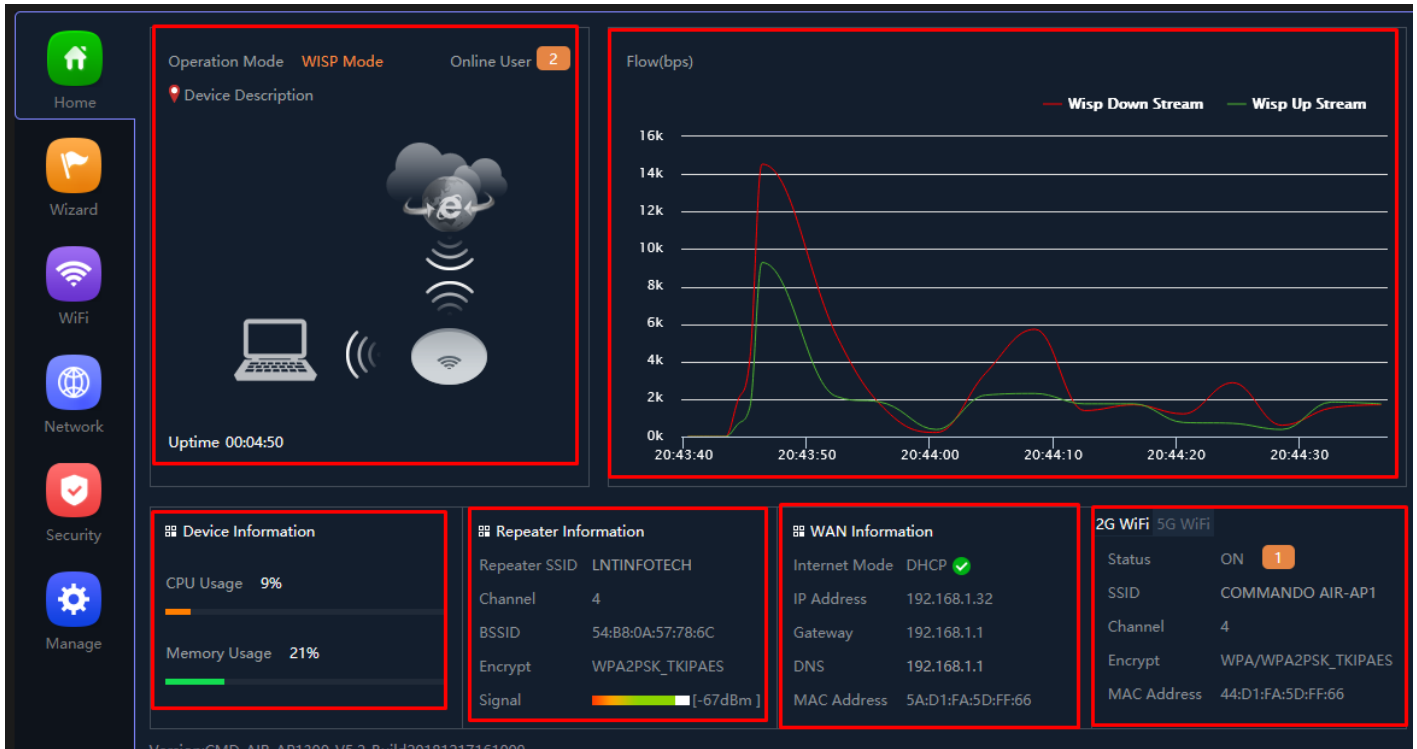

Fig 1.1 Home page Components of AirONE AP1300

1.1 Device Information

In Device Information, Current CPU Usage percentage and Memory Usage percentage of the AP is shown.

☐☐ Device Information

CPU Usage 6%

Memory Usage 26%

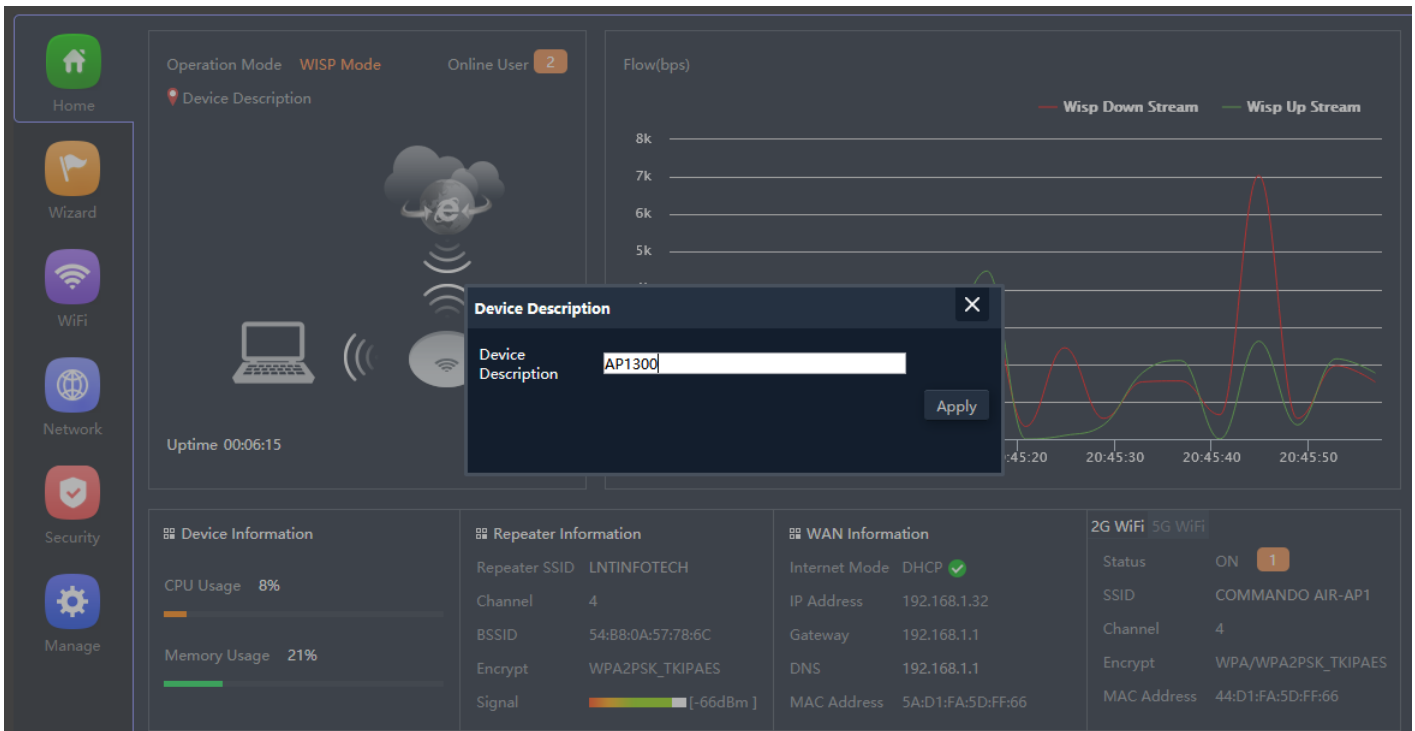

Fig 1.1.3 Changing Device Description of AirONE AP1300

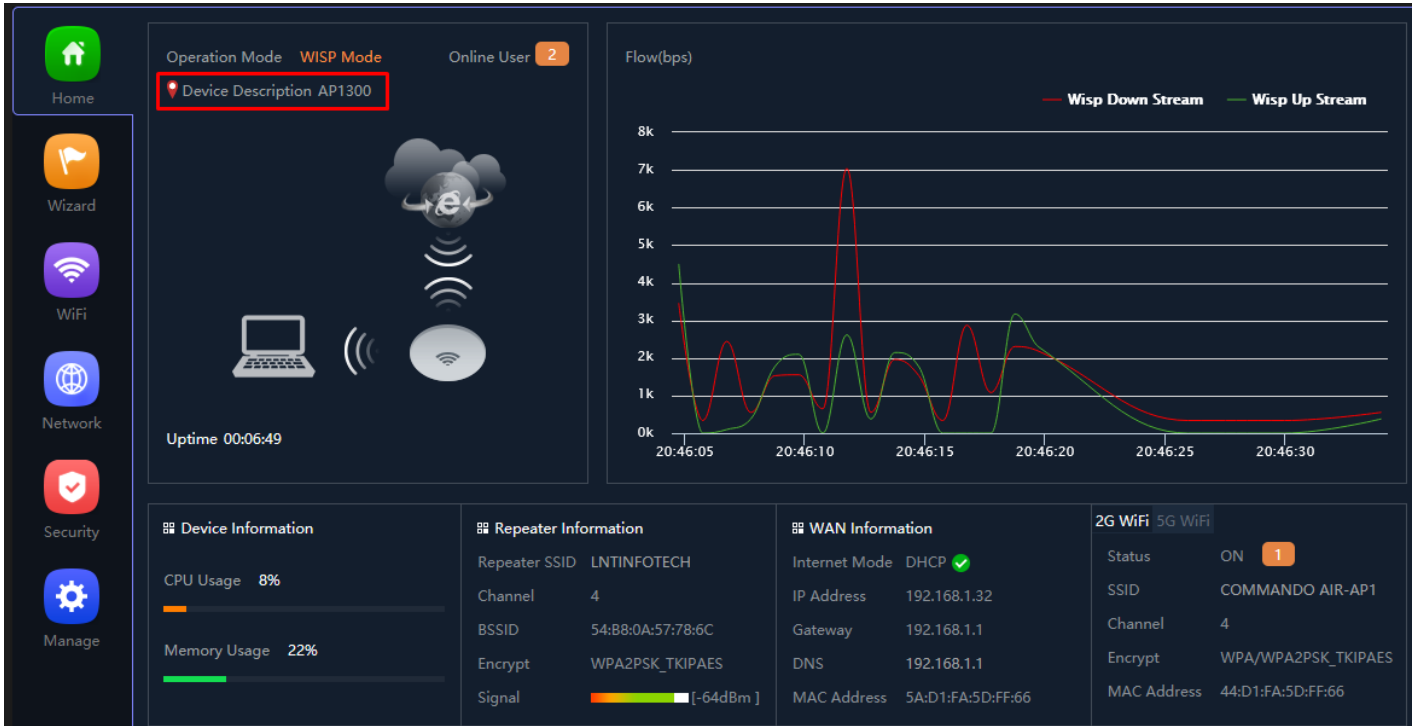

Fig 1.1.4 New Device Description of AirONE AP1300

1.2 LAN/WAN Information

In LAN Information you can find the IP Mode, LAN IP, Subnet, Gateway and MAC Address. In WAN Information like WAN IP address, Gateway, DNS and MAC Address.

LAN Information

IP Mode	Static IP
Lan IP	192.168.188.253
Subnet	255.255.255.0
Gateway	192.168.188.1
MAC Address	44:D1:FA:30:65:A1

Fig 1.2.1 LAN information of AirONE AP1300

WAN Information

Internet Mode	DHCP 
IP Address	192.168.1.39
Gateway	192.168.1.1
DNS	192.168.1.1
MAC Address	5A:D1:FA:30:65:A3

Fig 1.2.2 WAN information of AirONE AP1300

1.3 Wi-Fi Information

In Wi-Fi Information, Status along with number of client connected to AP, SSID, Channel used, Encryption and MAC Address of AP is shown.

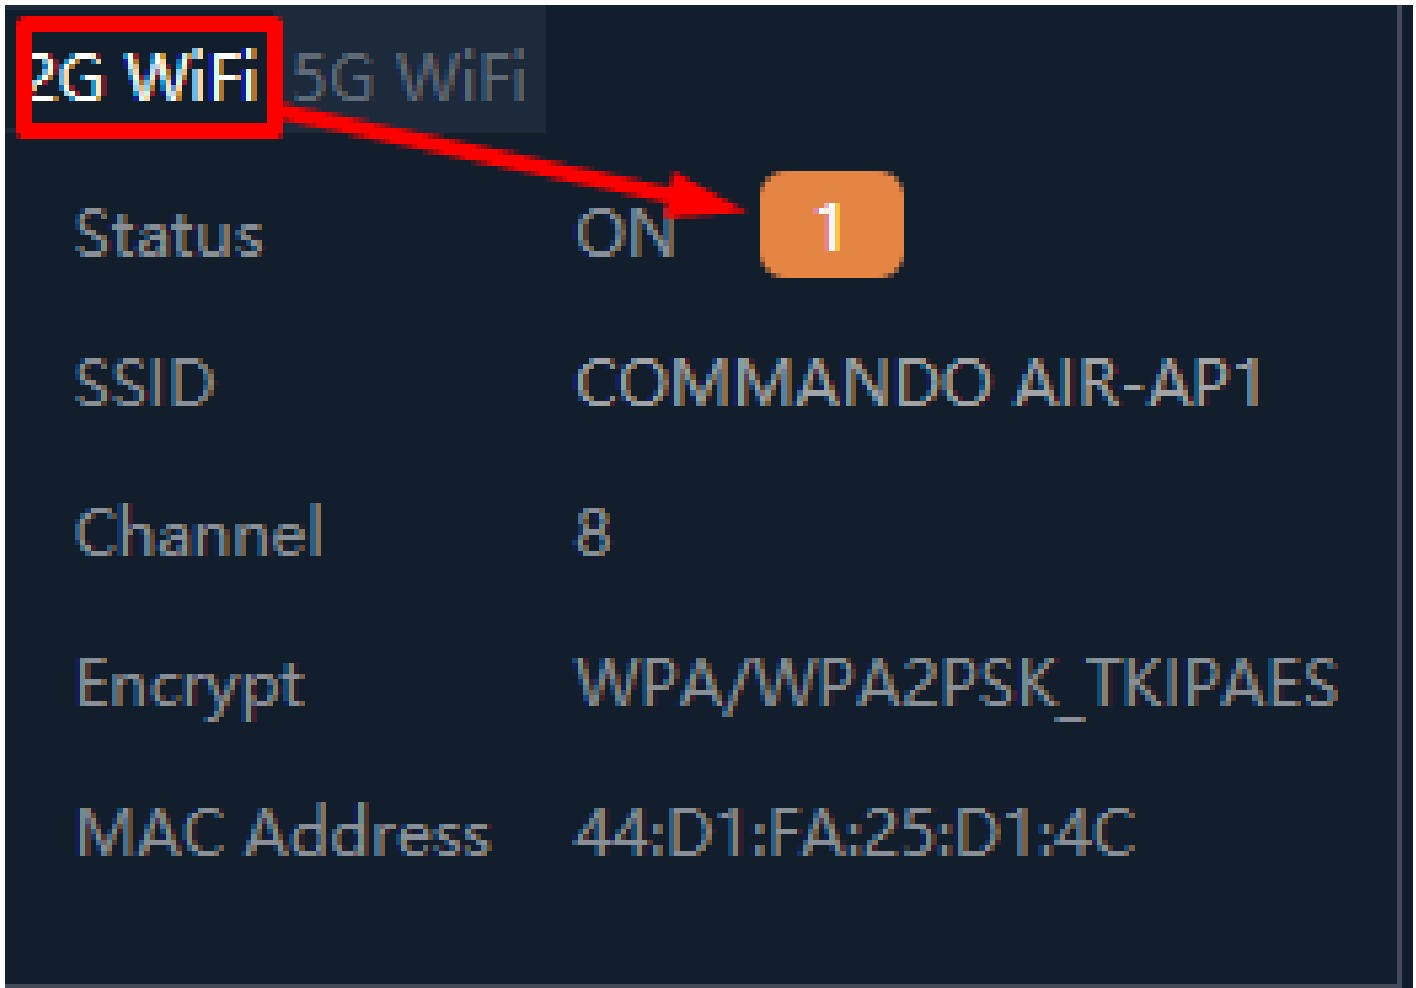

Fig 1.3.1 Wi-Fi Information of 2G Wi-Fi AirONE AP1300

Fig 1.3.2 Wi-Fi Information of 5G Wi-Fi AirONE AP1300

1.4 Clients List

Clients list along with number of clients connected to AP, MAC address of clients connected, Signal strength of clients' connection along with connection time is shown. We can learn about users in network with all vital information.

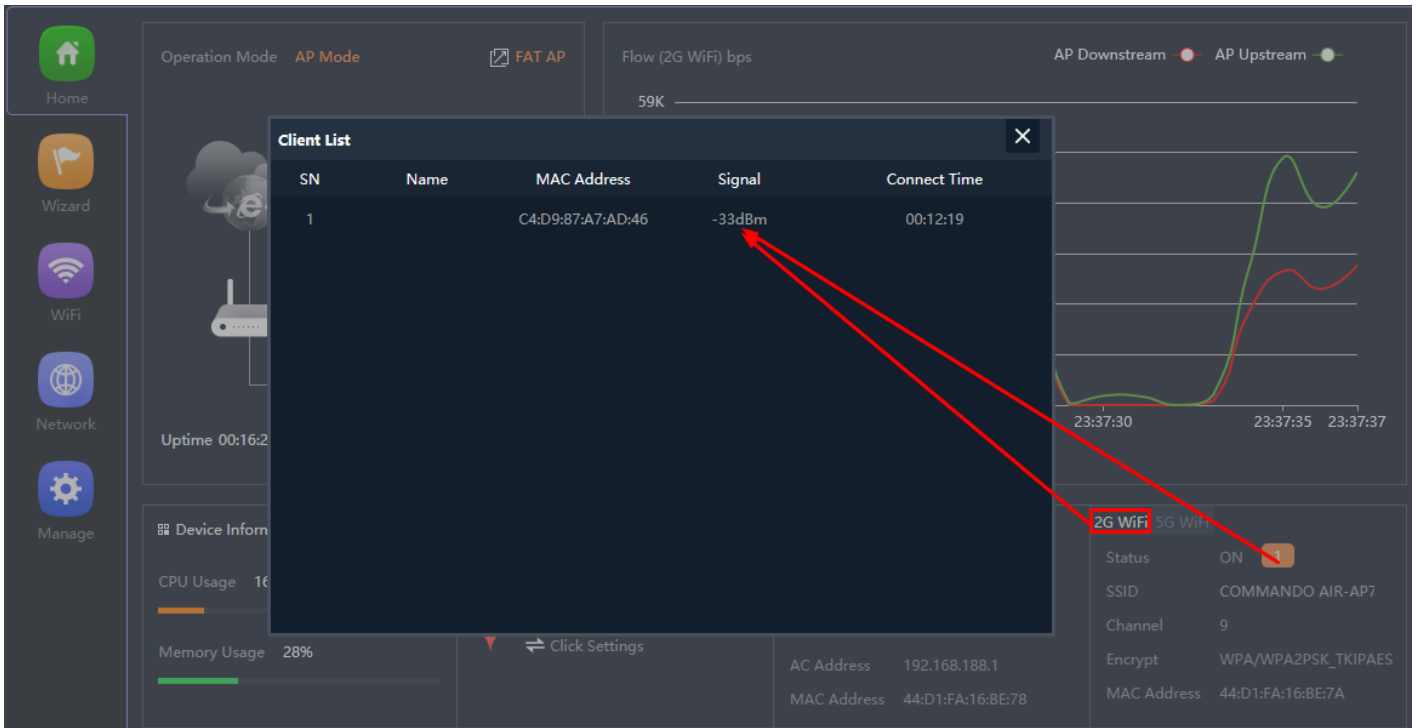

Fig 1.4.1 Clients list of 2G Wi-Fi AirONE AP1300

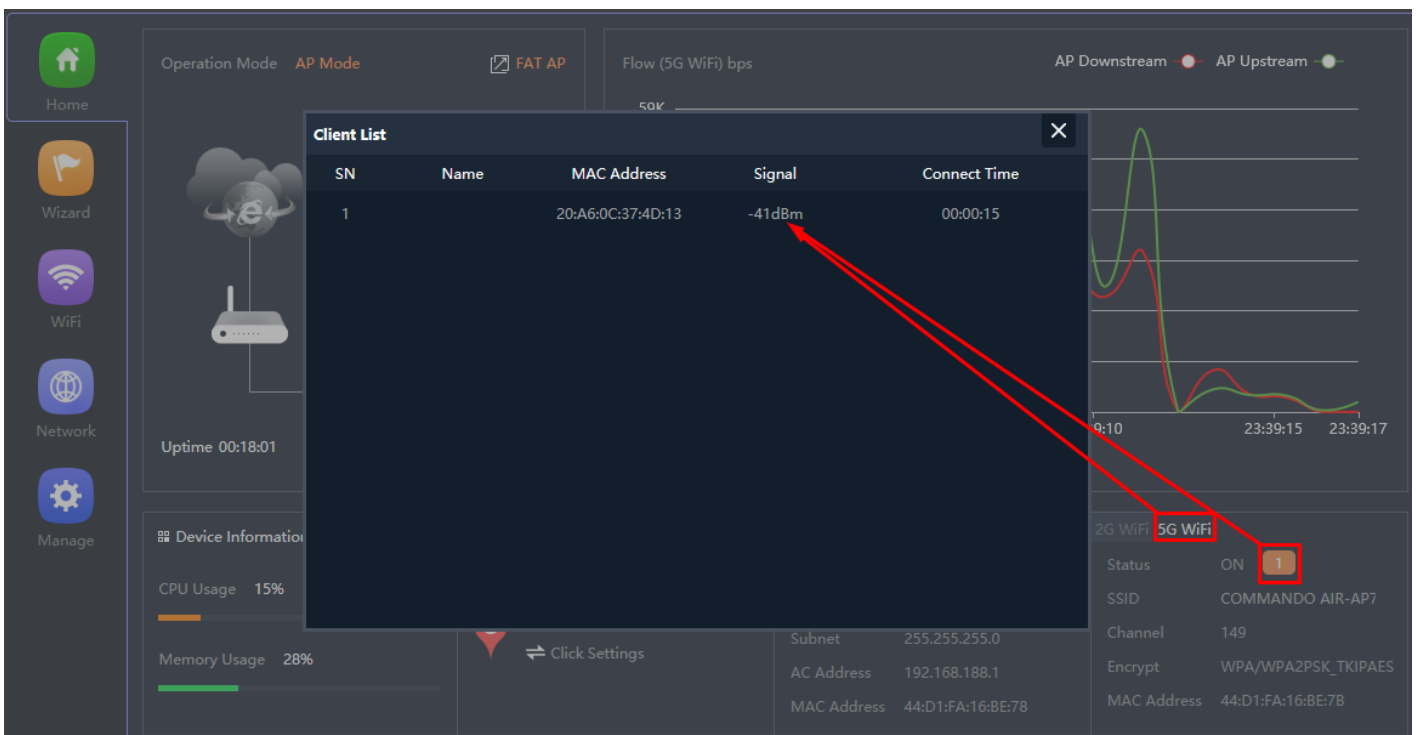

Fig 1.4.2 Clients list of 5G Wi-Fi AirONE AP1300

1.5 Operation Mode configuration

Default operation is Fat AP where it integrates the WLAN physical layer functions, service data encryption, user authentication, QoS, network management, roaming technologies, and application layer functions. It can provide wireless access independently. Each AP is an independent node. The channels and power on each AP are configured independently. All APs work independently and support advanced and independent

security policy.

A Fit AP has only Select the IP mode along with reset and reboot options.

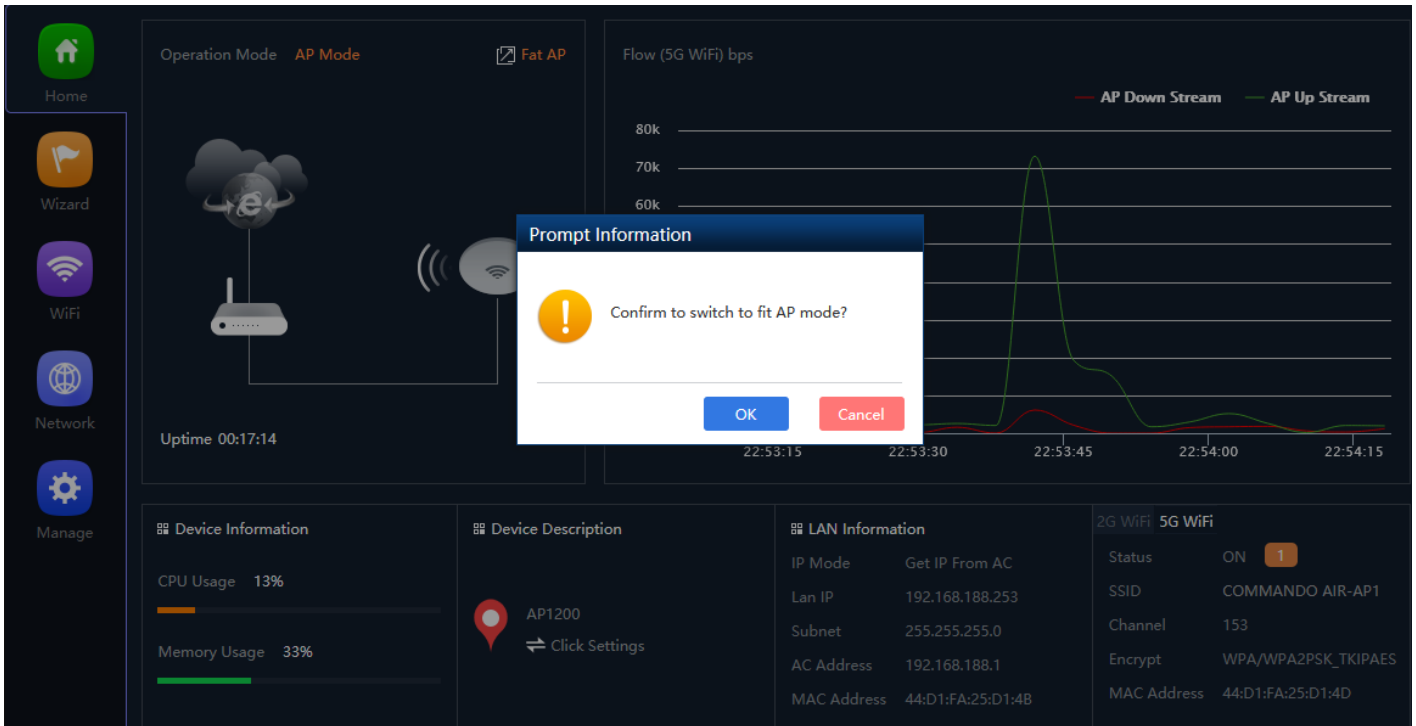

Fig 1.5.1 Fat AP mode of AirONE AP1300

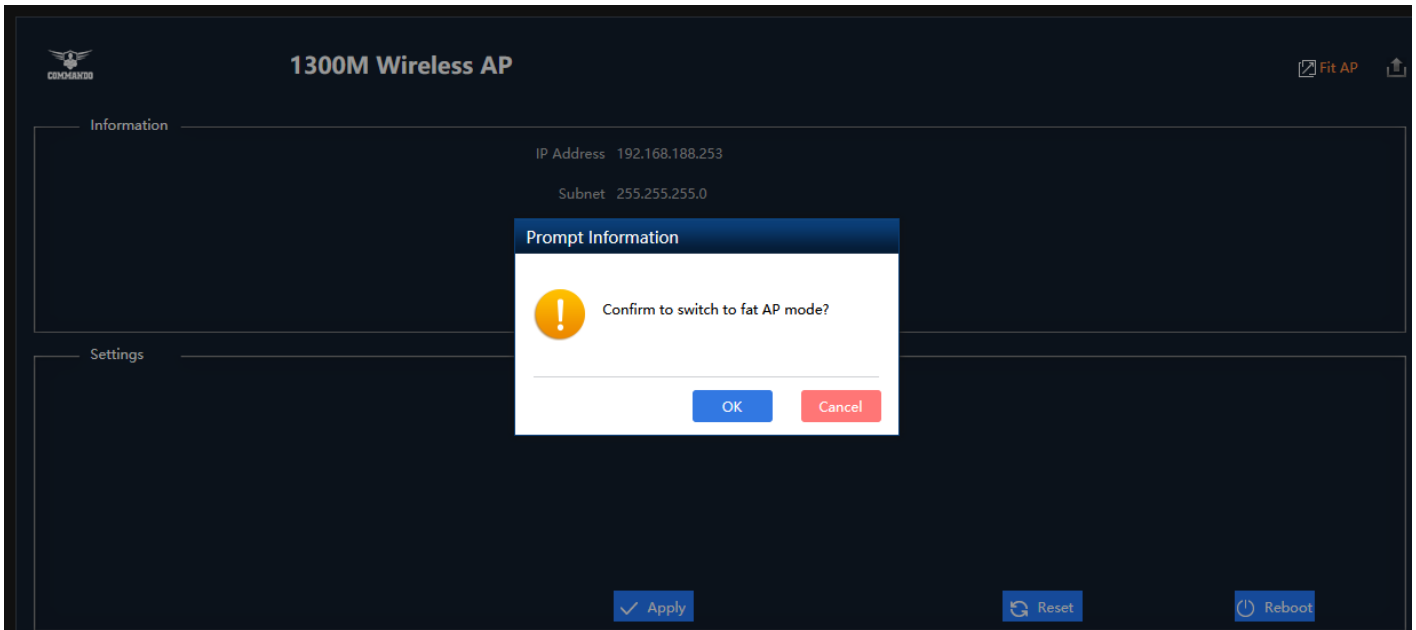

Fig 1.5.4 Switching mode to Fat AP of AirONE AP1300

1.6 AP UP/Downstream Flow (2G Wi-Fi) bps

In Flow (2G/5G Wi-Fi) bps you can monitor the AP's Upstream and Downstream bandwidth in bps.

Fig 1.6.1 Flow (2G Wi-Fi) bps of AirONE AP1300

Fig 1.6.2 Flow (5G Wi-Fi) bps of AirONE AP1300

WIZARD

After clicking Wizard page, you can set device in Gateway Mode, Repeater Mode, WISP and AP Mode (Default Selection). It provides flexibility to configure wireless AP's operation mode based on network scenario making this AP future proof. You are required to select corresponding operation mode first before starting the configuration. Clicking Wizard will pop up following page to configure the operation mode along with photos with explanation for each operation mode.

Gateway Mode:

In Gateway mode, all Ethernet are bridged together, and wireless clients will connect ISP access point or router connecting directly to the Internet via WAN PORT. NAT is enabled and PCs in Ethernet LAN port share the same IP to ISP through wireless LAN.

Repeater Mode:

In Repeater mode is used to extend the range of wireless coverage of existing Wi-Fi network. This mode is suitable when you are in a Wi-Fi dead-zone or a place with weak wireless signal, and you want to have a larger effective range of the wireless signal throughout your home or office.

WISP Mode:

In WISP mode, the device connects to ISP station or hot spot wirelessly to share network with local wired and wireless devices.

AP Mode:

In AP mode, the device works as an access point to transform your existing wired network into a wireless network.

2.1 Gateway Mode

In Gateway mode, your internet provider's RJ-45 is connected to WAN port of AP1300. Internet provider WAN setting can have Static IP, PPPoE, or DHCP accordingly select option. Then configure the wireless parameters as per your choice of SSID, Channel width, Encryption and Time reboot if required.

Fig 2.1.1 Gateway mode of AirONE AP1300

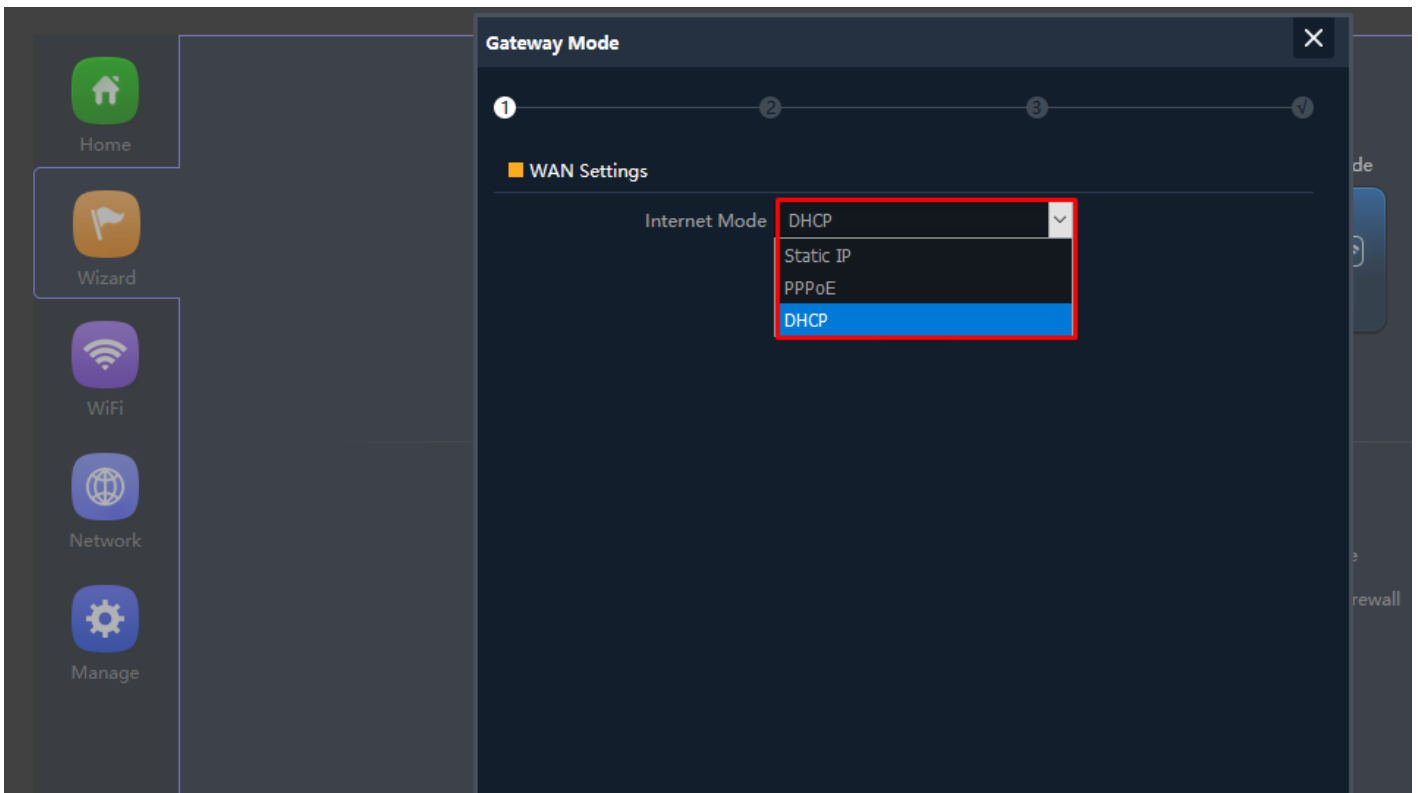

Fig 2.1.2 Gateway mode WAN Setting of AirONE AP1300

Note:

You can set SSID name and encryption and password as per requirement. Please turn ON Wi-Fi Status to make it active

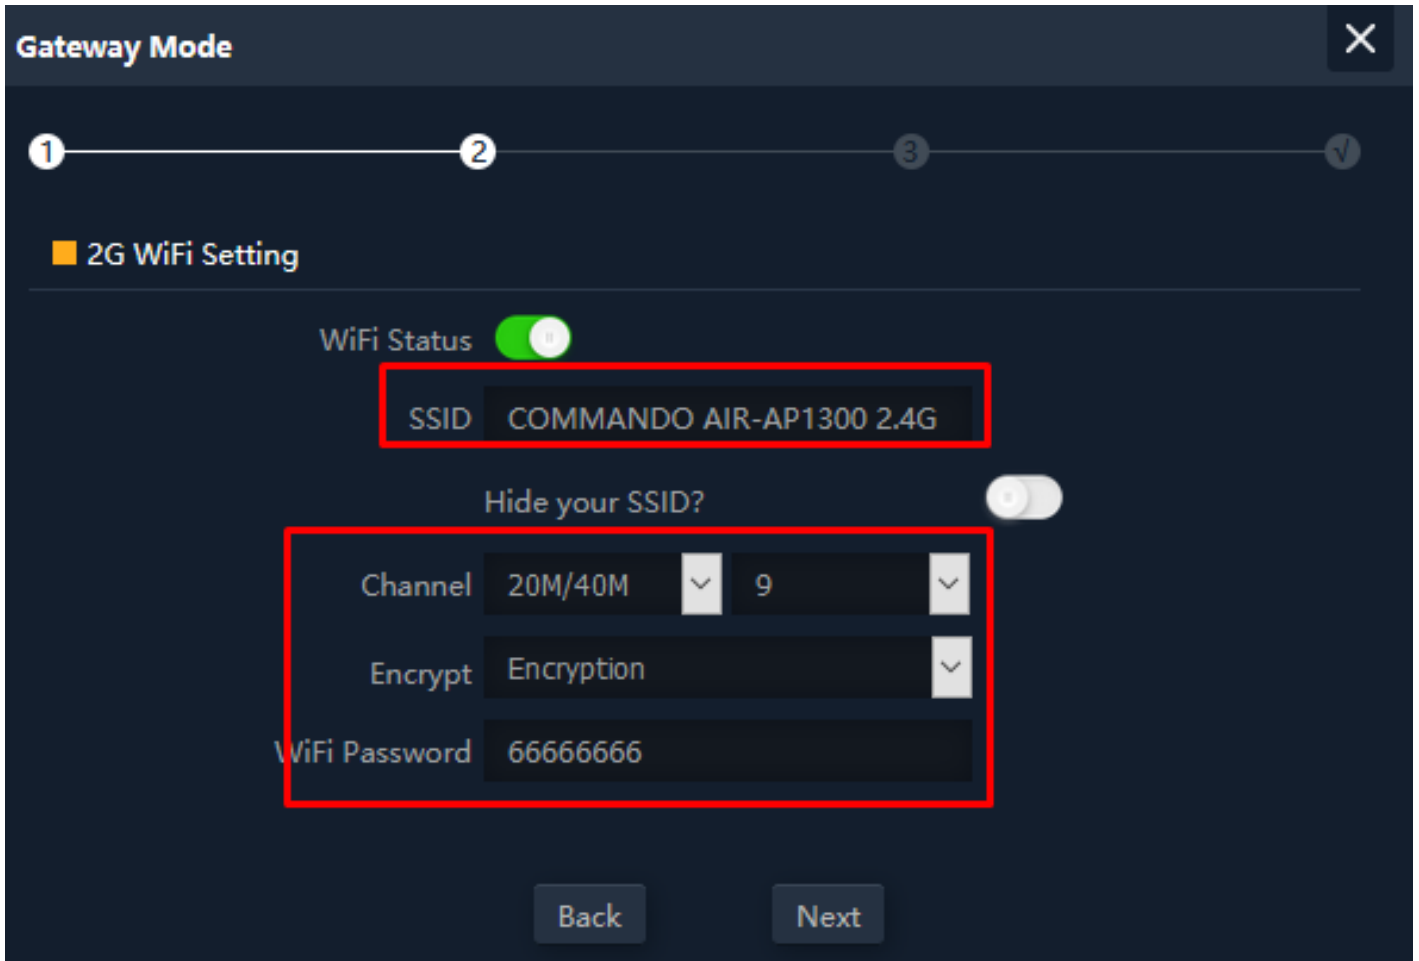

Fig 2.1.3 Gateway mode 2G Wi-Fi Setting of AirONE AP1300

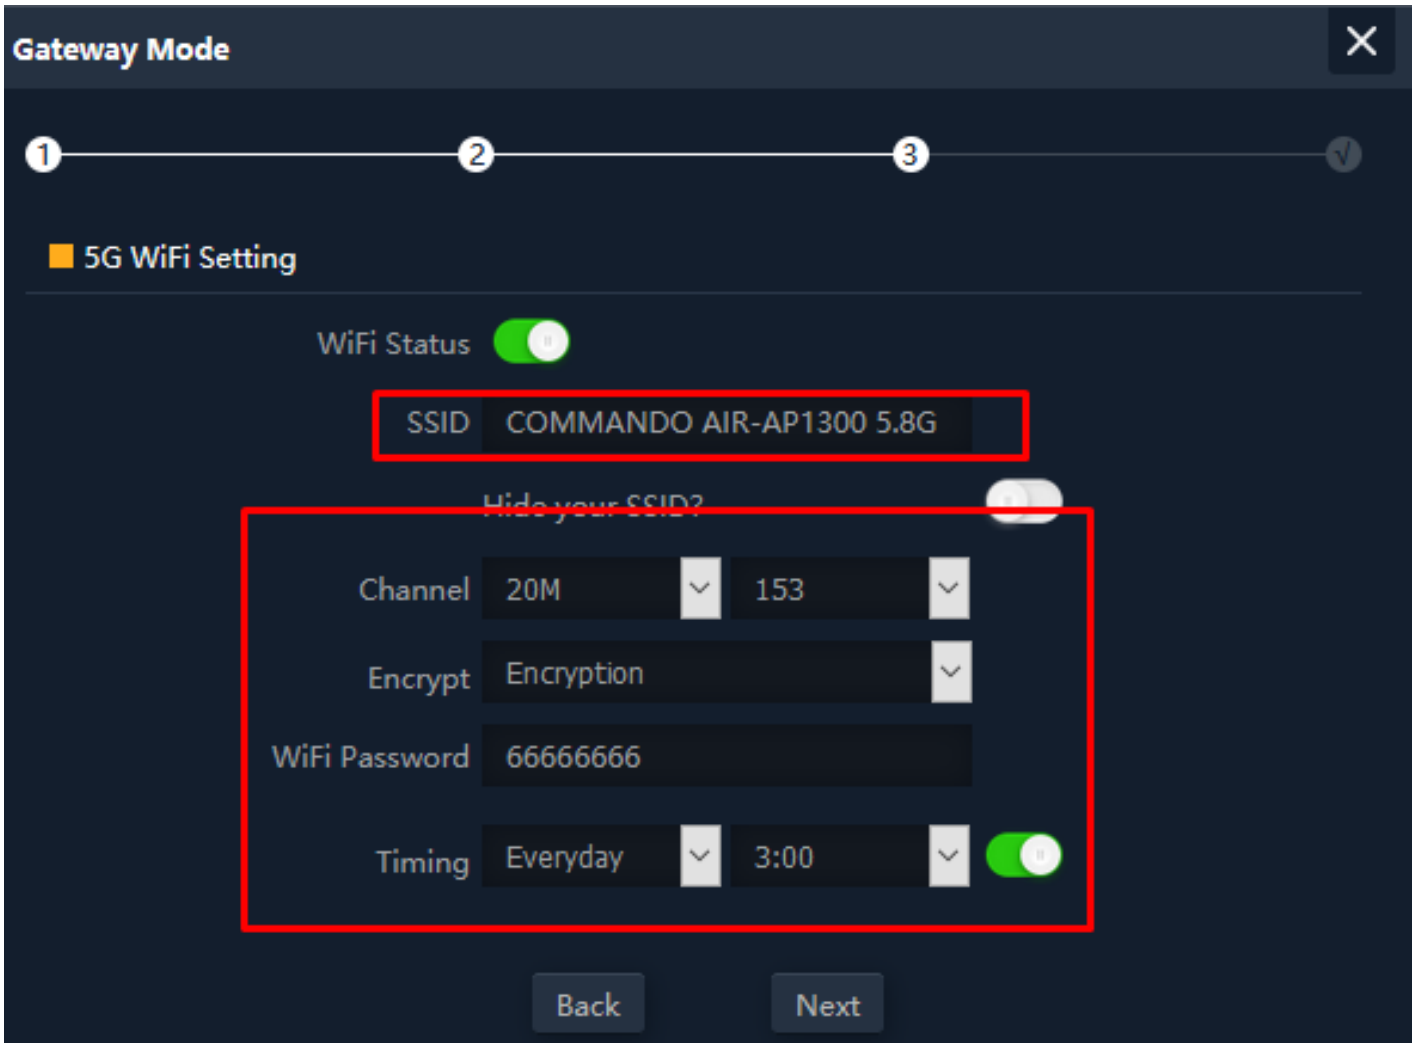

Fig 2.1.4 Gateway mode 5G Wi-Fi Setting of AirONE AP1300

Note: The device will restart for the changes to take effect for mode changes to Gateway mode.

Home page will show LAN, WAN, Wi-Fi, Device Information, along with operation mode shown as below.

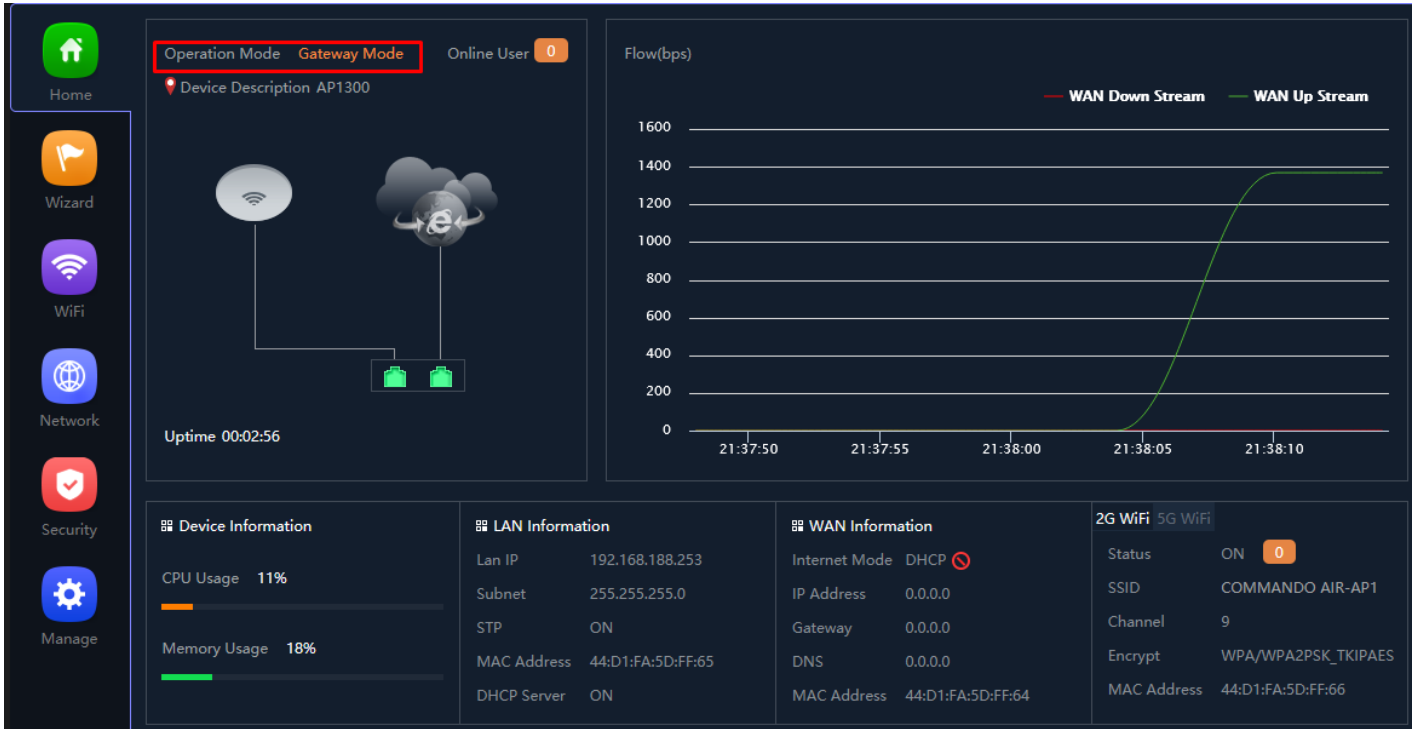

Fig 2.1.4 Gateway mode Home page of AirONE AP1300

2.2 Repeater Mode

In Repeater mode, Scan Repeater SSID whose password is known. Then configure the wireless parameters as per your choice of SSID, Channel width, Encryption and Time reboot if required.

Suggestion:

Just in case if you don't have any RJ 45 cable running to any room then In Repeater mode you have to just power on the device and wirelessly can connect to clients as well as ISP router (BSSID). No need of connecting physically LAN as well as WAN port. So, can help to make auditorium online without any cabling.

Fig 2.2.1 Repeater mode of AirONE AP1300

Note:

The device will restart for the changes to take effect for mode changes to Repeater mode.

Home page will show LAN, Repeater, Wi-Fi, Device Information, along with operation mode shown as below.

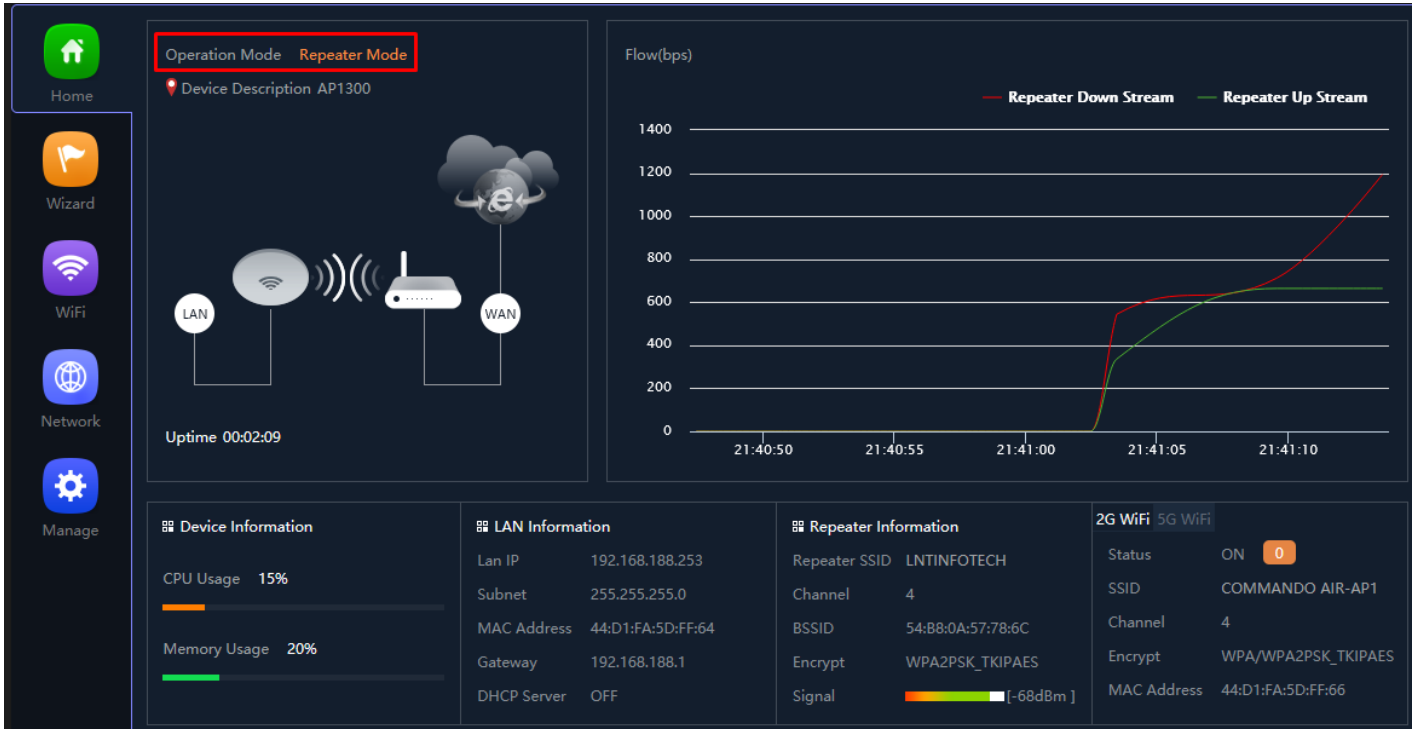

Fig 2.2.6 Repeater mode Home page of AirONE AP1300

2.3 WISP Mode

In WISP mode, Scan Repeater SSID whose password is known and configure WAN setting. Then configure the wireless parameters as per your choice of SSID, Channel width, Encryption and Time reboot if required.

Note:

Just in case if you don't have any RJ 45 cable running to any room then In WISP mode you have to just power on the device and wirelessly can connect to clients as well as ISP router (BSSID). No need of connecting physically LAN as well as WAN port. So, can help to make auditorium online without any cabling.

You can set SSID name and encryption and password as per requirement. Please turn ON Wi-Fi Status to make it active

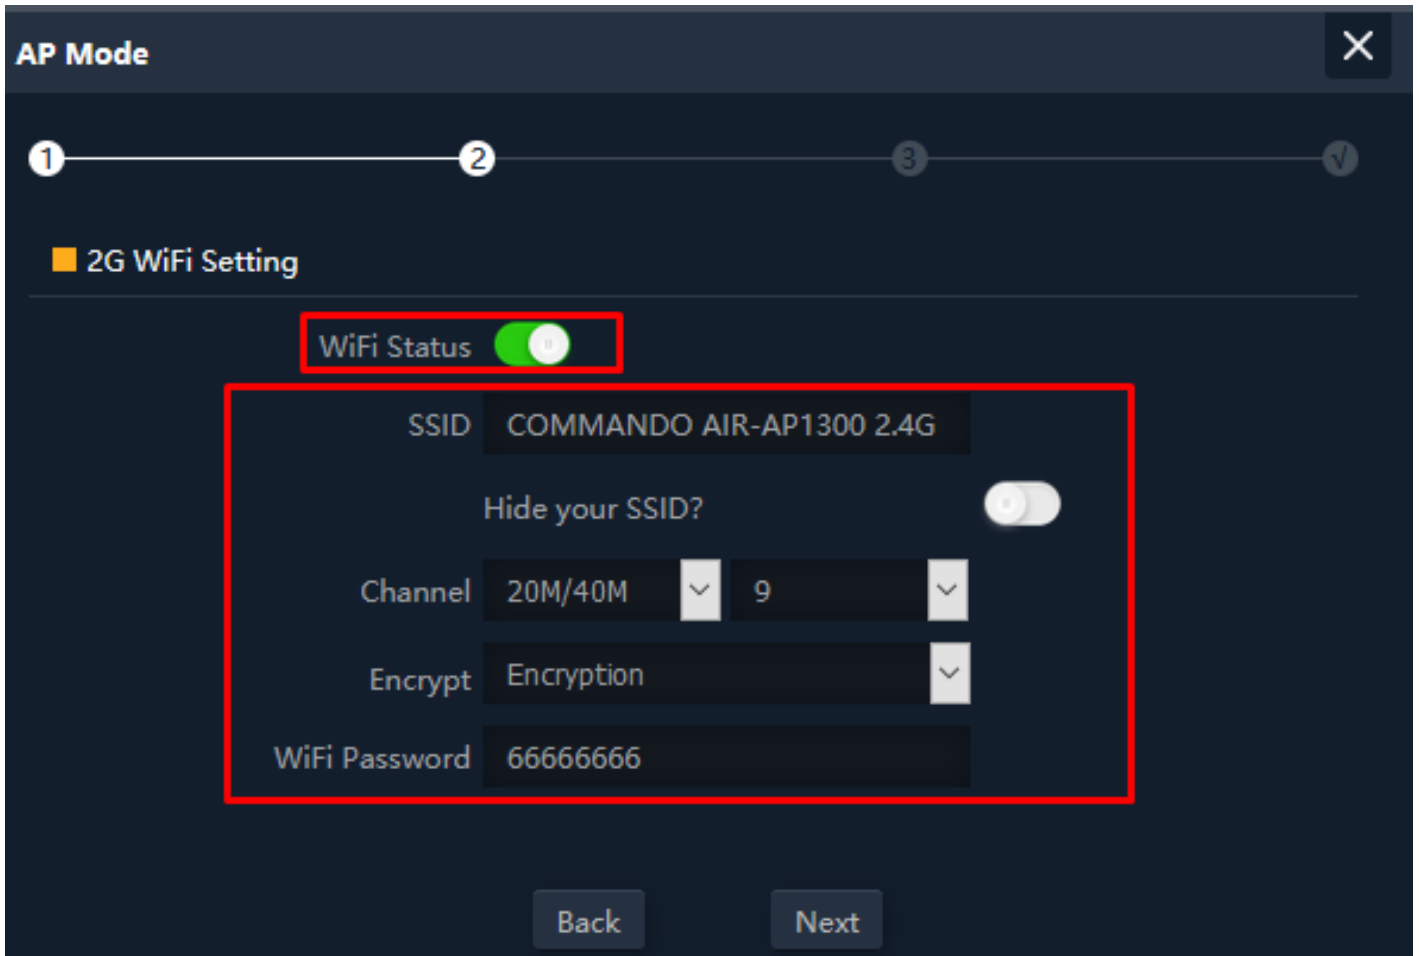

Fig 2.4.3 Setting 2G Wi-Fi for AP mode of AirONE AP1300

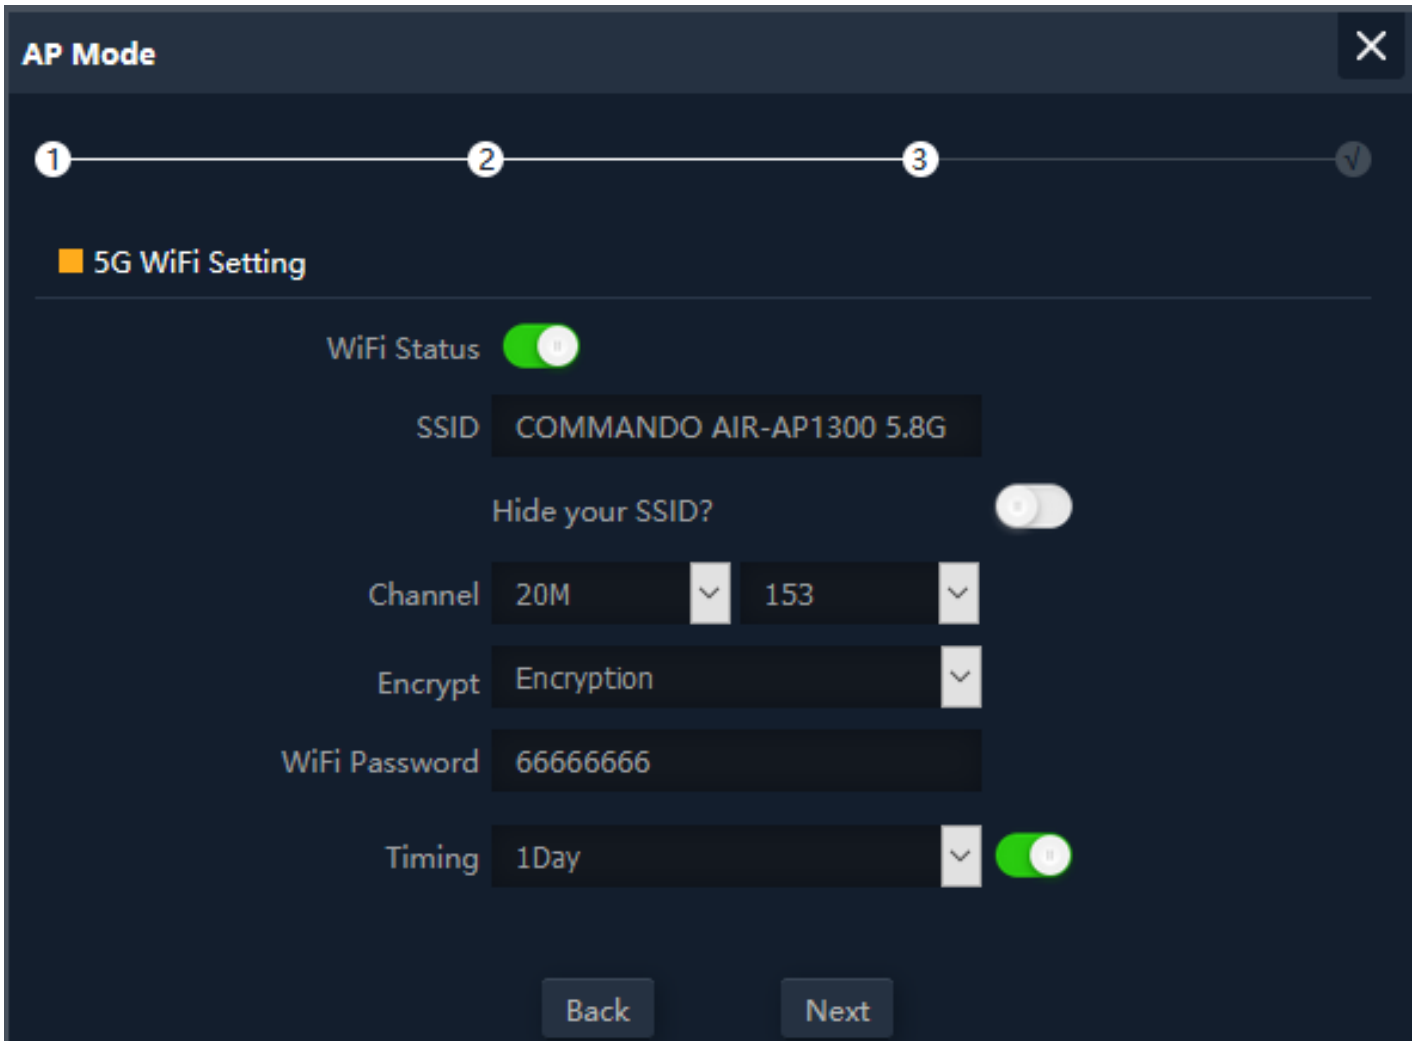

Fig 2.4.4 Setting 5G Wi-Fi for AP mode of AirONE AP1300

Note:

The device will restart for the changes to take effect for mode changes to AP mode.

Home page will show LAN, Repeater, Wi-Fi, Device Information, along with operation mode shown as below.

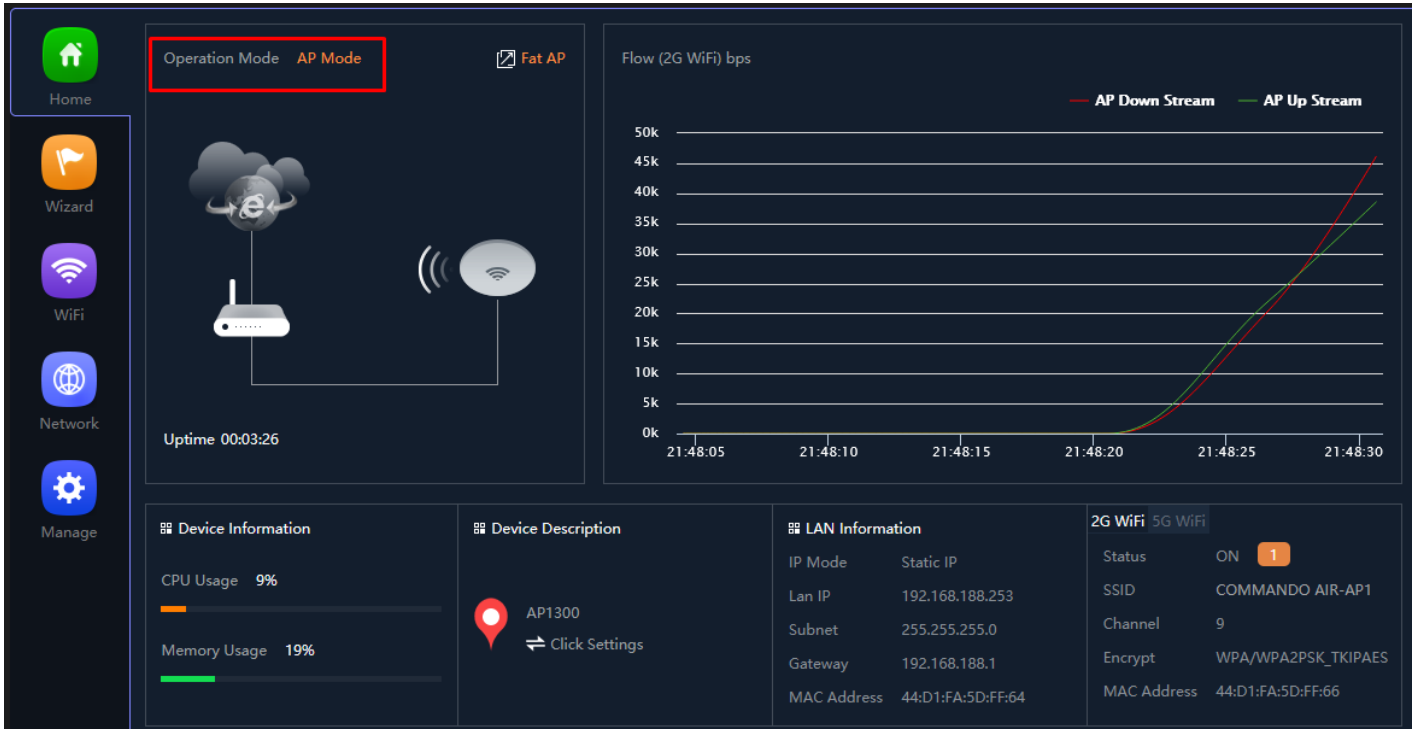

Fig 2.4.5 Home page after setting AP mode of AirONE AP1300

WI-FI

In Wi-Fi setting you can set the 2.4G/5.8G Wi-Fi setting, MAC ACL, Repeater, Wi-Fi Timer off and Advanced settings.

2G/5G Wi-Fi Settings:

Can set Multi SSID in 2G/5G band along with Basic SSID all other VAP 1, VAP 2, VAP 3 SSID can be set. You can ON/OFF particular SSID with this setting.

Repeater Settings:

Repeater can be turn ON or OFF. Selecting scanning repeater SSID with lock BSSID and password and encryption setting.

MAC ACL Settings:

Can allow and prohibit wireless clients based on MAC address.

Wi-Fi Timer Settings:

Wi-Fi Timer ON/OFF along with setting Time Frame.

Advanced Settings:

In Advanced setting can set Country Region, 2G/5G Mode, Multicast Fast, Maximum wireless clients, WLAN Partition, Short GI, Coverage Threshold and Transmit Power

Note:

All *italic config* options are only available in WISP and Gateway mode only.

3.1 2G/5G Wi-Fi Setting

We can set 2.4G/5.8G Wi-Fi with Basic Setting along with Virtual AP setting. You can enable or disable Wi-Fi by

Wi-Fi Status: On mean SSID is available for wireless clients.

Wi-Fi Status: Off mean SSID not available.

Note:

By default, Basic Wi-Fi SSID “COMMANDO AIR-AP1300 2.4G” and “COMMANDO AIR-AP1300 5.8G” is turned ON.

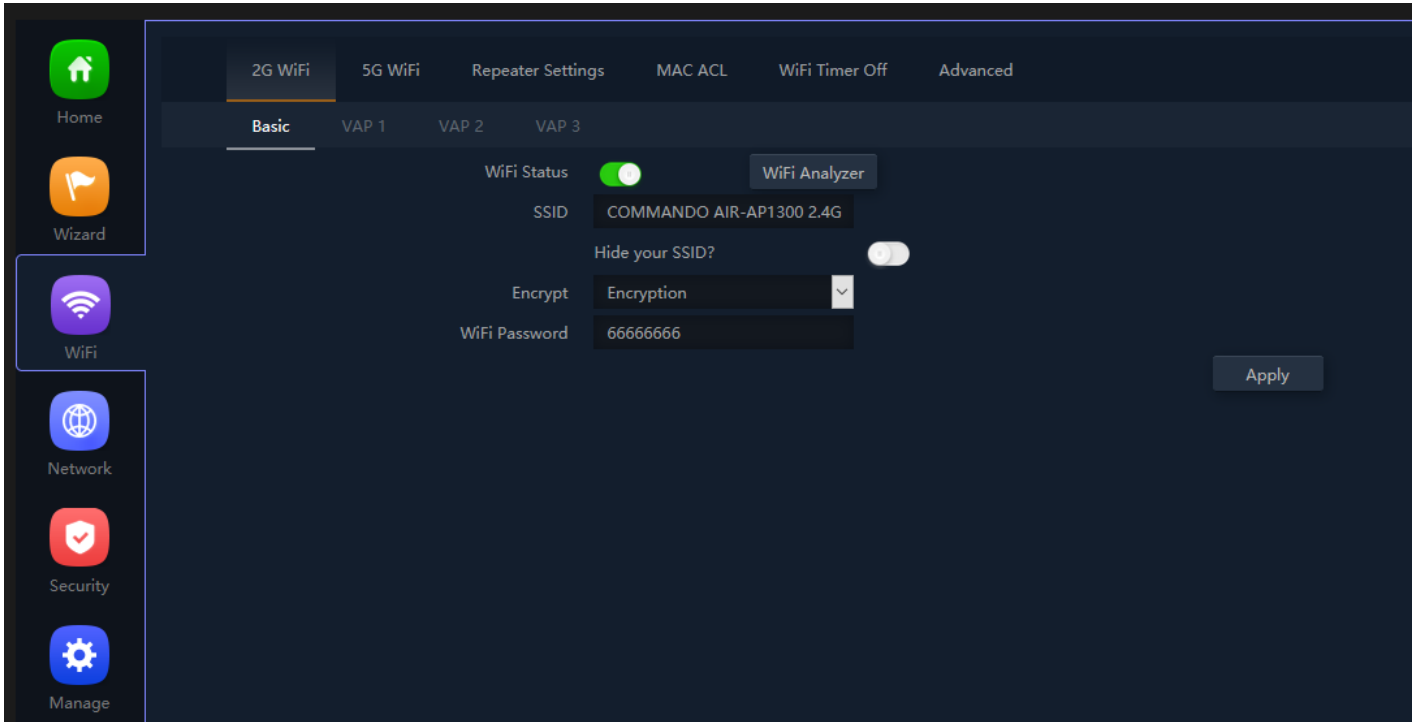

Fig 3.1.1 2G Wi-Fi enable and disable of Basic and VAP 1,2,3 of AirONE AP1300

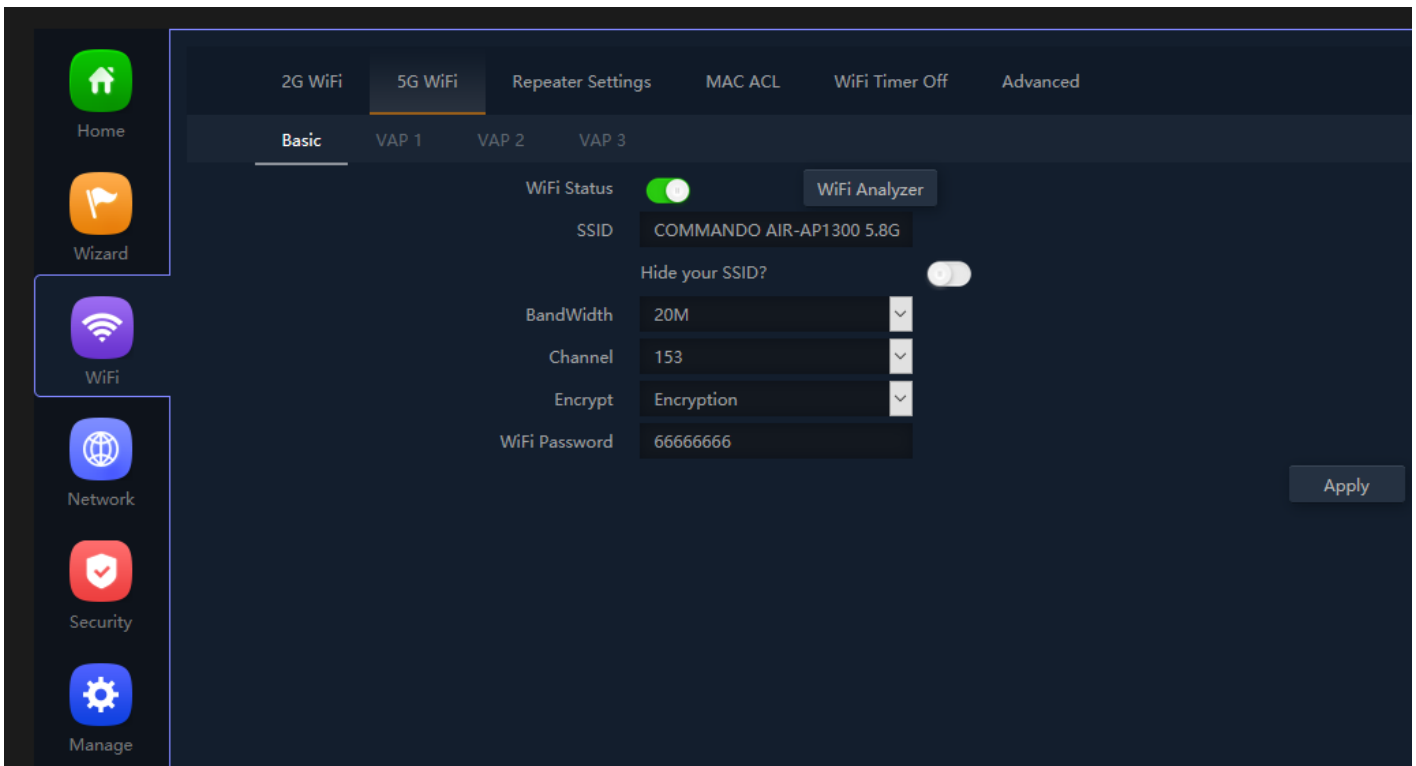

Fig 3.1.2 5G Wi-Fi enable of AirONE AP1300

Wi-Fi Analyzer is a handy tool which helps you to select a better channel and mainly to analyze the AP's signal strength and channel, to make user more easy to choose the channel with less Wireless Interference.

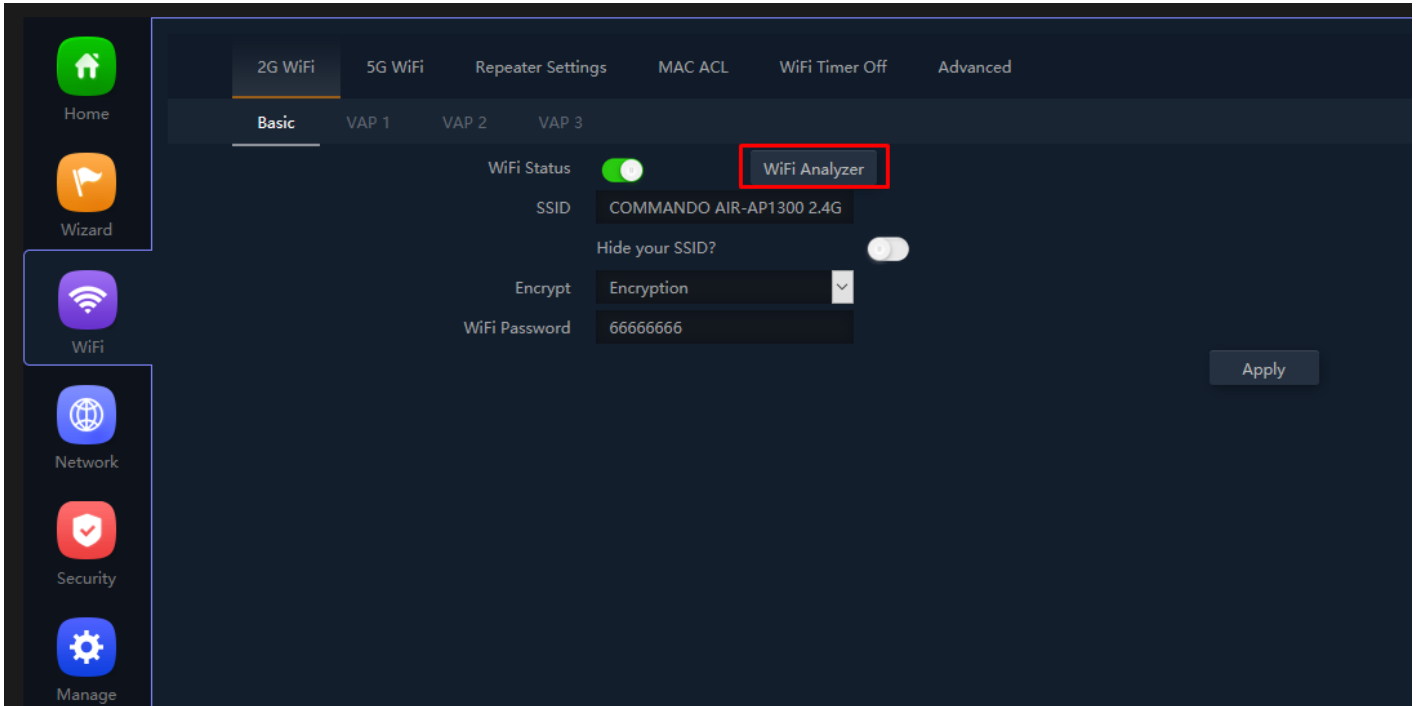

Fig 3.1.3 2G Wi-Fi Analyzer button of AirONE AP1300

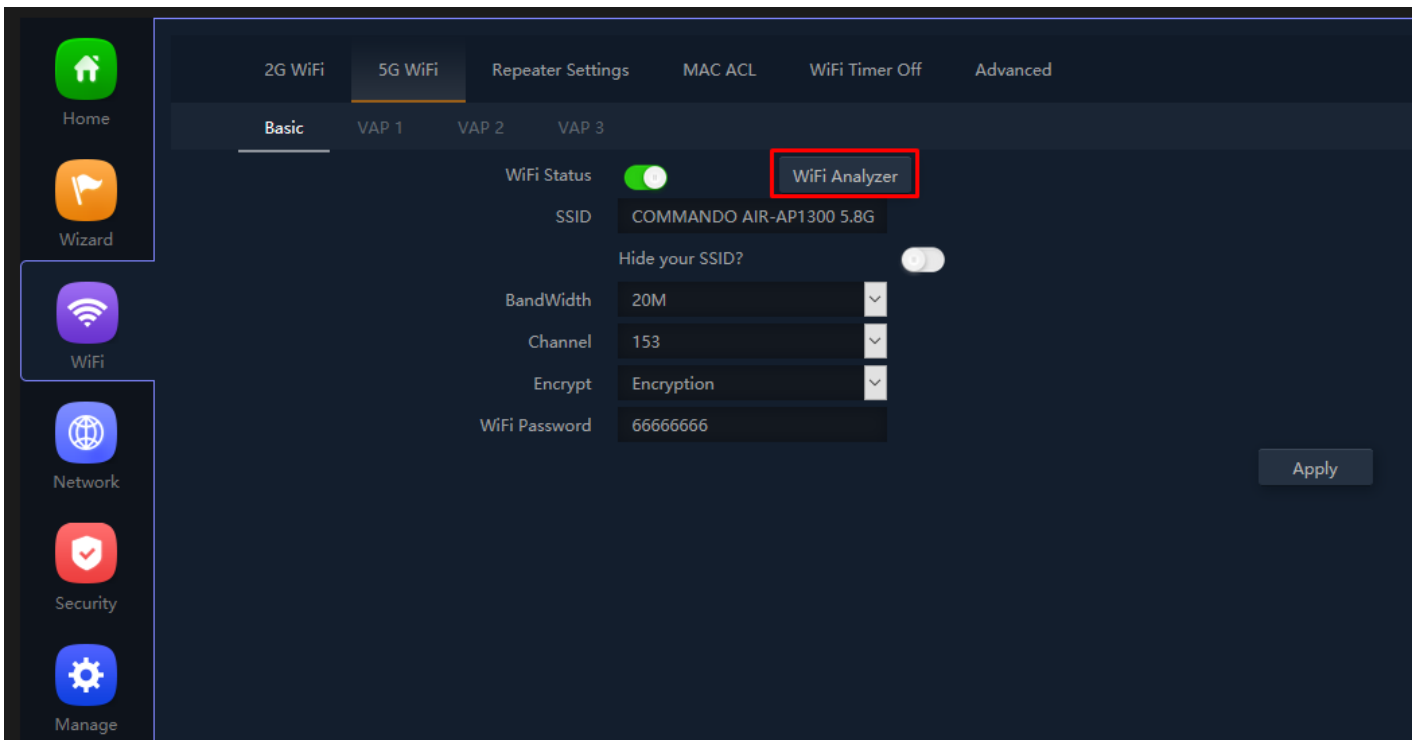

Fig 3.1.4 5G Wi-Fi Analyzer button of AirONE AP1300

Fig 3.1.5 2G Wi-Fi Analyzer of AirONE AP1300

Fig 3.1.6 5G Wi-Fi Analyzer of AirONE AP1300

Note: Red line denote channel used and signal strength available. This AP has very strong signal and coverage than all peer top brand AP.

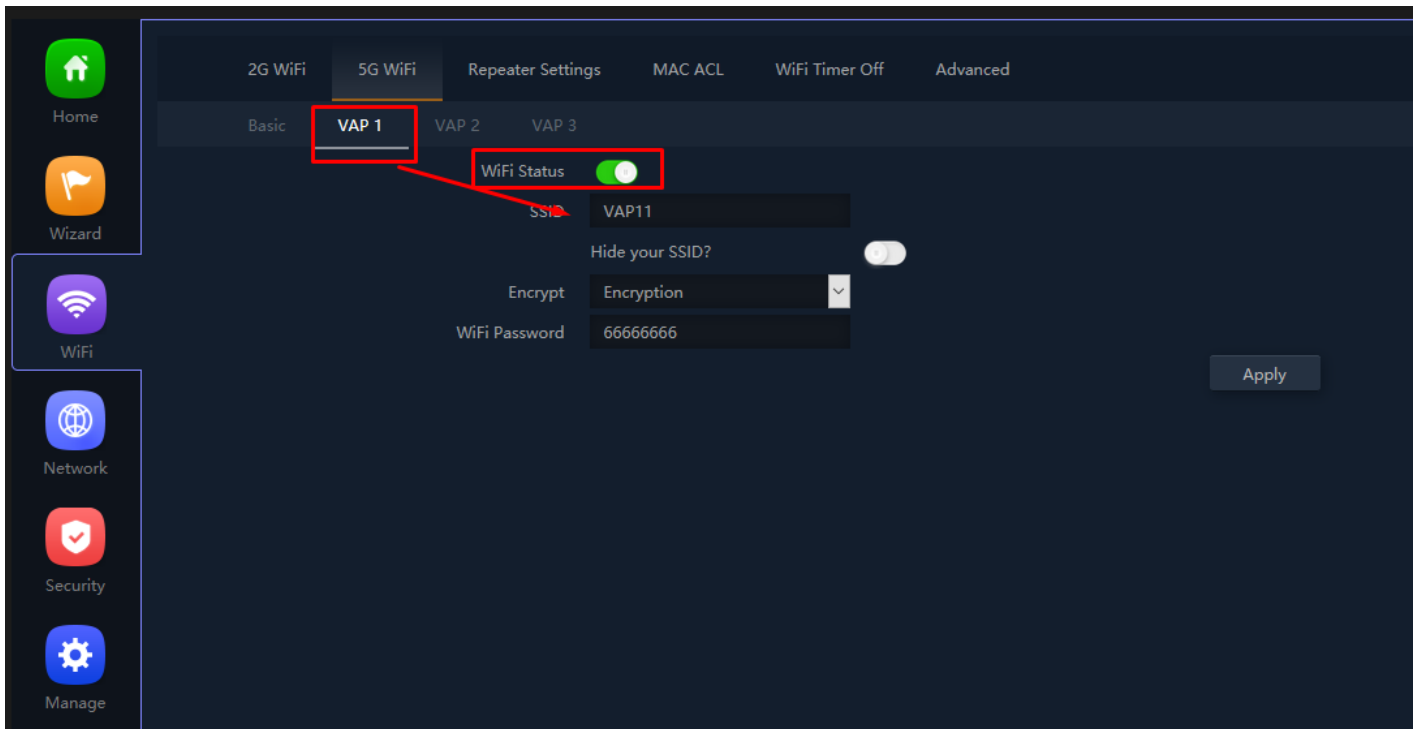

Fig 3.1.7 Enabling 2G VAP 1 of AirONE AP1300

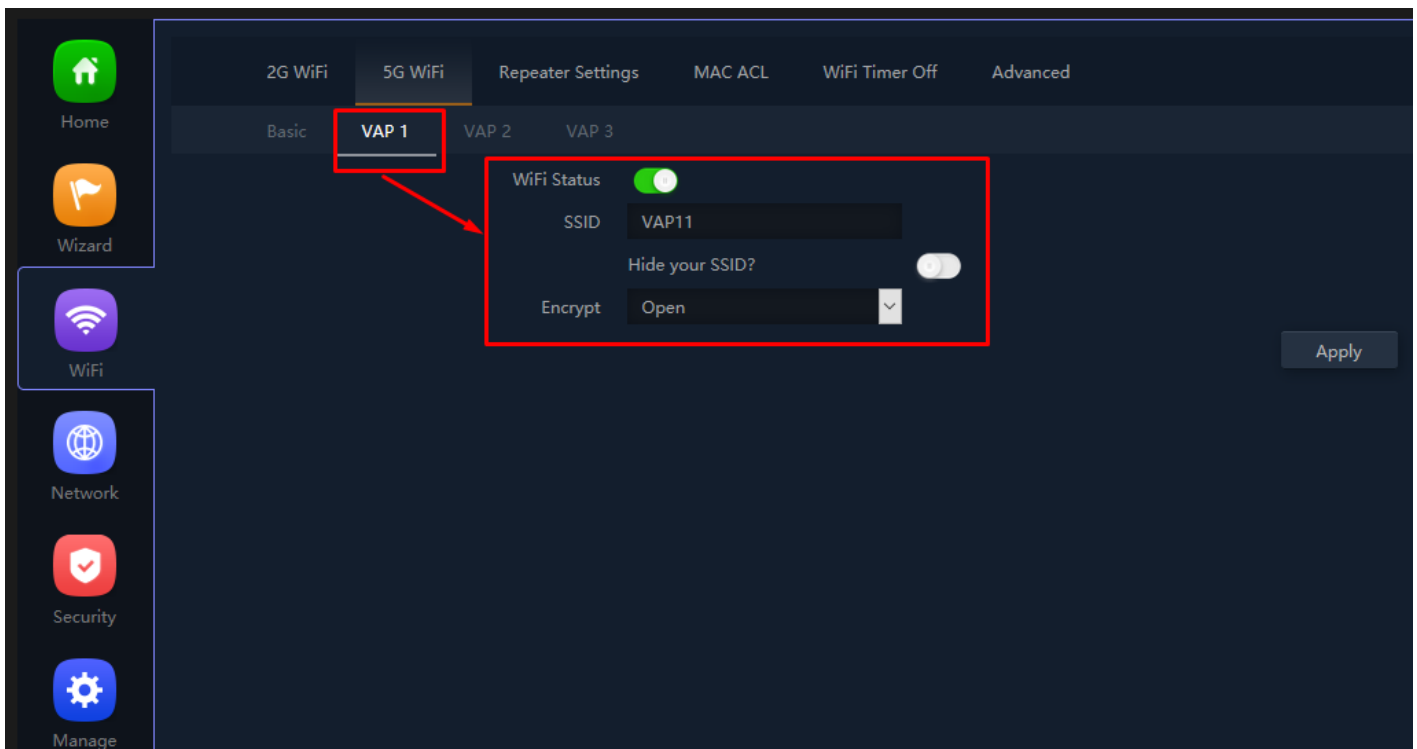

Fig 3.1.8 Enabling 5G VAP 1 of AirONE AP1300

Note:

You can change All SSID name, Encryption and Wi-Fi password as per your choice to be used by wireless clients.

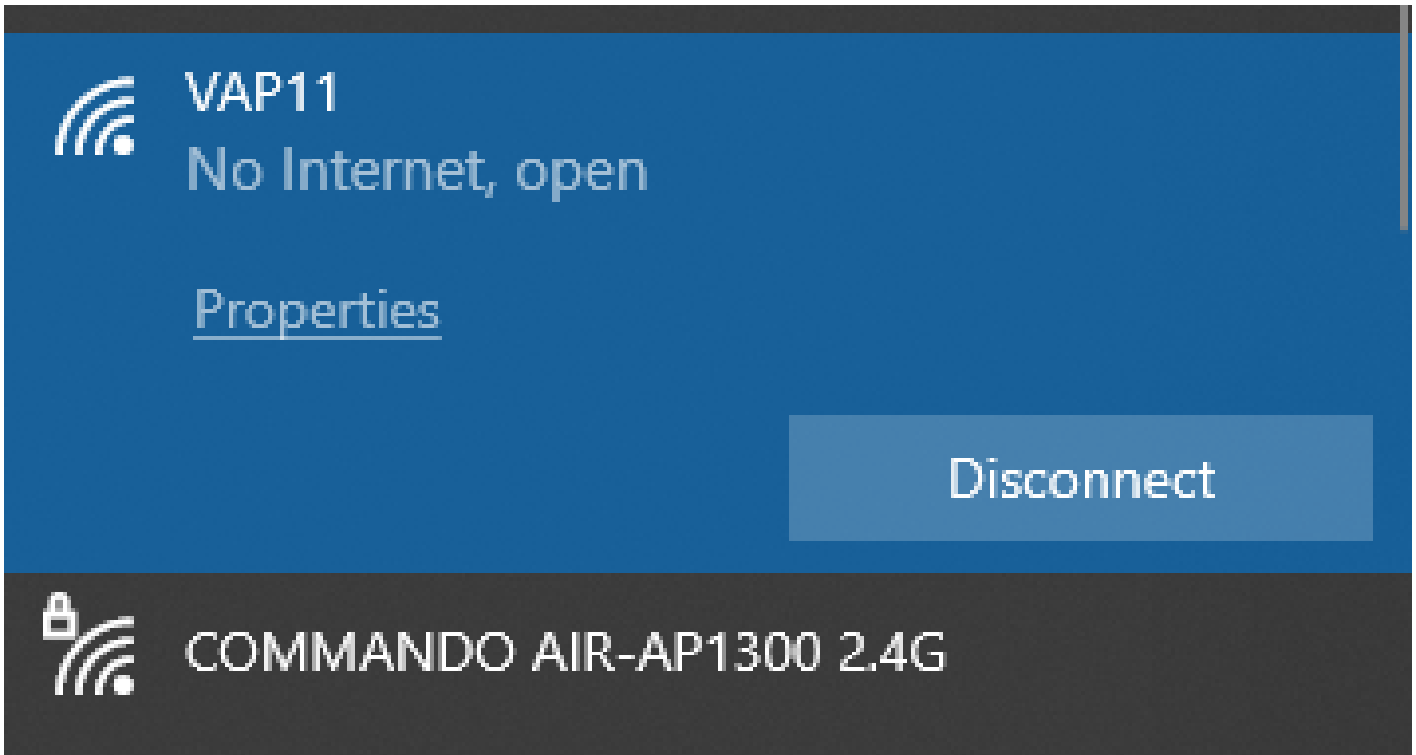

Fig 3.1.9 Wireless VAP 1 available for clients

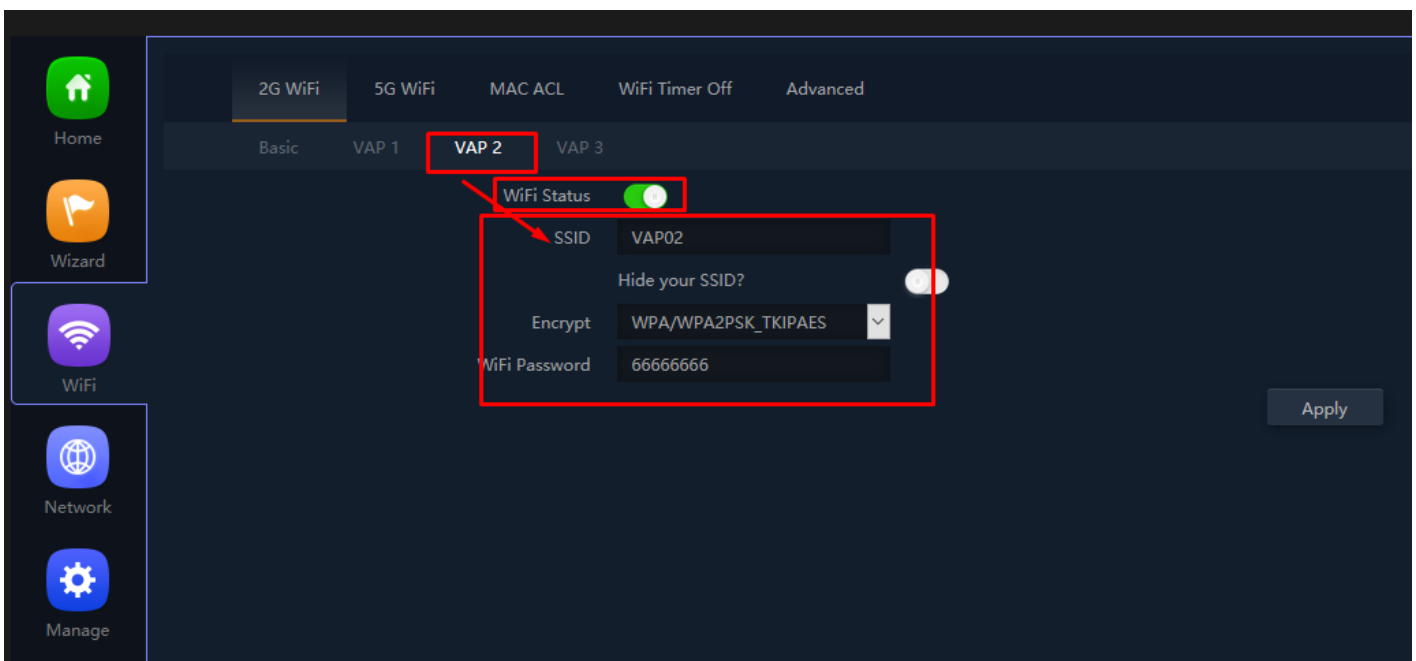

Fig 3.1.10 Enabling 2G Wi-Fi VAP 2 of AirONE AP1300

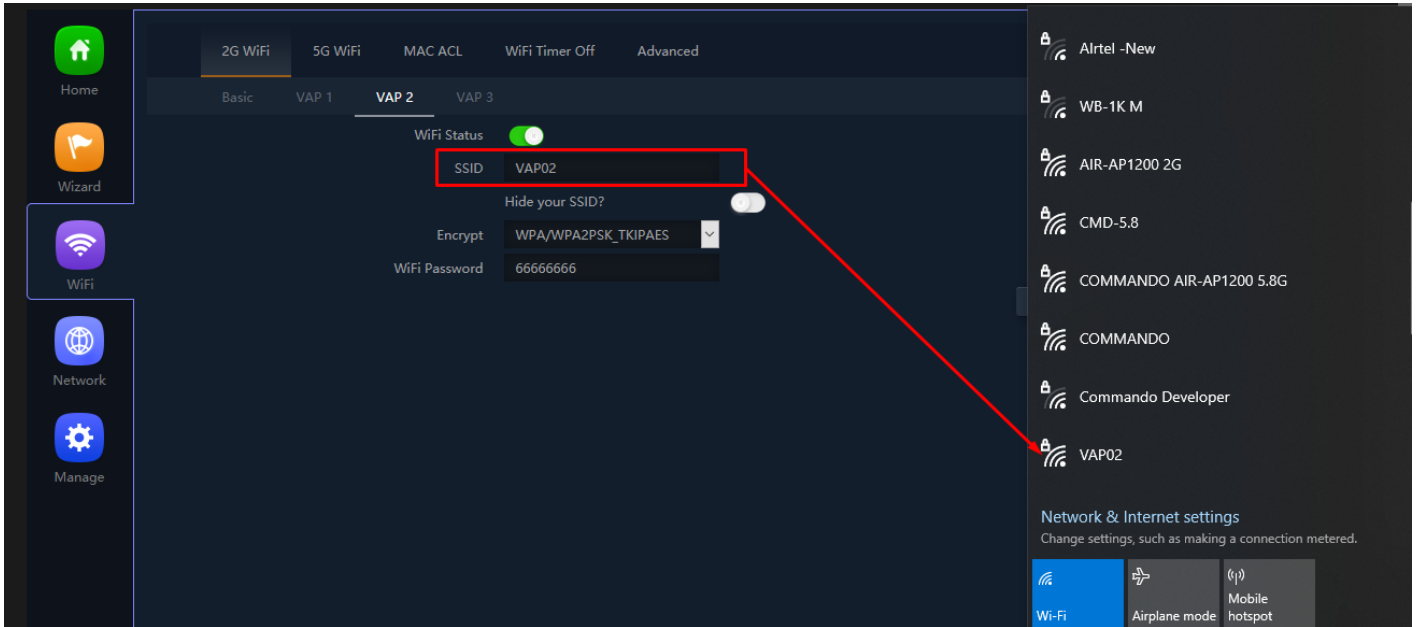

Fig 3.1.11 Wireless VAP 2 named COMMANDO of AirONE AP1300

Note:

You can have Multi SSID up to 8 configured on AirONE AP1300. All SSID will use same channel in 2G and 5G band and channel width as set in Basic SSID but each Virtual Access Point (VAP) can set different name, encryption and password.

3.2 Repeater Settings

Repeater Settings like scan Repeater SSID, Encryption, Password of scan SSID and bandwidth can be set.

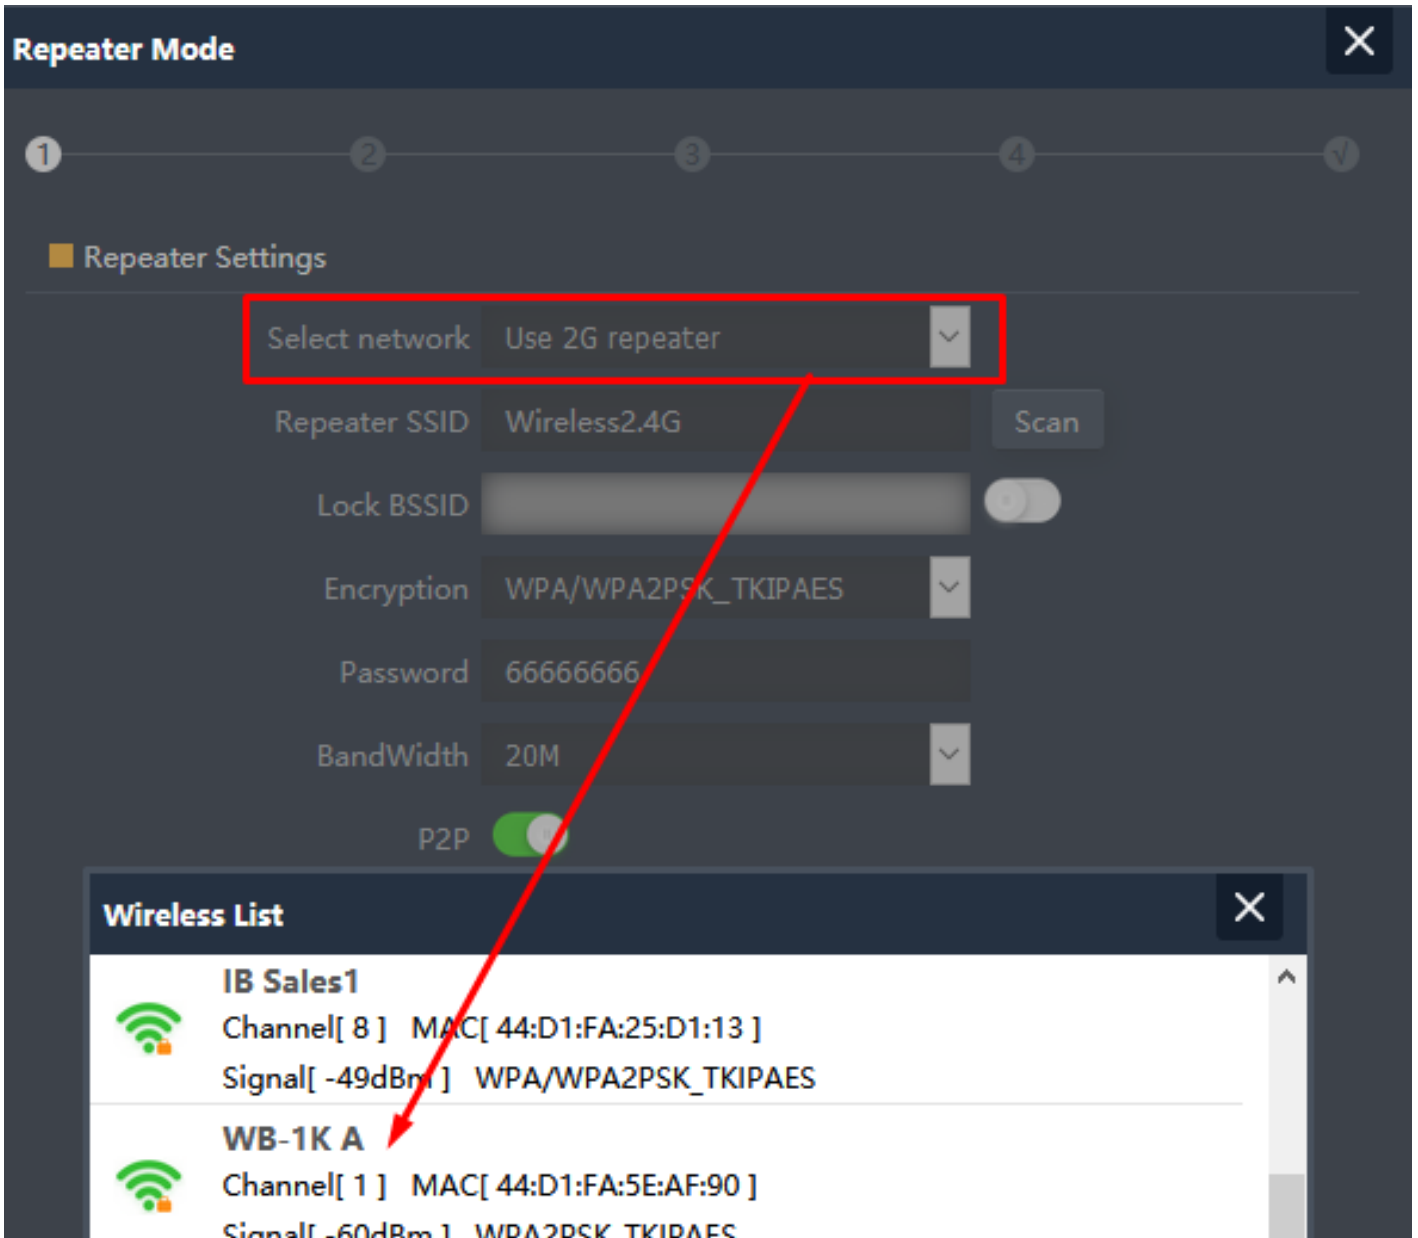

Fig 3.2.1 Scan 2G Repeater SSID AirONE AP1300

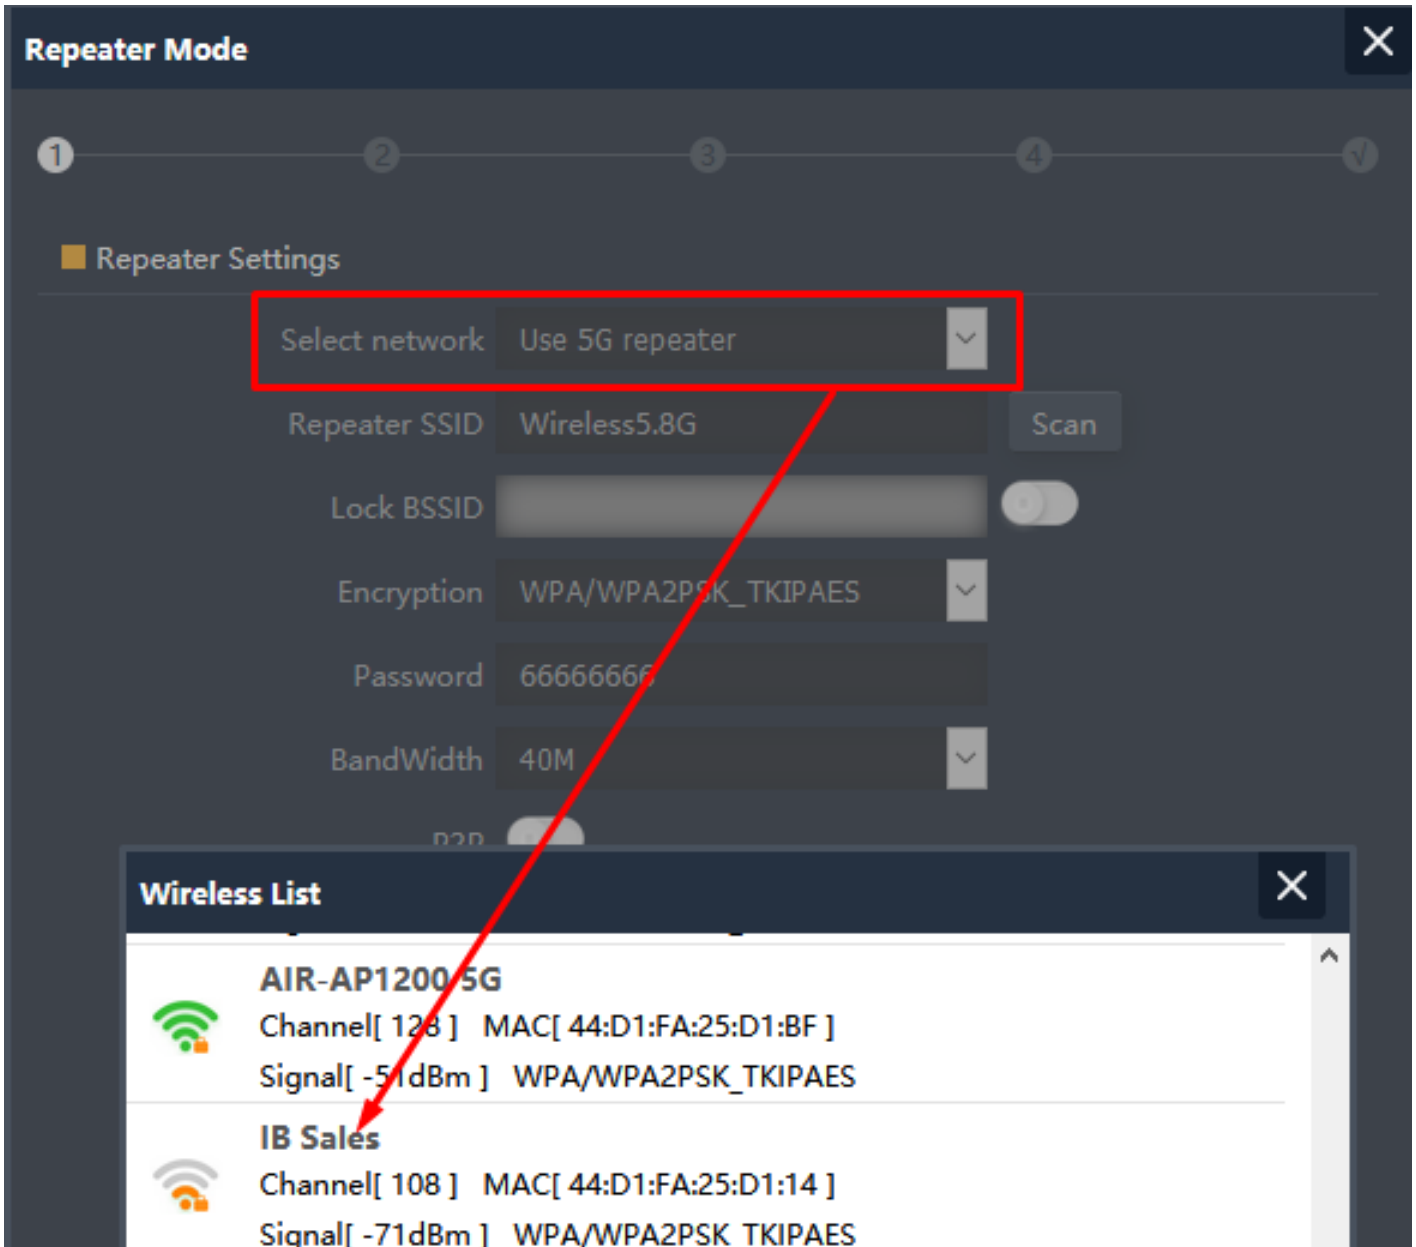

Fig 3.2.2 Scan 5G Repeater SSID AirONE AP1300

3.3 MAC ACL Settings

MAC ACL Allow or prohibits the wireless users access into this device based on MAC address. Filters using MAC address of wireless client. If you permit or allow few clients then automatically all other non-allowed client cannot associate with AP. When a client is denied access through a MAC-based filter, the client cannot associate with the AP.

Fig 3.3.1 Default MAC ACL of AirONE AP1300

Fig 3.3.2 Add MAC ACL of AirONE AP1300

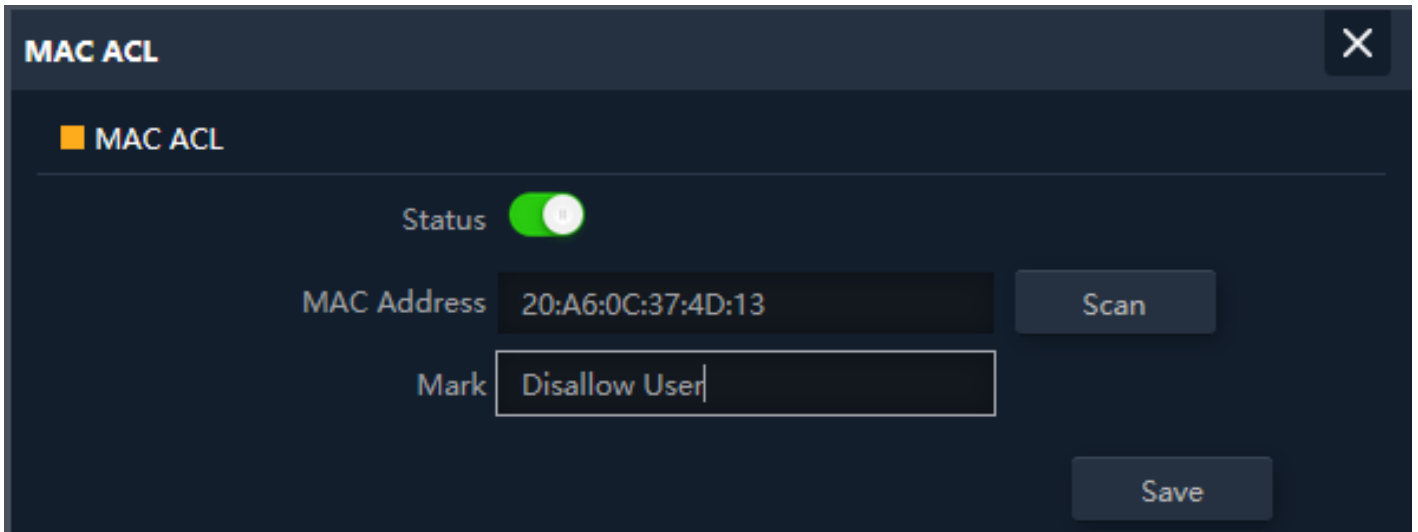

Fig 3.3.3 Select MAC address of AirONE AP1300

Fig 3.3.4 Apply MAC ACL for AirONE AP1300

Fig 3.3.5 Config Button of MAC ACL for AirONE AP1300

3.4 Wi-Fi Timer Settings

Enable **Wi-Fi Timer Off** to turn off the SSID in the specified time. It schedules, turning your Wi-Fi OFF at a given time so that wireless client cannot associate with AP.

Recommendation:

It is not recommended to make Wi-Fi Timer to be OFF in Wizard as well as in this setting to enjoy Wi-Fi all the time.

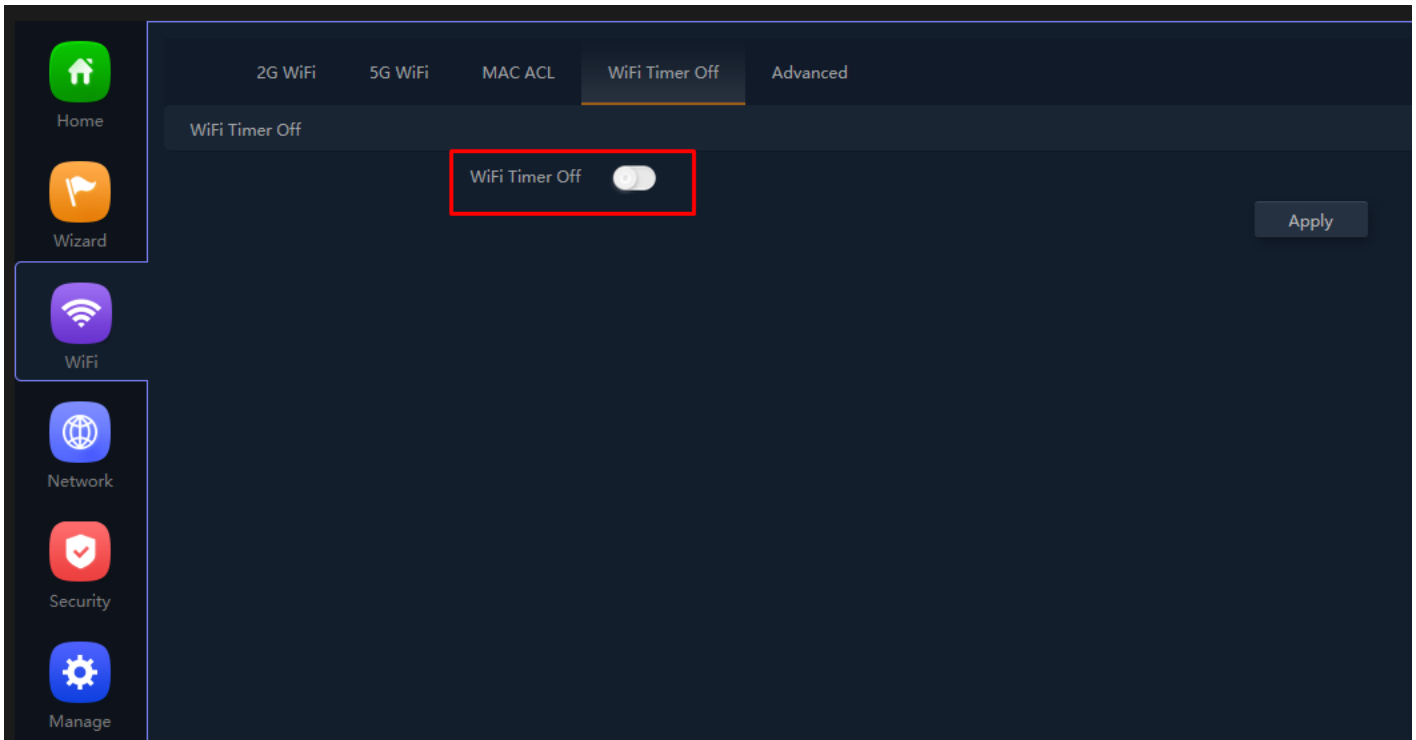

Fig 3.4.1 Default Wi-Fi Timer Off for AirONE AP1300

How to shutdown Wi-Fi after office time?

Assume office time is from 9:00AM to 10:00PM and you wish to turn off Wi-Fi access but want to keep power ON for other use. Then you have to turn OFF Wi-Fi from 22:00 to 09:00 as shown.

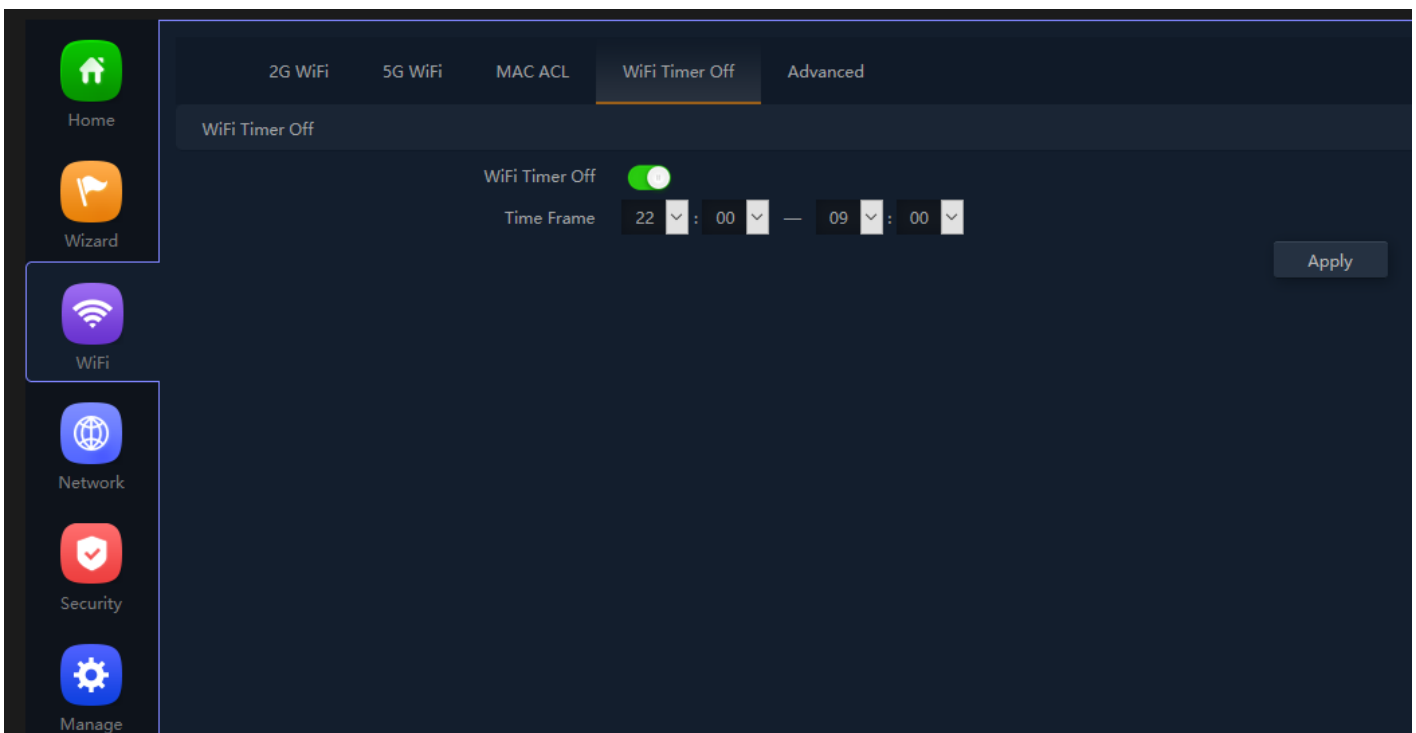

Fig 3.4.2 Wi-Fi Timer Off for AirONE AP1300

3.5 Advance Setting

In Advanced setting can set Country Region, 2G/5G Mode, Multicast Fast, Maximum wireless 128 clients for AP (Range 1-64) in 2G and AP (Range 1-64) in 5G, WLAN Partition, Short GI, Coverage Threshold and Transmit Power.

NETWORK

LAN Settings:

It can set Lan IP (Access IP), Subnet and STP along with DHCP Server, Start and maximum DHCP address, DHCP Lease Time and client list along with utilized IP count.

VLAN Settings:

Multi SSID can be provided with different VLAN ID to set different network with separate broadcast domain.

Static DHCP:

The DHCP Static IP Mapping feature enables assignment of static IP addresses with MAC address without taking IP addresses from DHCP pool with manual bindings.

WAN Settings:

You can set WAN Connect Method, MTU and DNS Manually along with Primary,

Secondary DNS.

WAN Advanced Settings:

It can Enable Web server access on WAN ports from 1 to 65535. It can set MAC Clone, Enable or disable Ping Access on WAN. Enable or disable IPsec, PPTP, L2TP pass through on VPN connection.

Cloud Server Settings:

You can set Cloud server URL along with binding code.

URL Mapping:

URL mappings work for the new Portal installation. URL mapping redirection to particular Website.

Note:

All *italic config* options are only available in WISP and Gateway mode only.

4.1 LAN Settings

IN LAN Setting you can set access IP for AP along with subnet. You can enable STP to avoid loops in network and preventing broadcast storms. You can set DHCP Server which acts as a network server that automatically provides and assigns IP addresses, default gateways and other network parameters to client devices. It relies on the standard protocol known as Dynamic Host Configuration Protocol or DHCP to respond to broadcast queries by clients.

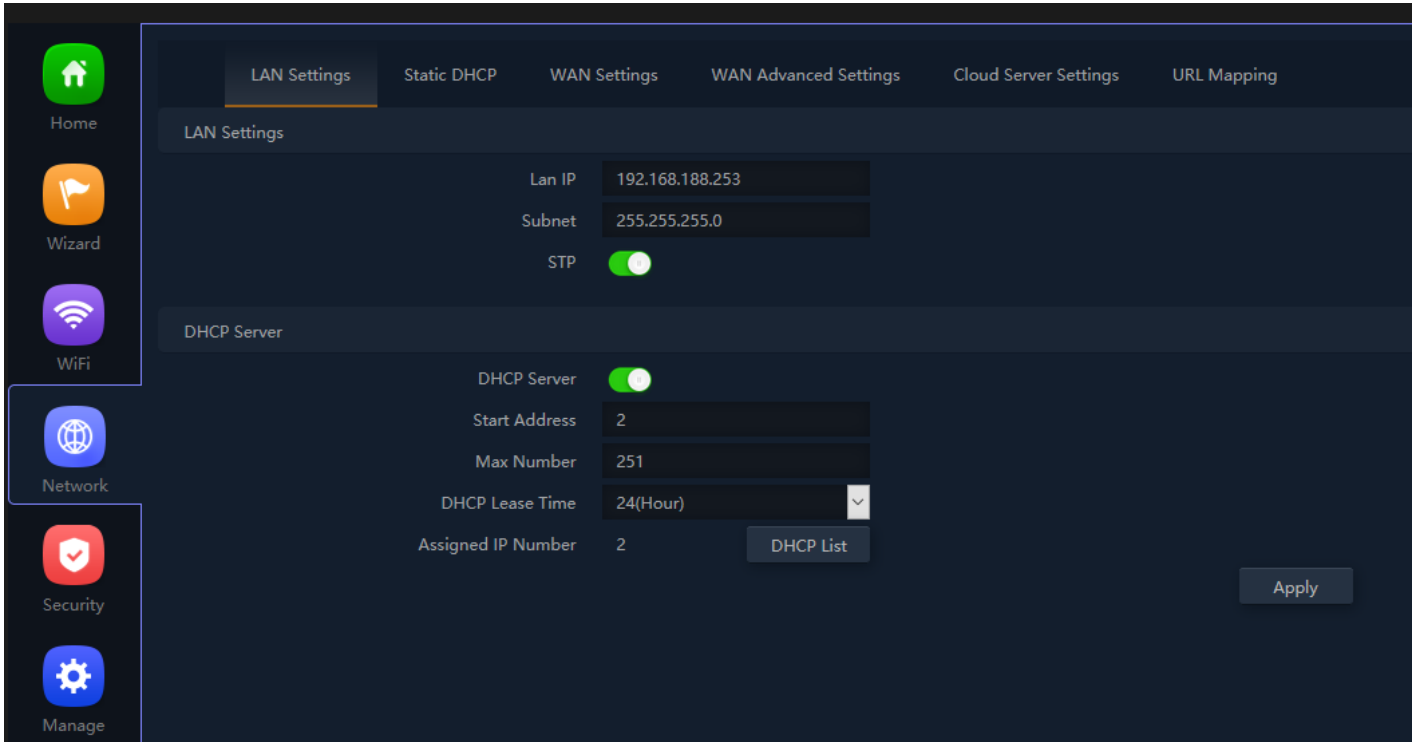

Fig 4.1.1 Setting LAN IP which used as access IP for AirONE AP1300

STP:

The Spanning Tree Protocol (STP) is a network protocol that builds a loop-free logical topology for Ethernet networks. The Spanning Tree Protocol (STP) is responsible for identifying links in the network and shutting down the redundant ones, preventing possible network loops. The purpose of STP is to allow redundant connection between devices while ensuring a loop-free topology for a LAN. It can also automatically re-enable redundant paths as backup paths in case the active path fails.

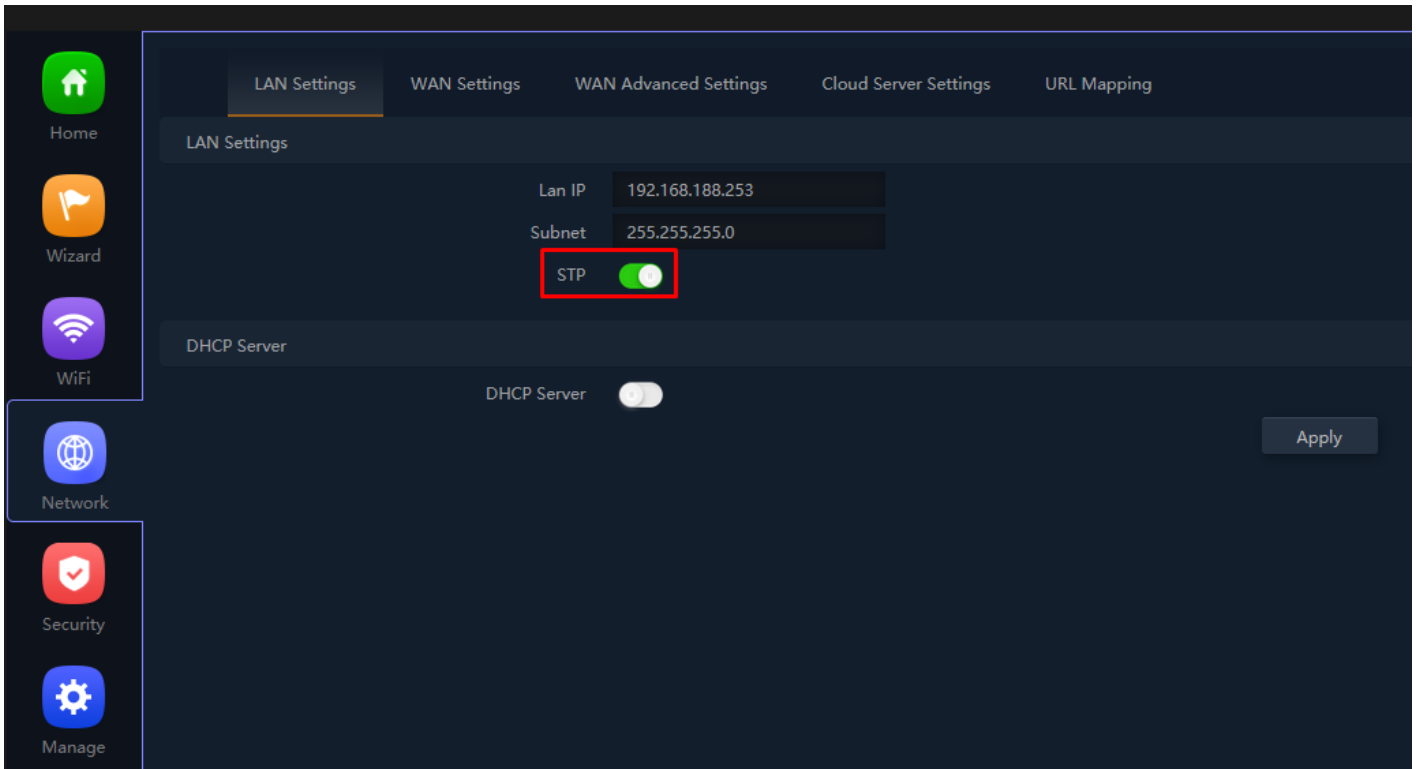

Fig 4.1.2 Enabling STP for AirONE AP1300

DHCP Server:

A DHCP Server is a network server that automatically provides and assigns IP addresses to wireless client devices. It relies on the standard protocol known as Dynamic Host Configuration Protocol or DHCP to respond to broadcast queries by clients.

Fig 4.1.3 Setting DHCP for AirONE AP1300

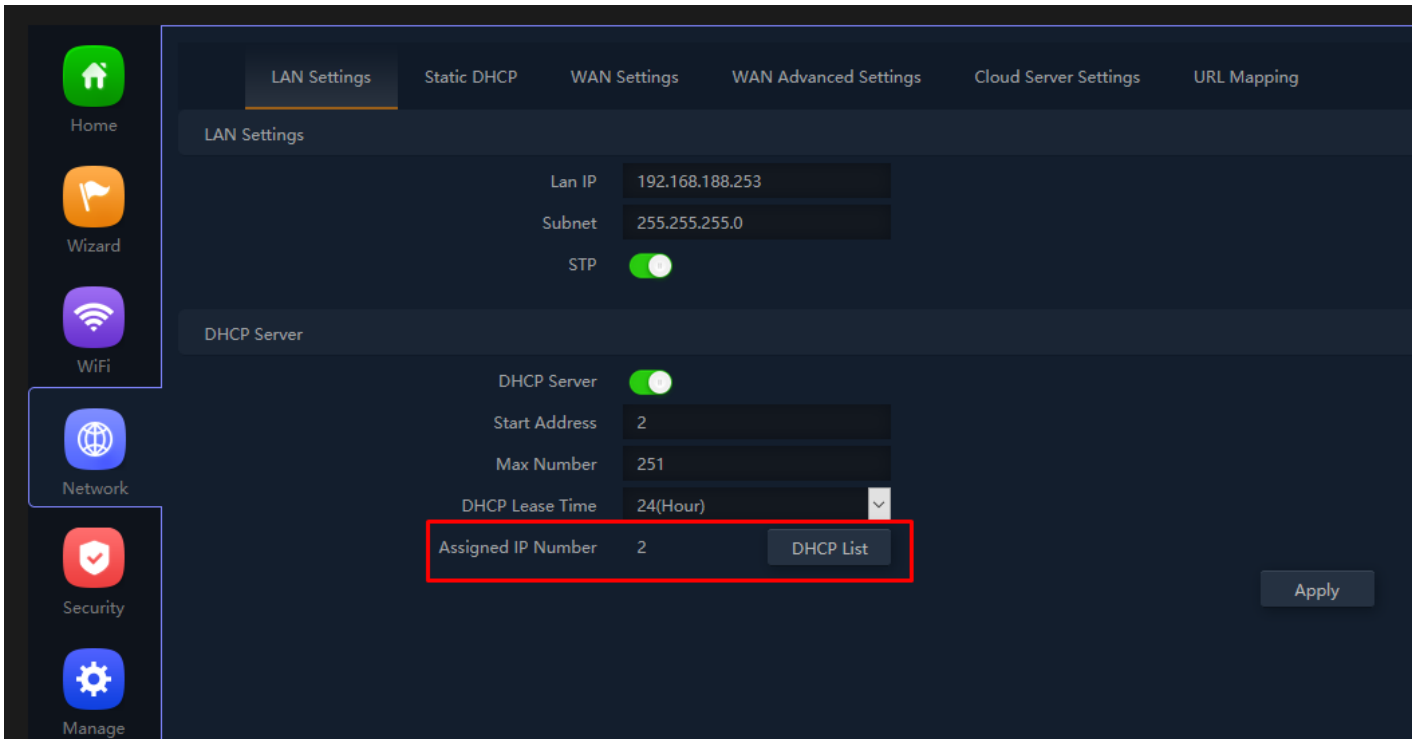

Fig 4.1.4 DHCP Assigned list for AirONE AP1300

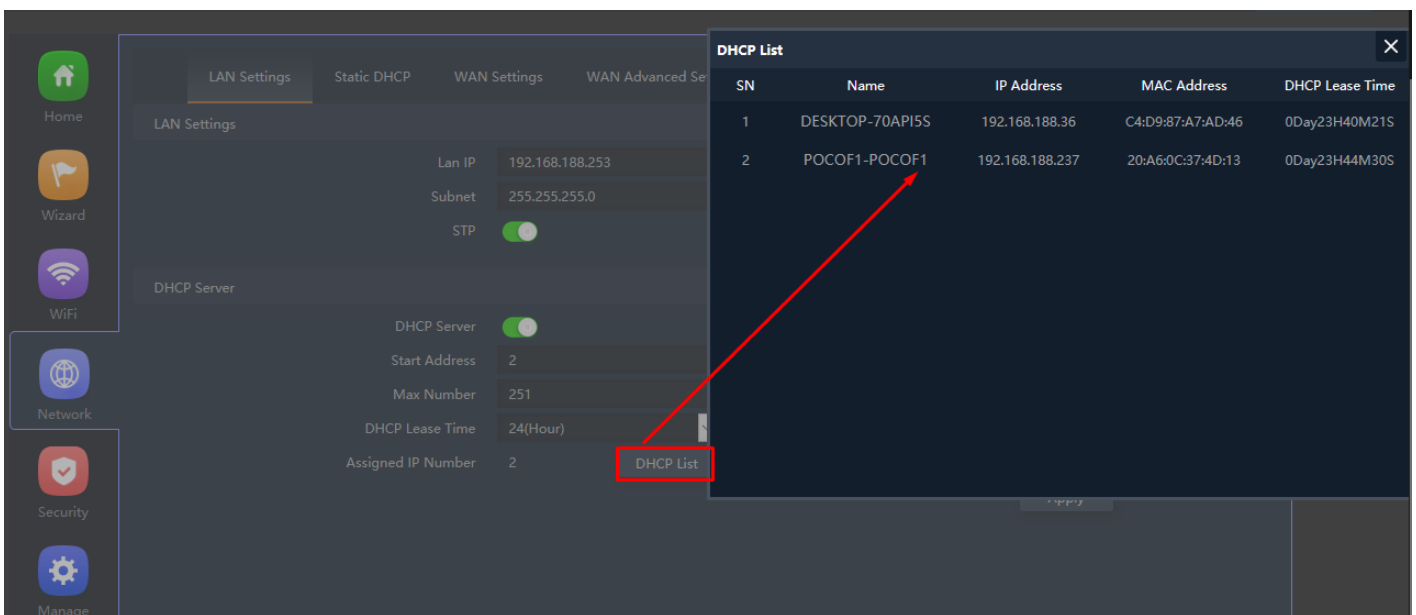

Fig 4.1.5 DHCP client list for AirONE AP1300

4.2 VLAN Setting

In VLAN Setting, you need an L2/L3 switch that make use of multiple VLAN. You can give wireless clients member of multiple VLAN using multi SSID. It is required to enable basic and VAP. These Multi SSID can be provided with different VLAN ID to set different network with separate broadcast domain.

Fig 4.2.1 Default VLAN setting for AirONE AP1300

Fig 4.2.2 VLAN setting for AirONE AP1300

4.3 Static DHCP Setting

A static IP address binding is ultimately set by an administrator and does not change. Although DHCP stands for dynamic host configuration protocol, you can still set up static IP addresses using DHCP. This allows the network server to always get the same IP even after it reboots, without dynamically assigning the IP. The DHCP Static IP Mapping feature

enables assignment of static IP addresses with MAC address without taking IP addresses from DHCP pool with manual bindings. Compatible ARP binding list is statically assigned.

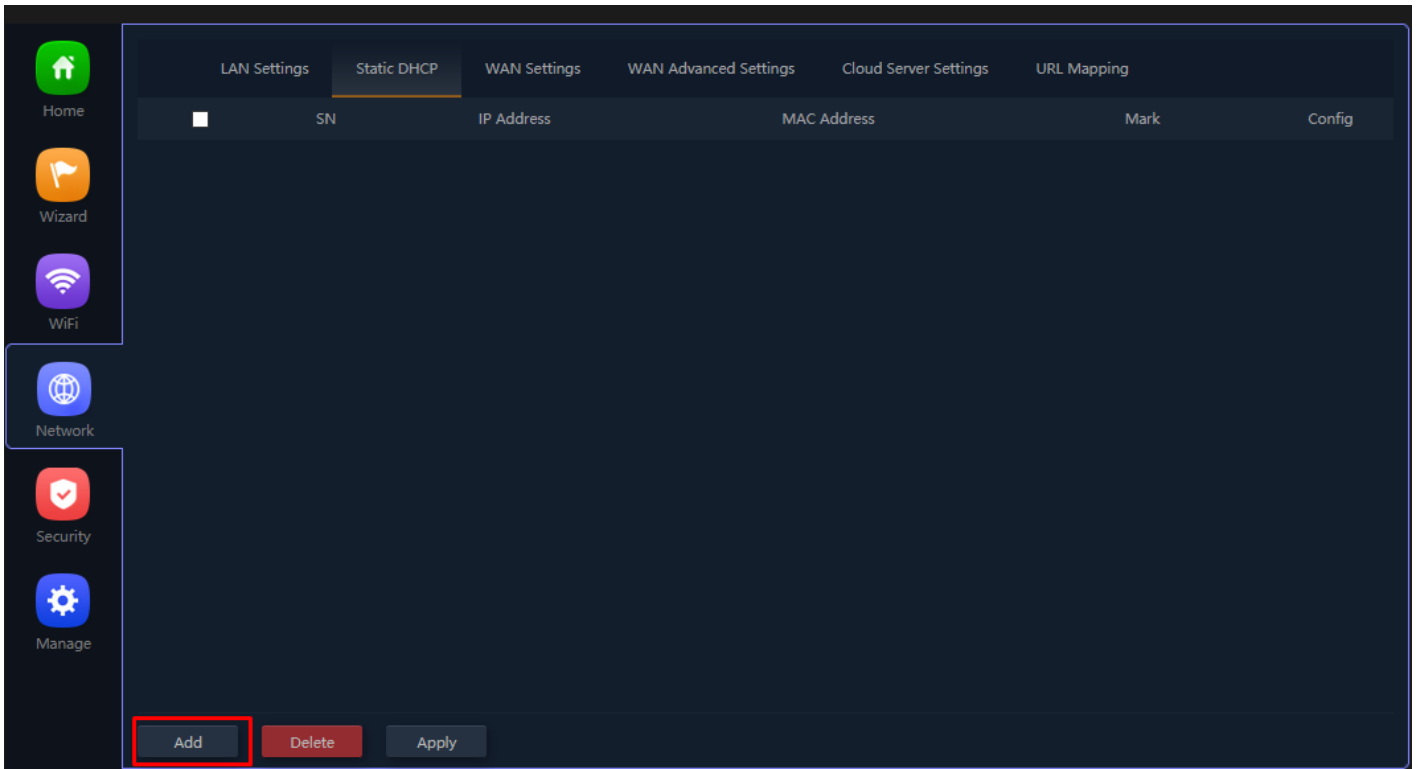

Fig 4.3.1 Default Static DHCP for AirONE AP1300

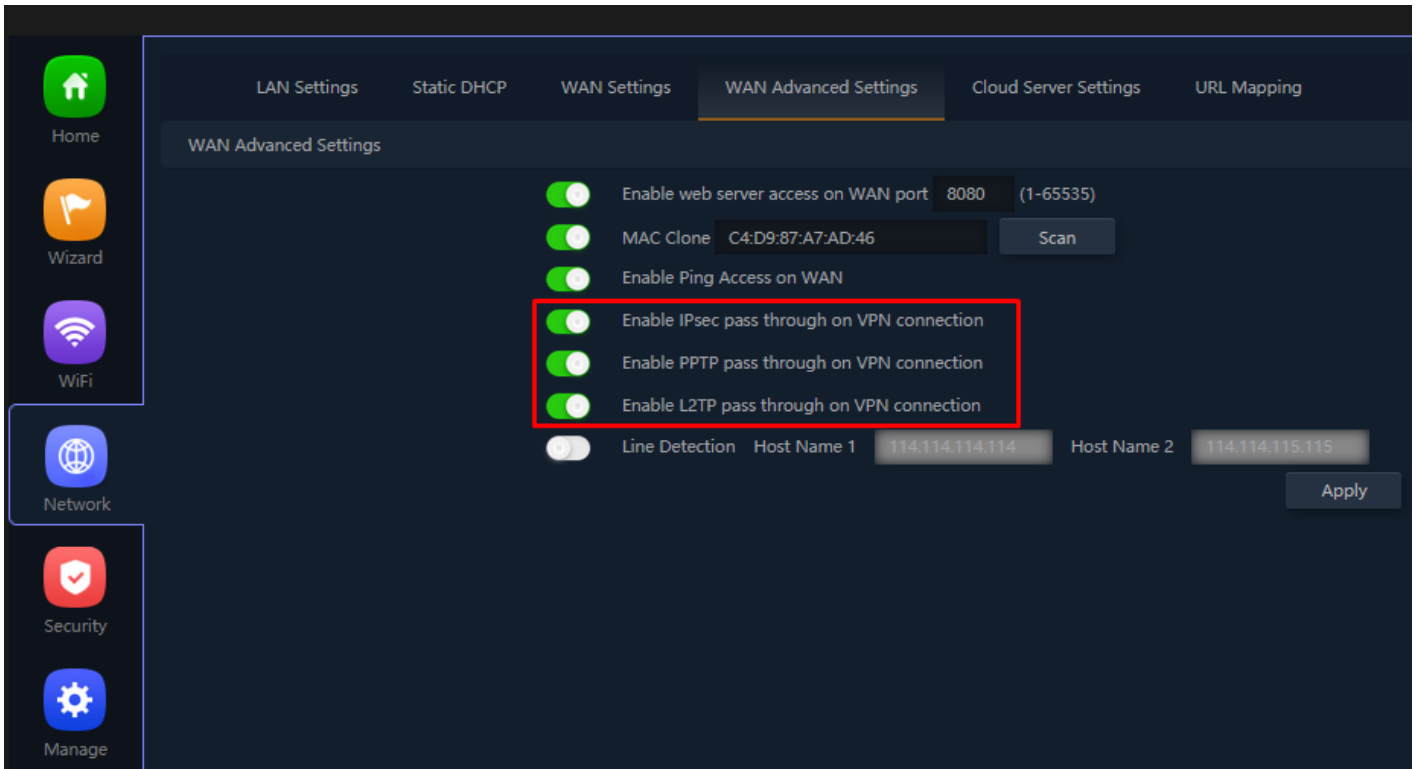

Fig 4.5.5 Enabling IPsec/PPTP/L2TP access through VPN for AirONE AP1300

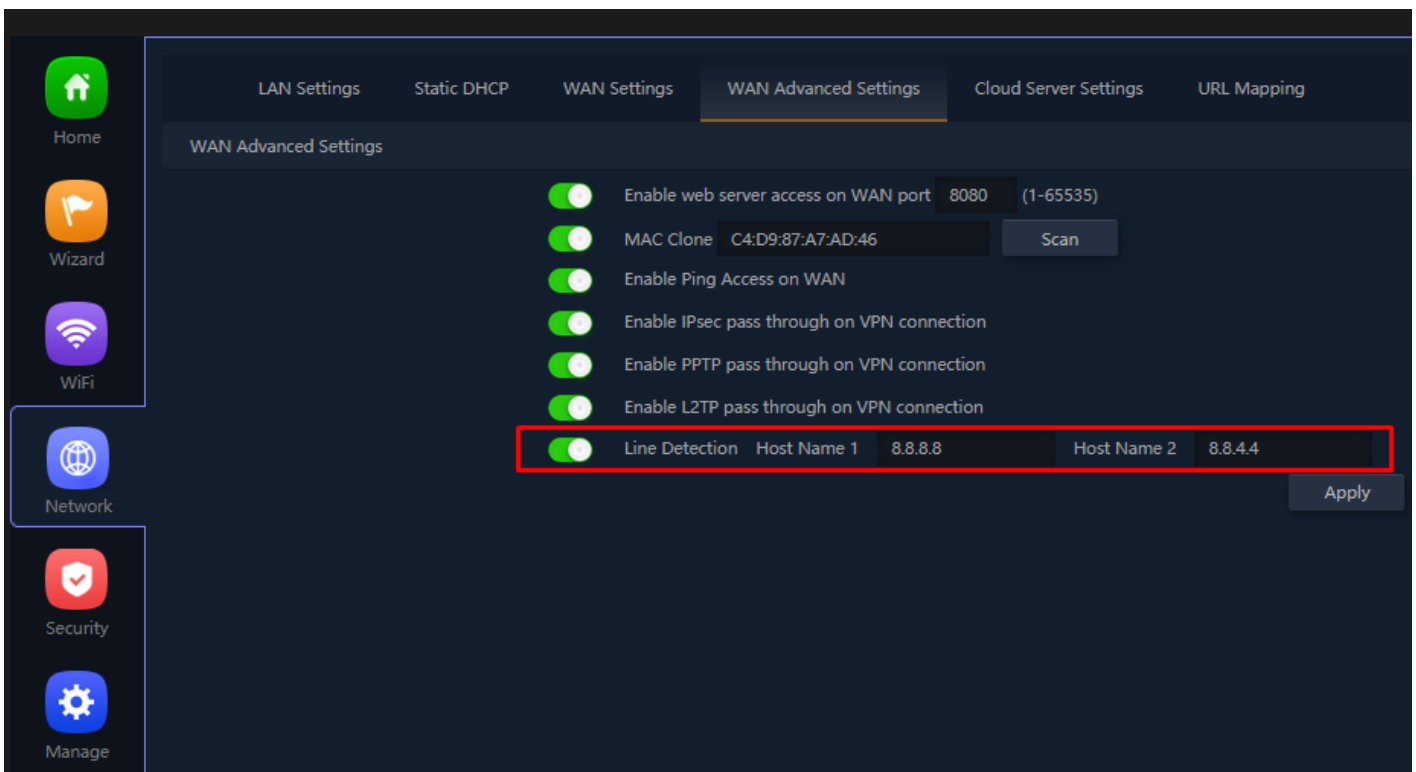

Fig 4.5.6 Line Detection for AirONE AP1300

4.6 Cloud Server Setting

A cloud-managed access point or networking solution allows business owners to manage Wi-Fi and network infrastructure over the cloud with zero maintenance charges, centralize control painlessly. This means businesses can connect to the cloud by

subscribing freely or pay-as-you-go, on-demand model.

Note:

This function is currently not available.

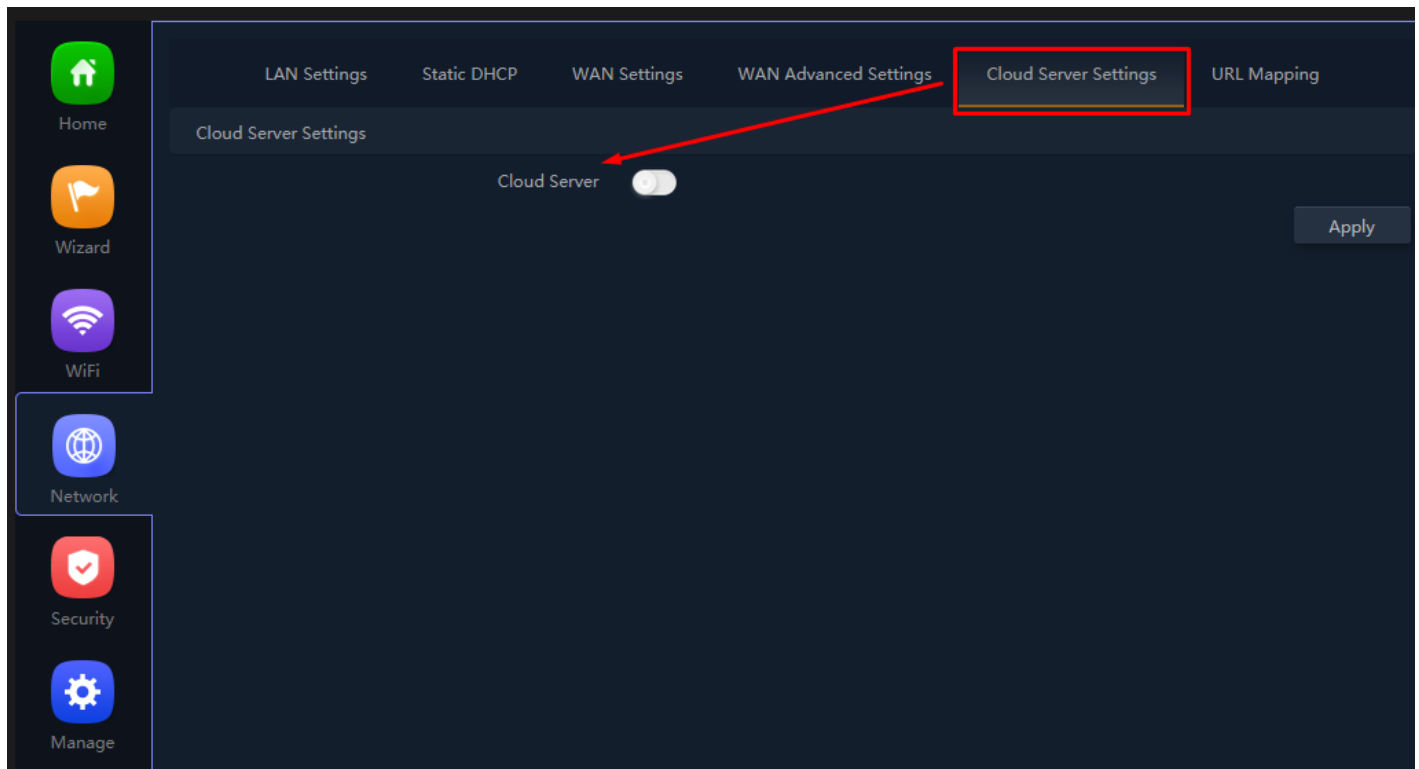

Fig 4.6.1 Default Cloud server setting for AirONE AP1300

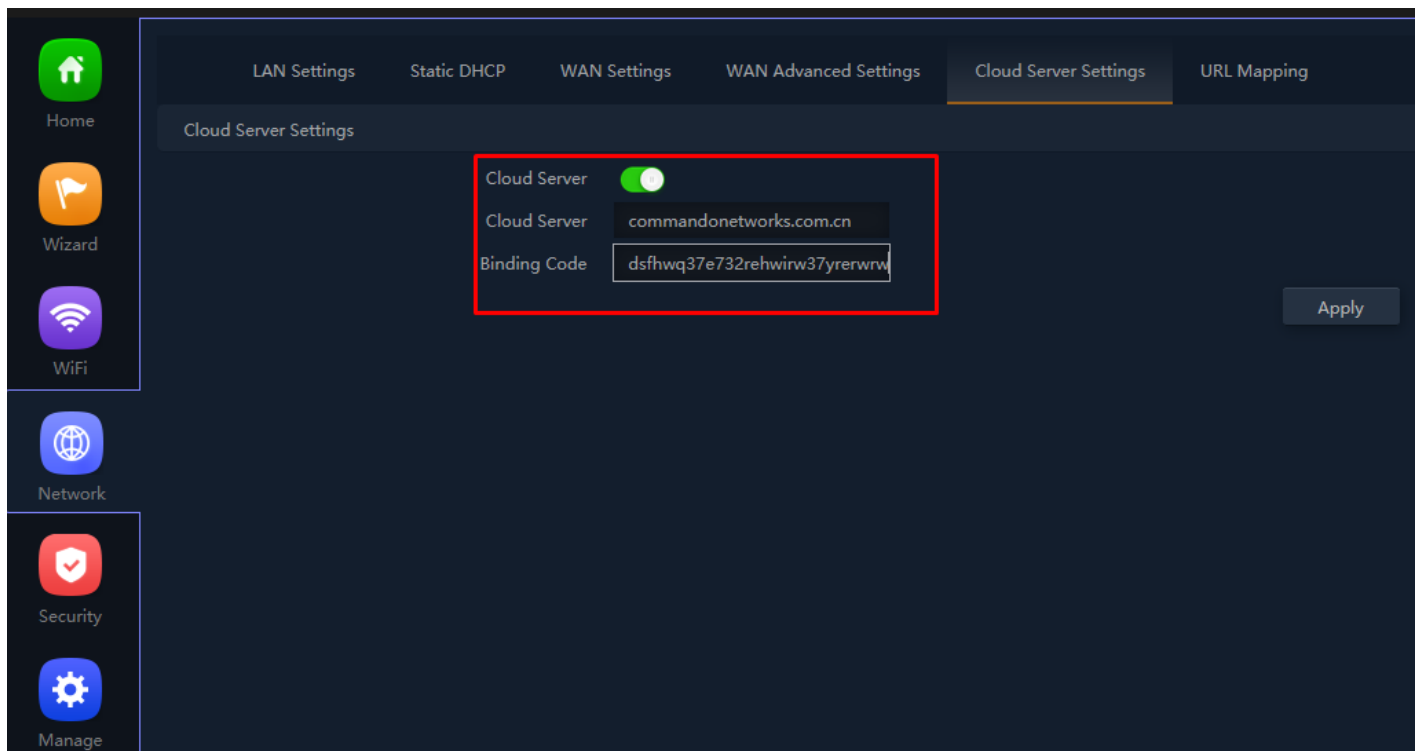

Fig 4.6.2 Enabling Cloud server setting for AirONE AP1300

4.7 URL Mapping

URL mappings work for the new Portal installation. URL mapping redirection to particular Website. You can replace URL for a selected IP.

Fig 4.7.1 Default URL Mapping setting for AirONE AP1300

SECURITY

URLI Filter Settings:

URL filtering is a type of Web filtering and is used to restrict Web content.

IP Filter Settings:

IP Filter bars filter IP to access the AP SSID.

MAC Filter Settings:

MAC Filter bars filter particular MAC to access the AP SSID.

Security Settings:

It can set Rule for particular TCP or UDP Protocol for selected wireless client IP

with port mapping function.

DMZ Settings:

It can set DMZ Host IP to provide an internal network with an additional security layer by restricting access.

Note:

All *italic config* options are only available in WISP and Gateway mode only.

5.1 URL Filter Settings

Organizations can create policies such as permanently allowing or blocking access to specific sites or groups of Websites, such as social networking pages to either redirect, filter or blocked. URL filtering is a type of Web filtering and is used to restrict Web content in order to restrict what content their employees can access over company networks. URL blocking refers to the process of allowing or denying the access to a certain Websites or certain URL addresses for the Web users either temporarily or permanently. If a URL is blocked, then the user will not be able to view the URL address or its Web content.

5.4 Security Settings

A security setting monitors incoming and outgoing network traffic and permits or blocks

data packets based on a set of security rules. It can help protect your network by filtering traffic and blocking outsiders from gaining unauthorized access.

Fig 5.4.1 Default Security setting for AirONE AP1300

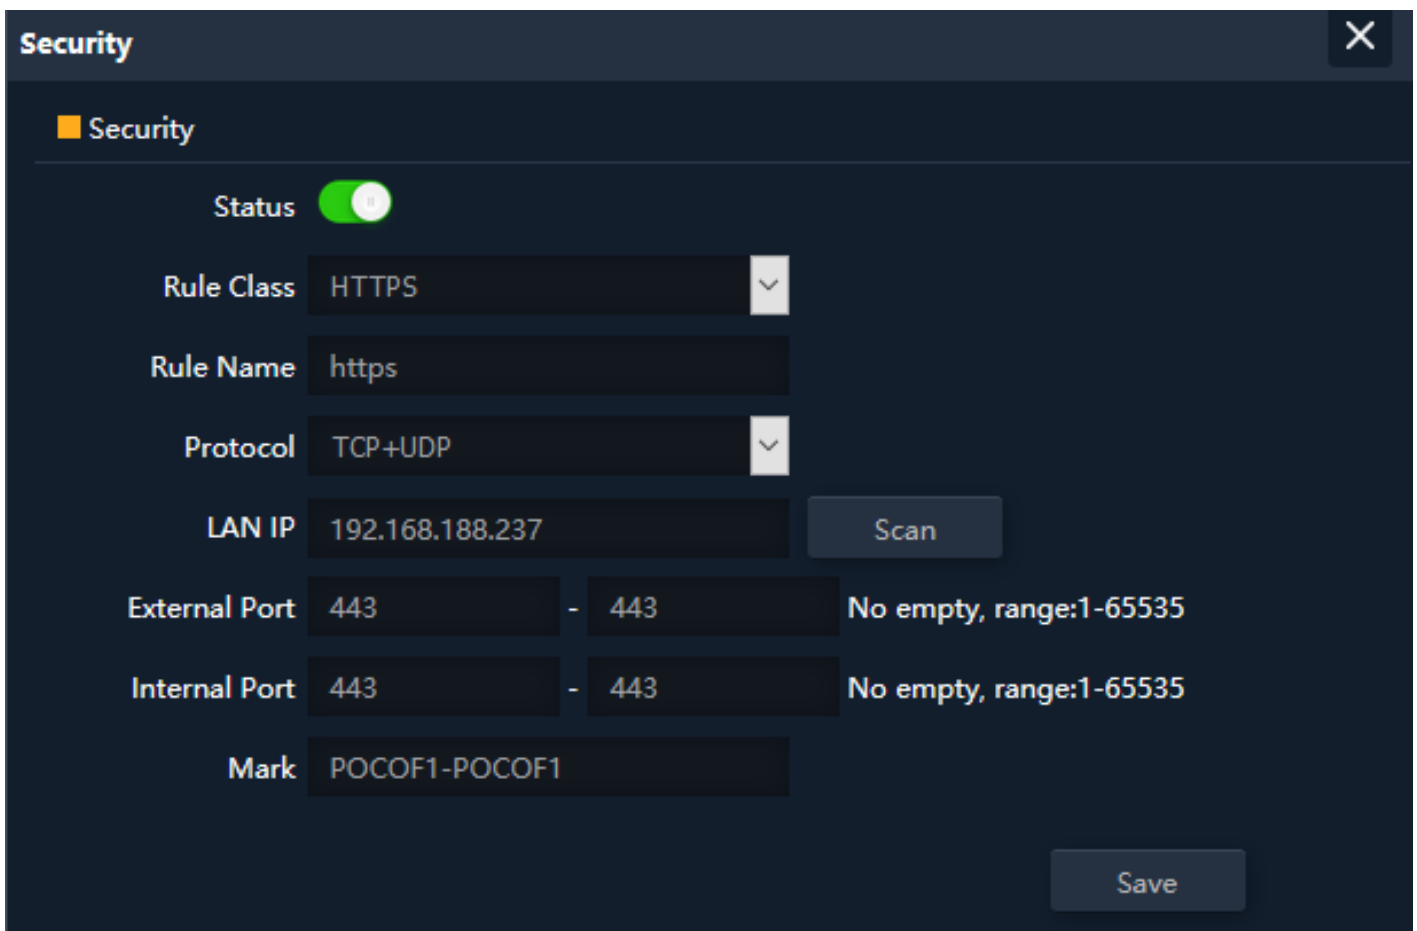

Fig 5.4.2 Security Rules setting for AirONE AP1300

Fig 5.4.3 Security setting for AirONE AP1300

5.5 DMZ Settings

DMZ or demilitarized zone is a physical or logical subnetwork that contains portion of your network carved off and isolated from the rest of your network of an organization's external-facing services to an untrusted, usually larger, network such as the Internet.

The main benefit of a DMZ is to provide an internal network with an additional security layer by restricting access to sensitive data and servers. A DMZ enables Website visitors to obtain certain services while providing a buffer between them and the organization's private network. The goal of a DMZ is to add an extra layer of security to an organization's local area network. A protected and monitored network node that faces outside the internal network can access what is exposed in the DMZ, while the rest of the organization's network is safe from attackers.

Fig 5.5.2 DMZ setting for AirONE AP1300

MANAGE

Configure:

Back up to save the configuration file to PC connected. Restore AP to known configuration. Reset the factory default settings. Telnet can be Enabled or disabled.

Reboot:

It possible to schedule an automatic reboot of AP.

Modify Password:

You can create password as per your choice and even change the admin password for login to device.

Upgrade:

This setting to upgrade the AP is to get more functions and better performance.

Time:

System Time is the time displayed while the AP is running. On this page you can configure the system time.

Log:

The Logs can record AP information effectively. You can enable and disable log and also can set Log server.

Flow Control:

Enabling flow control can optimize the bandwidth and improve the network experience of important applications.

IP Group:

It can define IP group which tells AP what groups the users are defined.

Time Group:

It can create Time Group with time range and set frequency to operate time group.

DDNS Settings:

It provides a fixed domain name for DDNS client and maps its latest IP address to this domain name.

Note:

All *italic config* options are only available in WISP and Gateway mode only.

6.1 Configure Setting

The Backup and Restore configuration features allow end users to backup all configurations made in AP. In cases when you need to reset the AP to factory default settings, you will be able to restore your previous configuration using the backup

configuration file. This will save you time by not going through the process of reconfigure the AP manually.

You can restore the AP to its factory default settings by the Reset button or by Reset Default option in this page. It must be noted that once the AP is reset, all the current configuration settings will be lost. If you want old configure files which is backup already then can use option upload backup. Use the page to restore the AP to the factory defaults or use the button to restore the AP to old configuration.

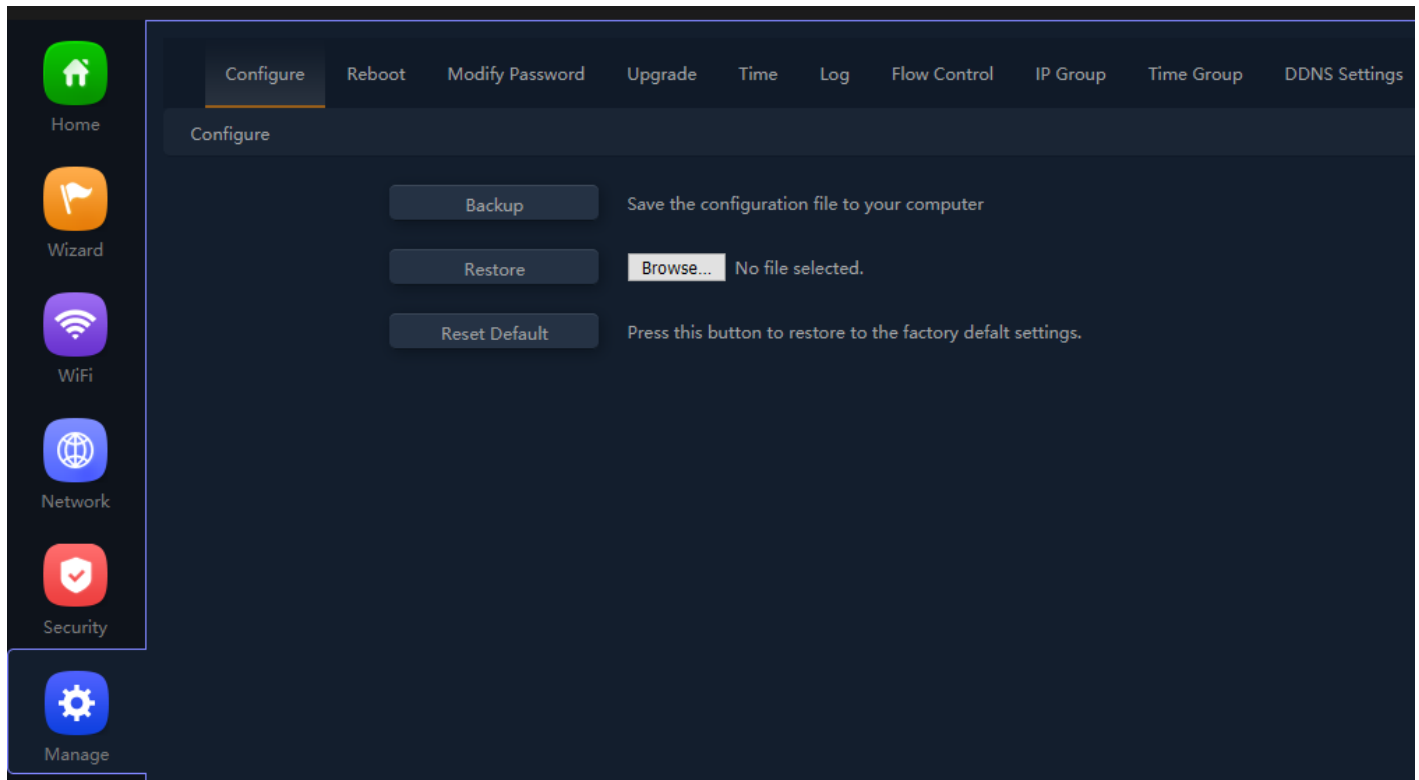

Fig 6.1.1 Default Configure setting for AirONE AP1300

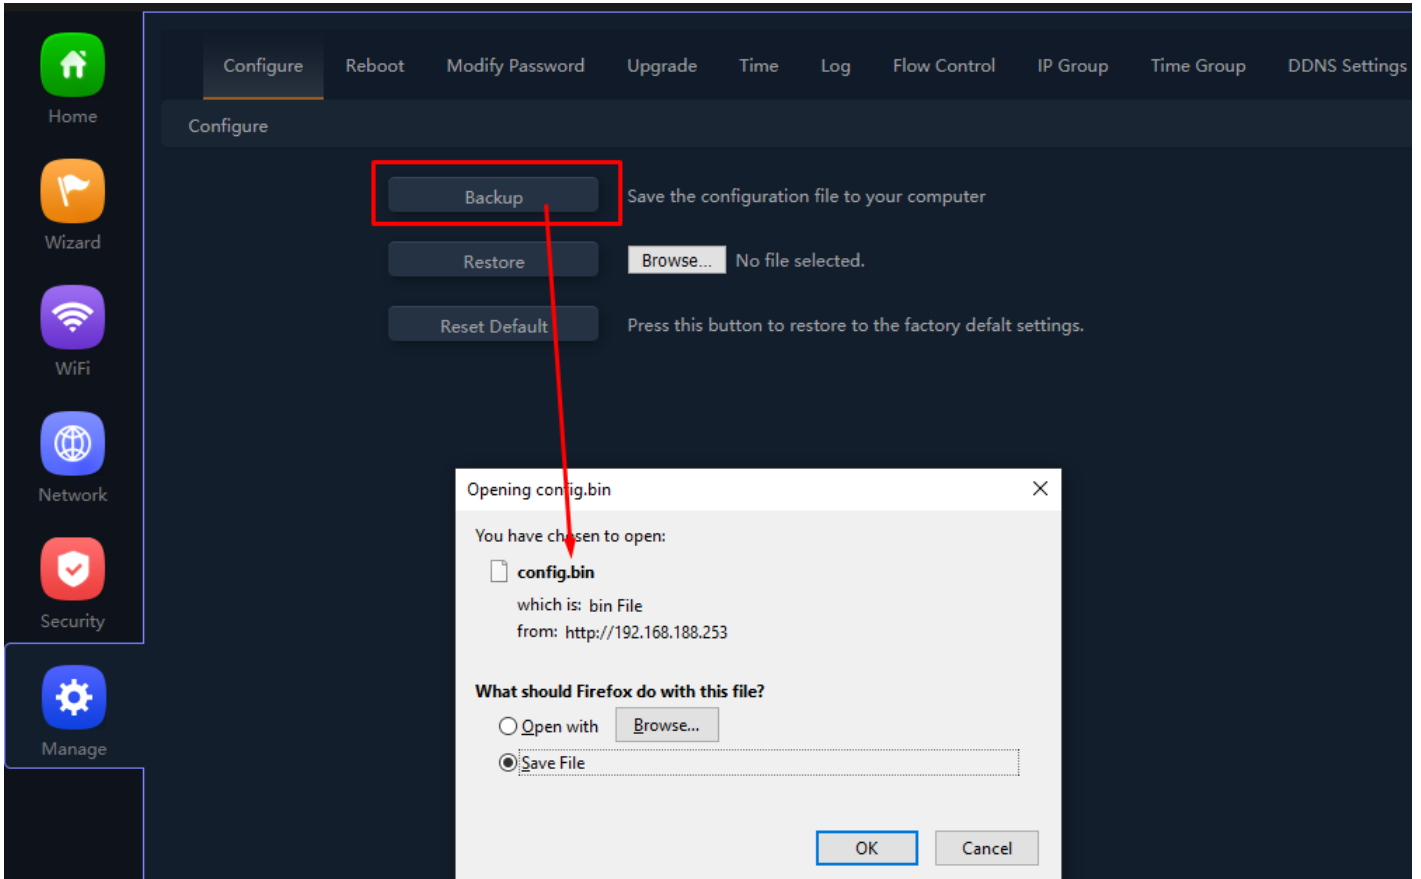

Fig 6.1.2 Taking backup of AirONE AP1300

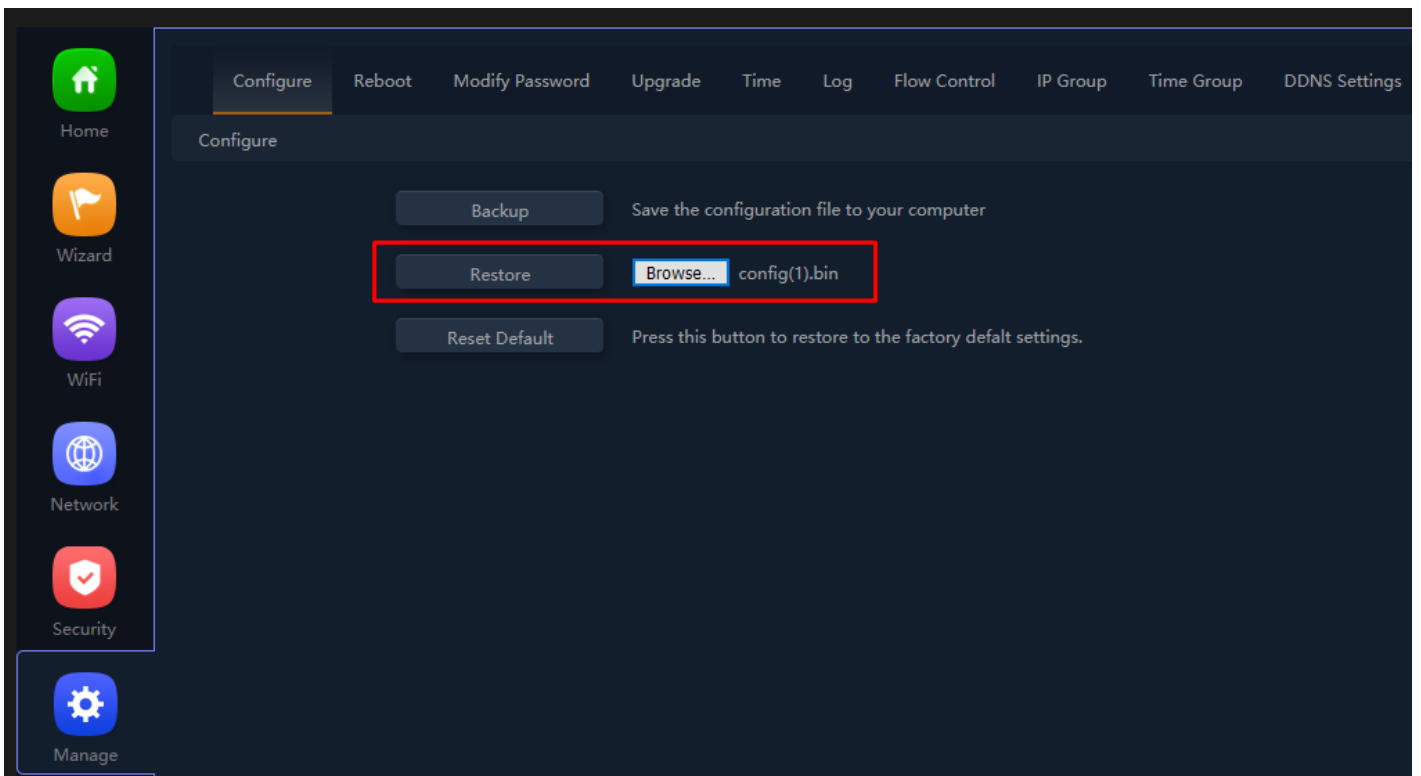

Fig 6.1.3 Restore to known Configure for AirONE AP1300

Fig 6.1.4 Reset to factory default for AirONE AP1300

6.2 Reboot Setting

It possible to schedule an automatic reboot of AP. The configuration will not be lost after rebooting. The Internet connection will be temporarily interrupted while rebooting.

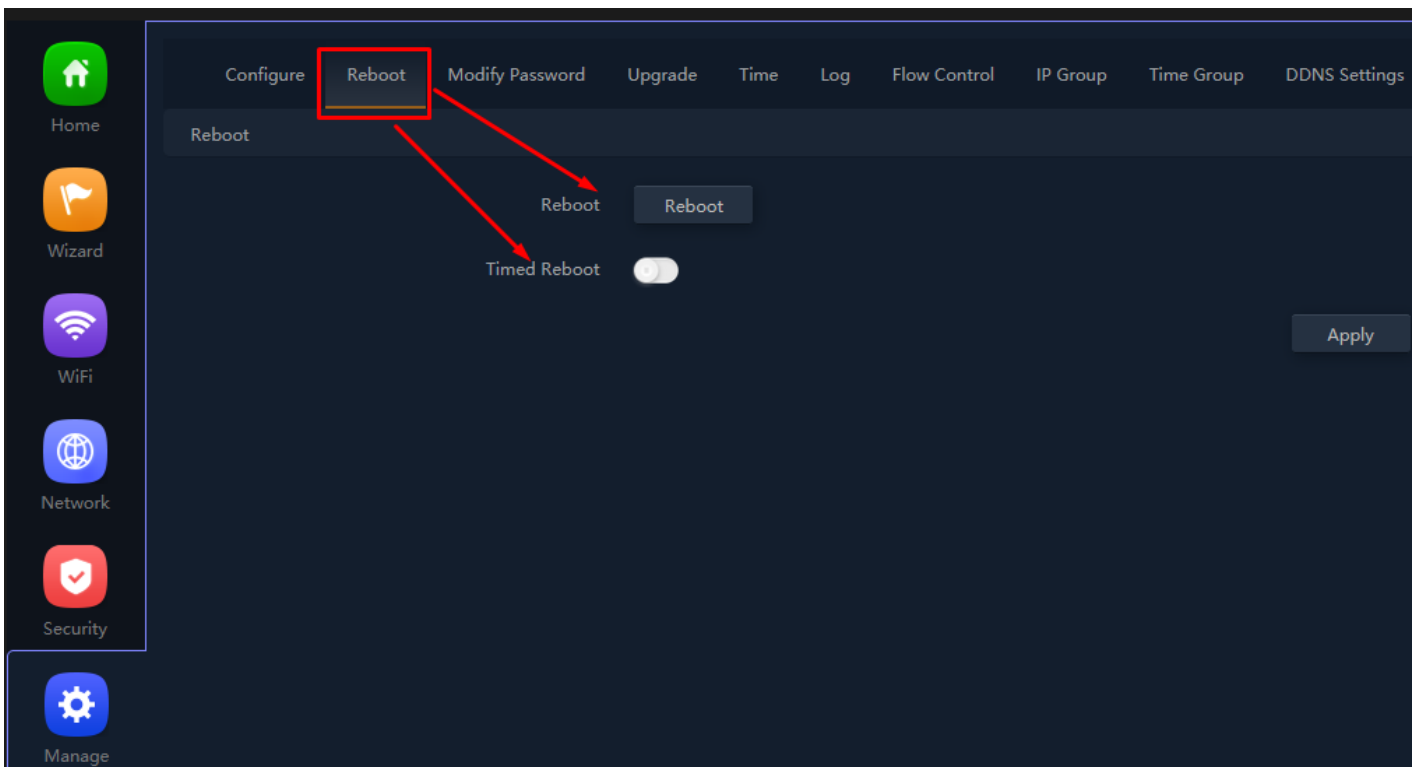

Fig 6.2.1 Default reboot setting for AirONE AP1300

Fig 6.2.2 Instant Reboot setting for AirONE AP1300

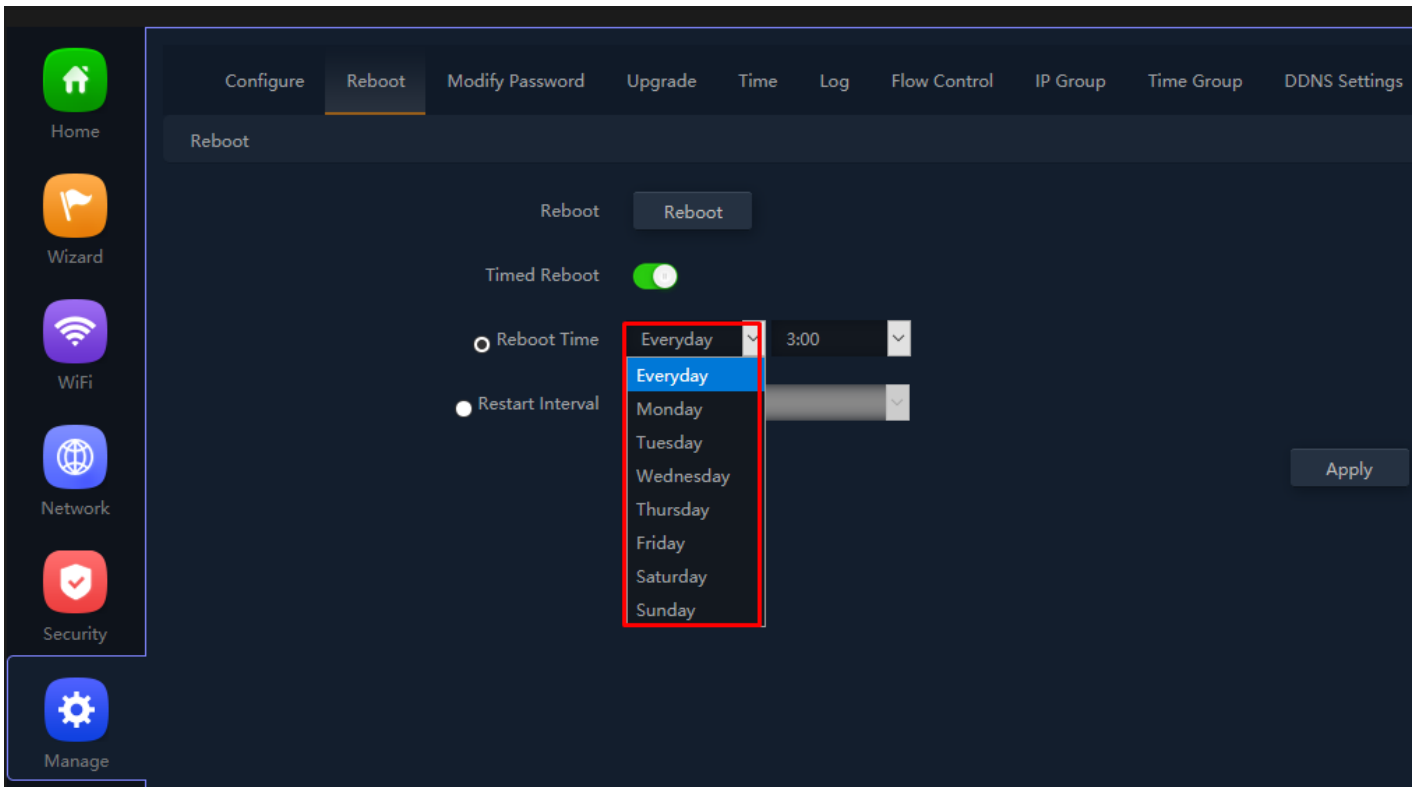

Fig 6.2.3 Enable timed reboot for AirONE AP1300

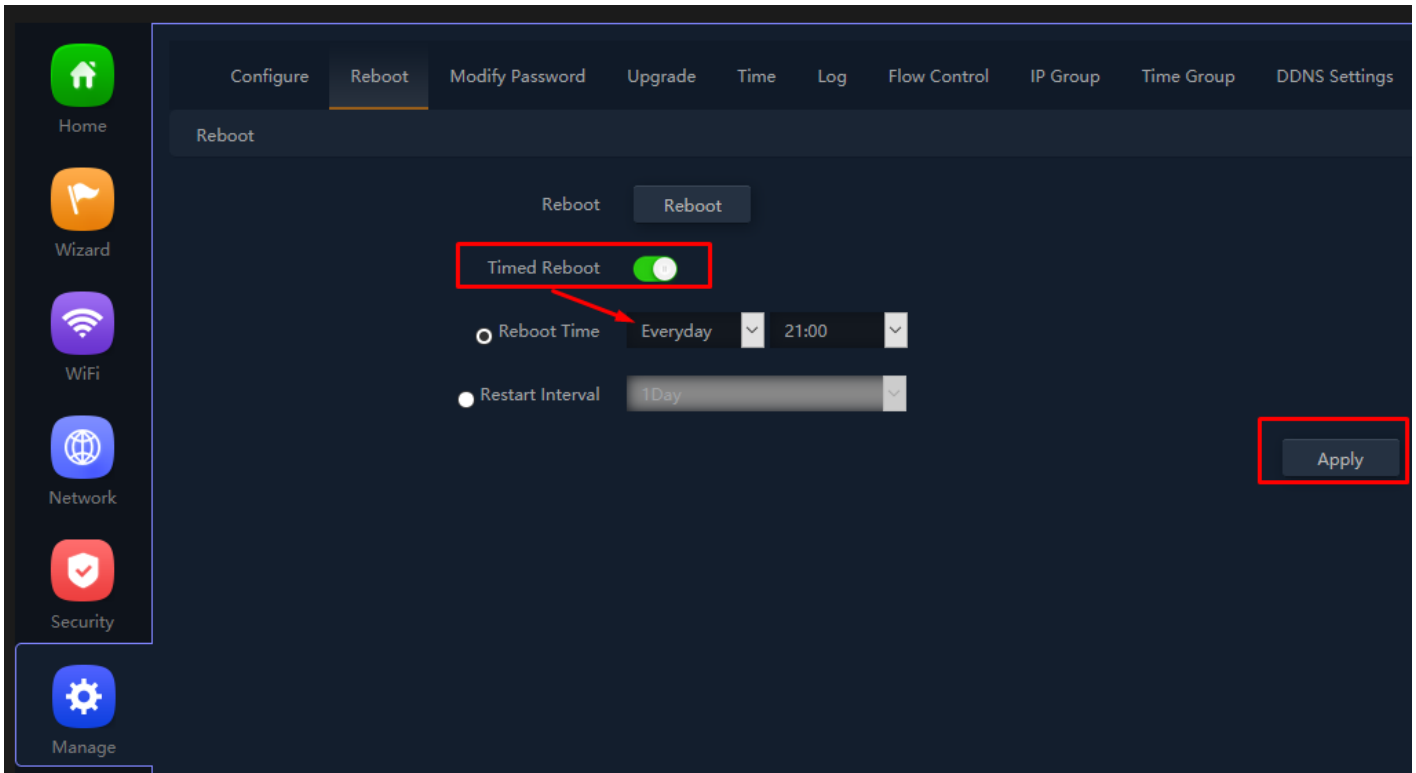

Fig 6.2.4 Enable daily reboot for AirONE AP1300

Fig 6.2.5 Enable Restart interval for AirONE AP1300

Recommendation: It is strongly recommended to disable reboot to avoid network disruption and outage.

6.3 Modify Password Setting

On this page, you create password as per your choice and even change the admin password for login to device. You can modify the factory default password of the AP and create new user password to manage the device.

Note:

The factory default password is **admin or commando** depending on firmware version is mentioned in backside of device.

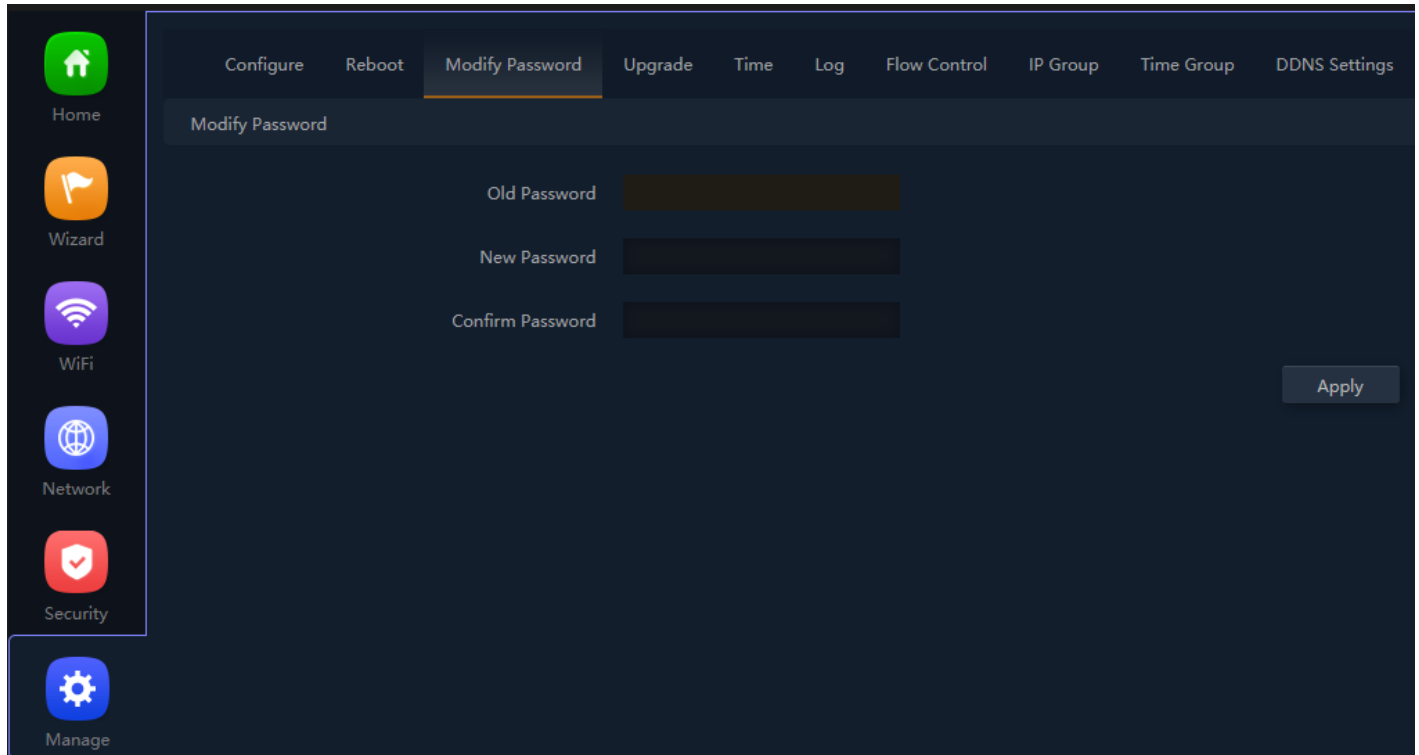

Fig 6.3.1 Modify password page for AirONE AP1300

Fig 6.3.2 Setting New password for AirONE AP1300

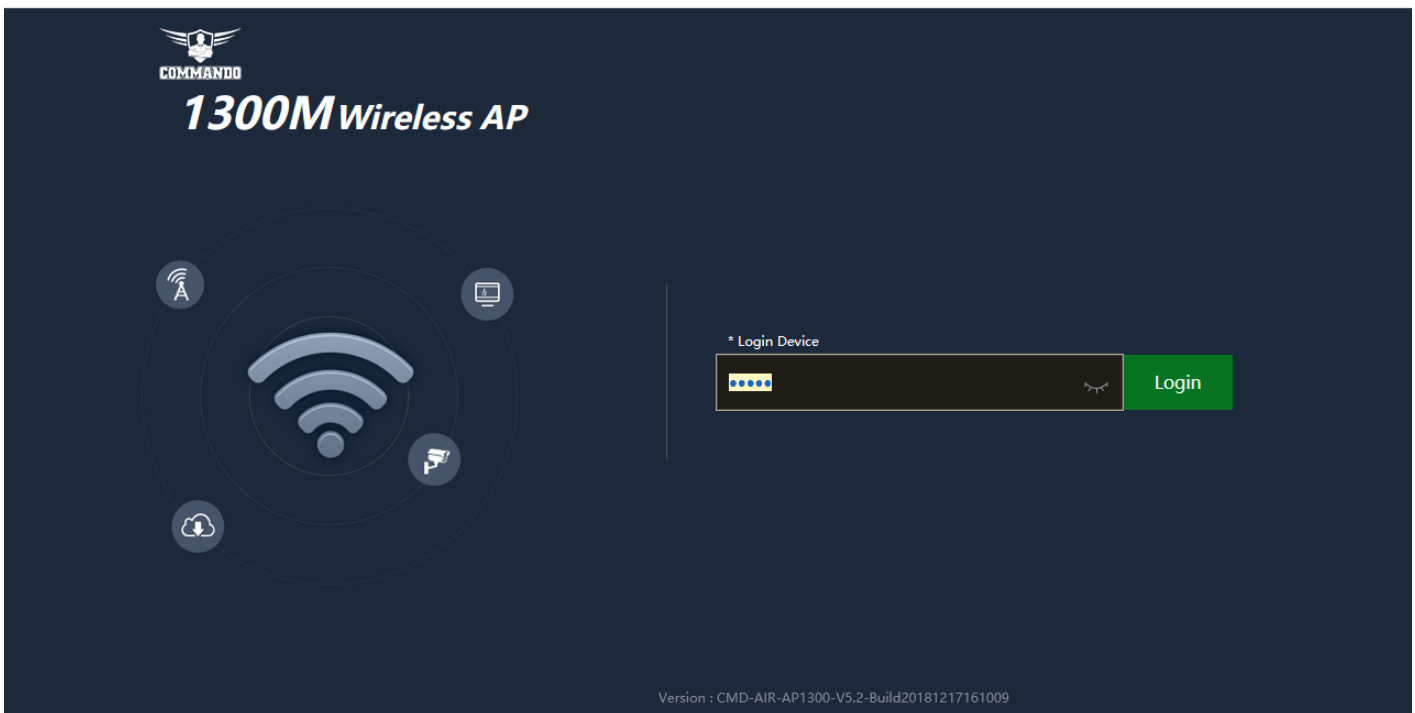

Fig 6.3.3 New password to be entered to login AirONE AP1300

Recommendation:

It is strongly recommended to change default password **admin or commando** which is used to access device.

6.4 Upgrade Setting

Version displays the current Configuration version of the AP. To upgrade the AP is to get more functions and better performance.

Note:

1. After upgrading, the AP will reboot automatically.
2. To avoid damage to device, please don't turn off the AP while upgrading.

Fig 6.4.1 Default Upgrade page for AirONE AP1300

Fig 6.4.2 Browse for Upgrade file of connected PC for AirONE AP1300

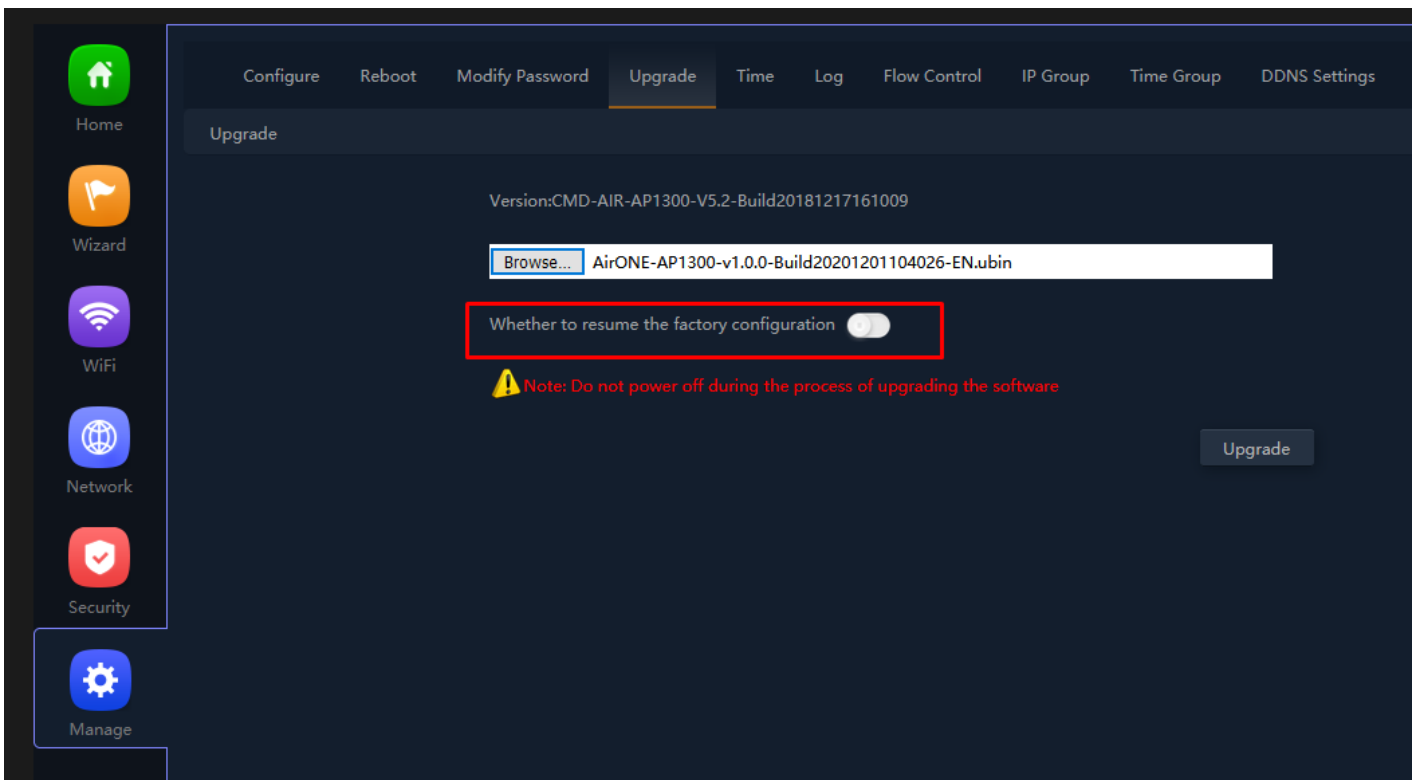

Fig 6.4.3 Upgrade with no previous configuration for AirONE AP1300

Note:

It is advised to take backup of the configuration before upgrading.

6.5 Time Setting

System Time is the time displayed while the AP is running. On this page you can configure the system time and the settings here will be used for other time-based functions like Logs.

In time setting you can set System Time, Time Zone, Set Time Automatically and with help of NTP service. System Time displays the current date and time of the AP. Time Zone displays the current time zone of the AP. You can configure the time zone and NTP Server. The AP will get GMT automatically if it has connected to a NTP Server. Manual time can also be set by feeding date and time manually.

Synchronize with Host to set system time is best and recommended option. It uses administrator PC's clock for setting time.

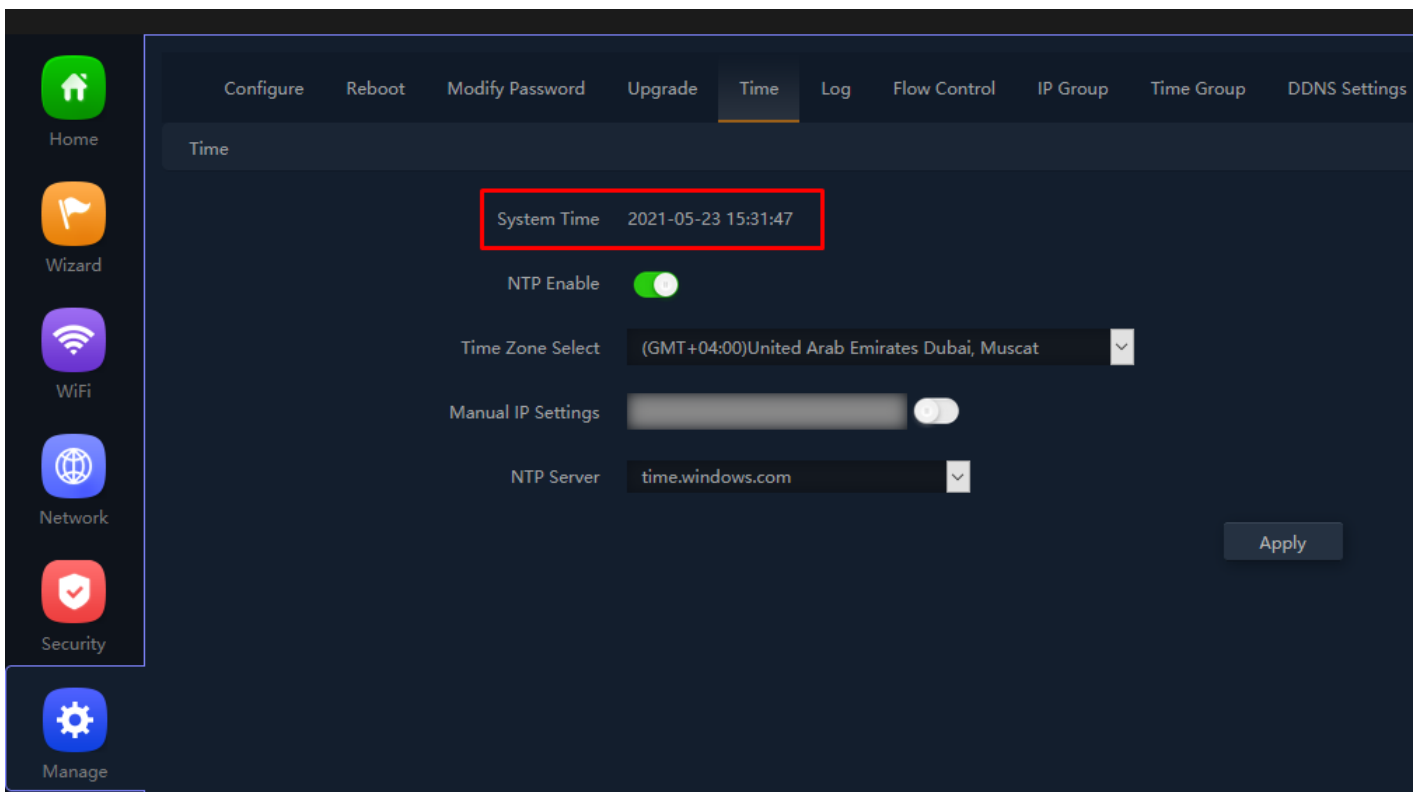

Fig 6.5.1 System Time for AirONE AP1300

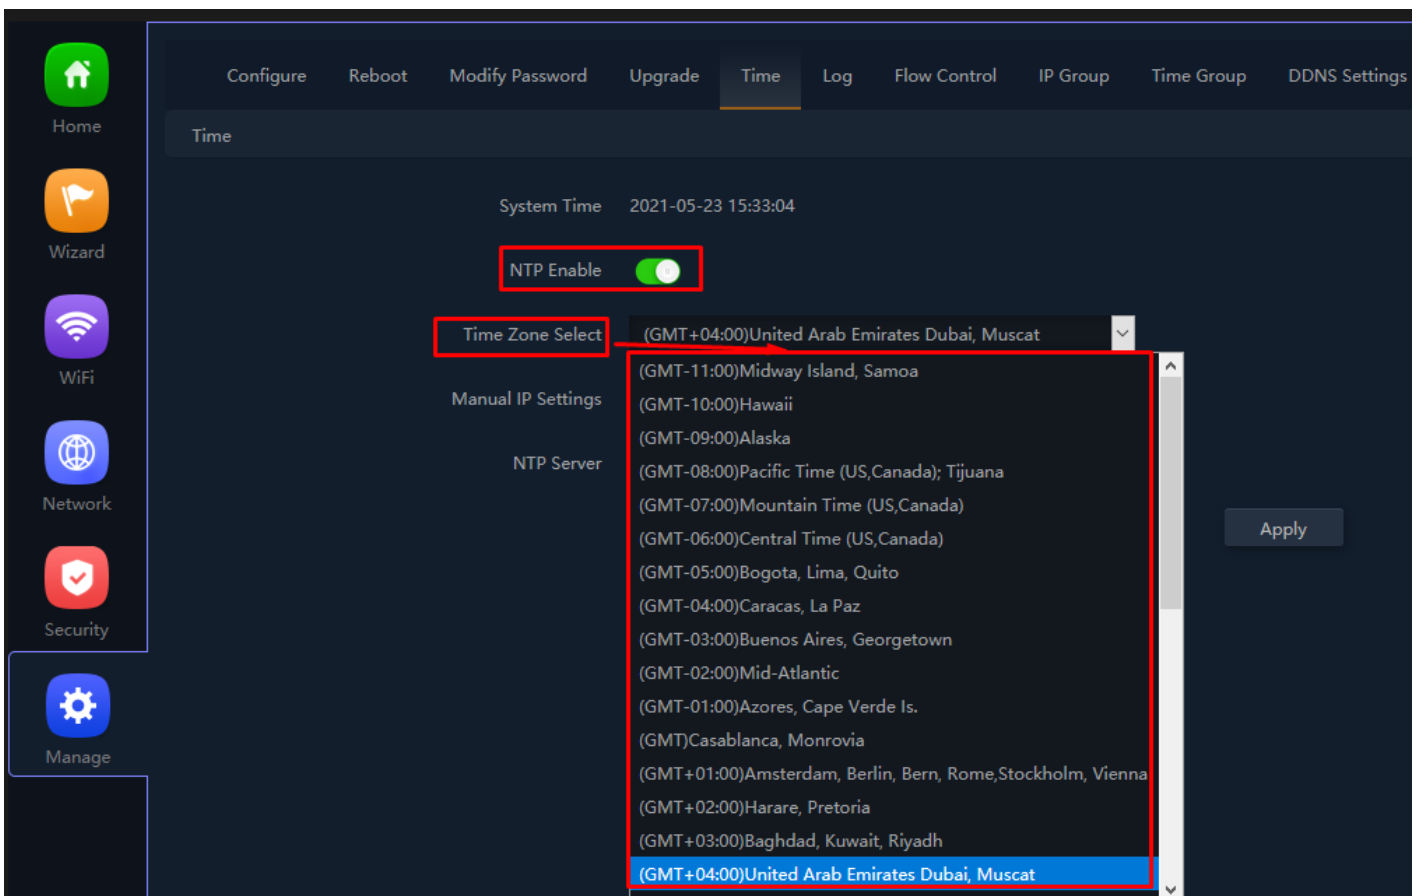

Fig 6.5.3 Enable NTP and select time zone for AirONE AP1300

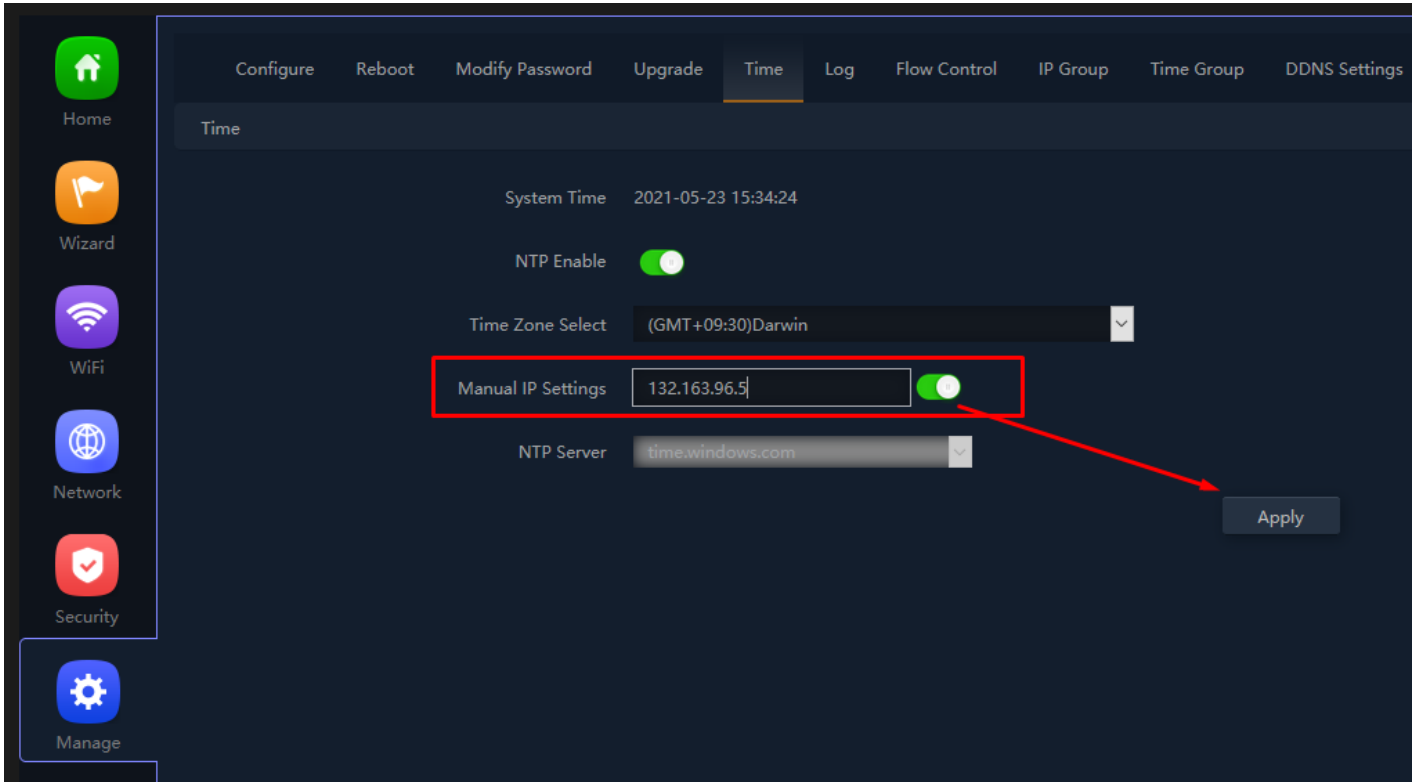

Fig 6.5.4 Enable NTP with Manual IP setting for AirONE AP1300

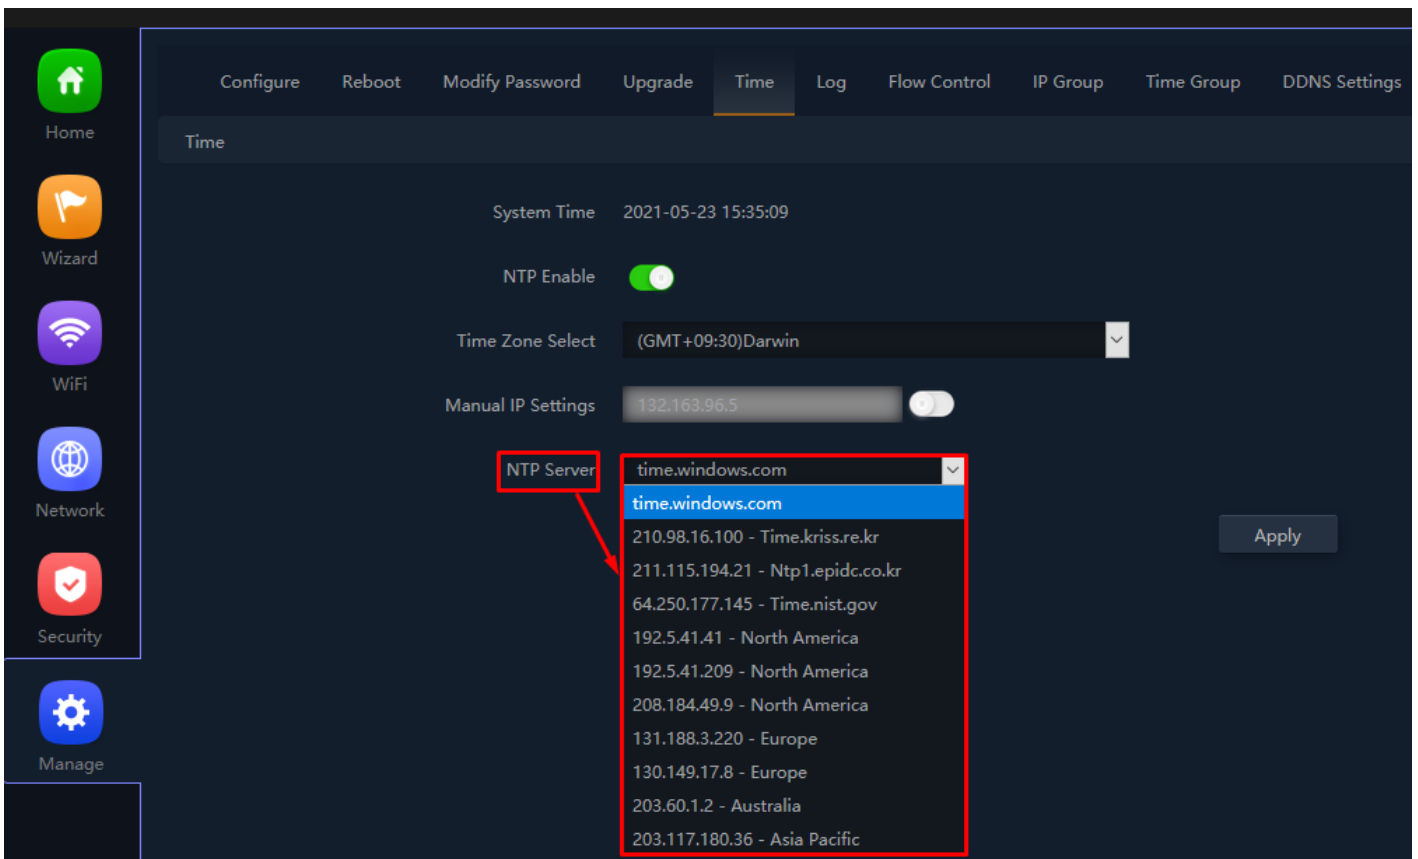

Fig 6.5.5 Selecting well know NTP server for AirONE AP1300

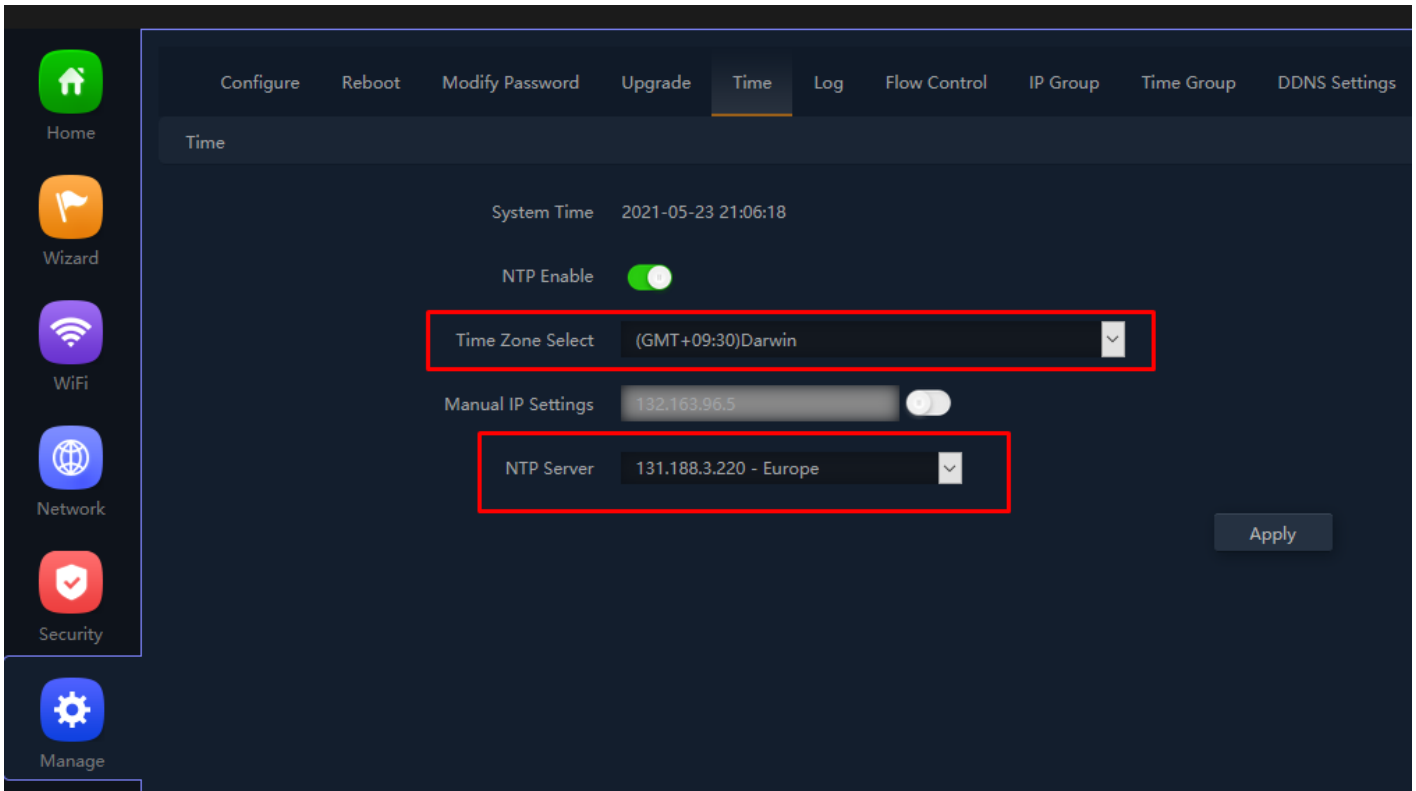

Fig 6.5.6 NTP server for AirONE AP1300

6.6 Log Setting

The Logs can record AP information effectively. The logs allow thorough tracking, alerting, and analysis when something does go wrong. It also determines the root cause of any issue.

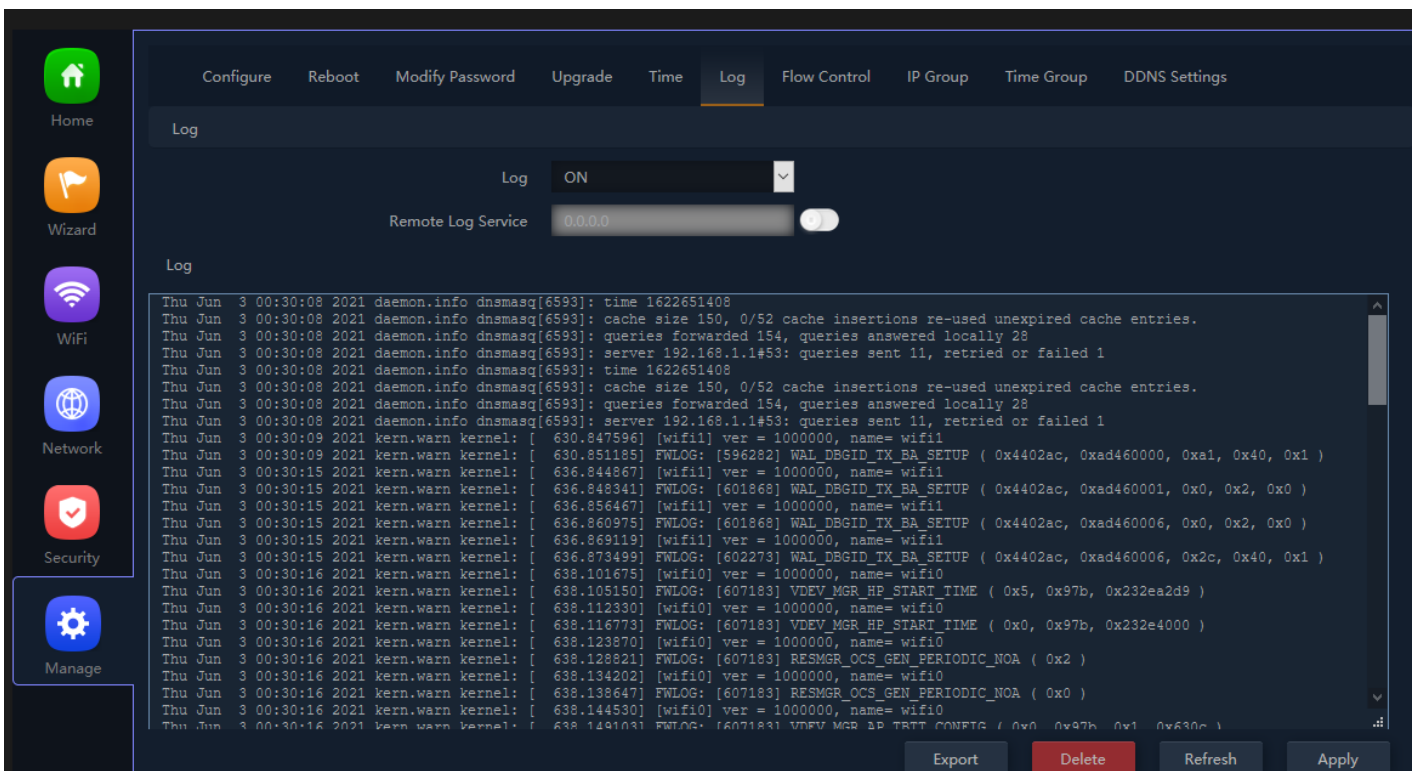

Fig 6.6.1 Default Log setting for AirONE AP1300

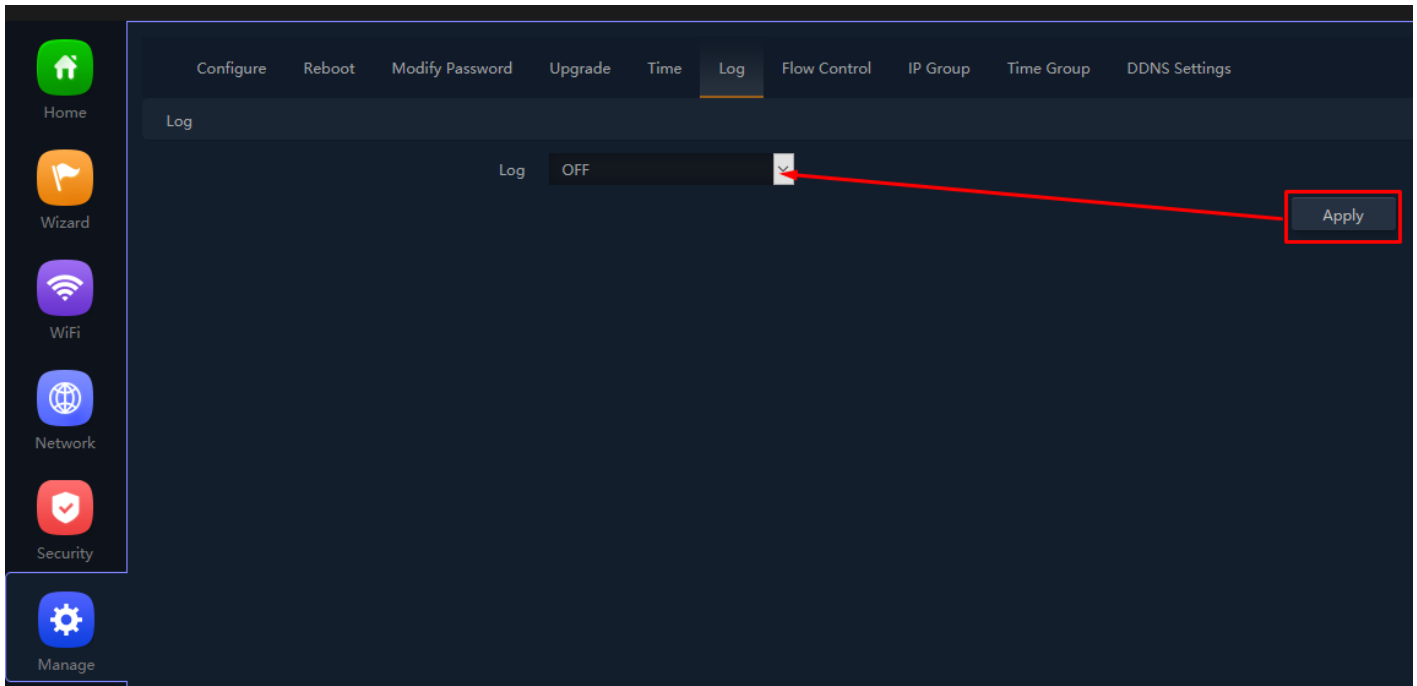

Fig 6.6.2 Turning OFF Log setting for AirONE AP1300

Fig 6.6.3 Remote Log service setting IP for AirONE AP1300

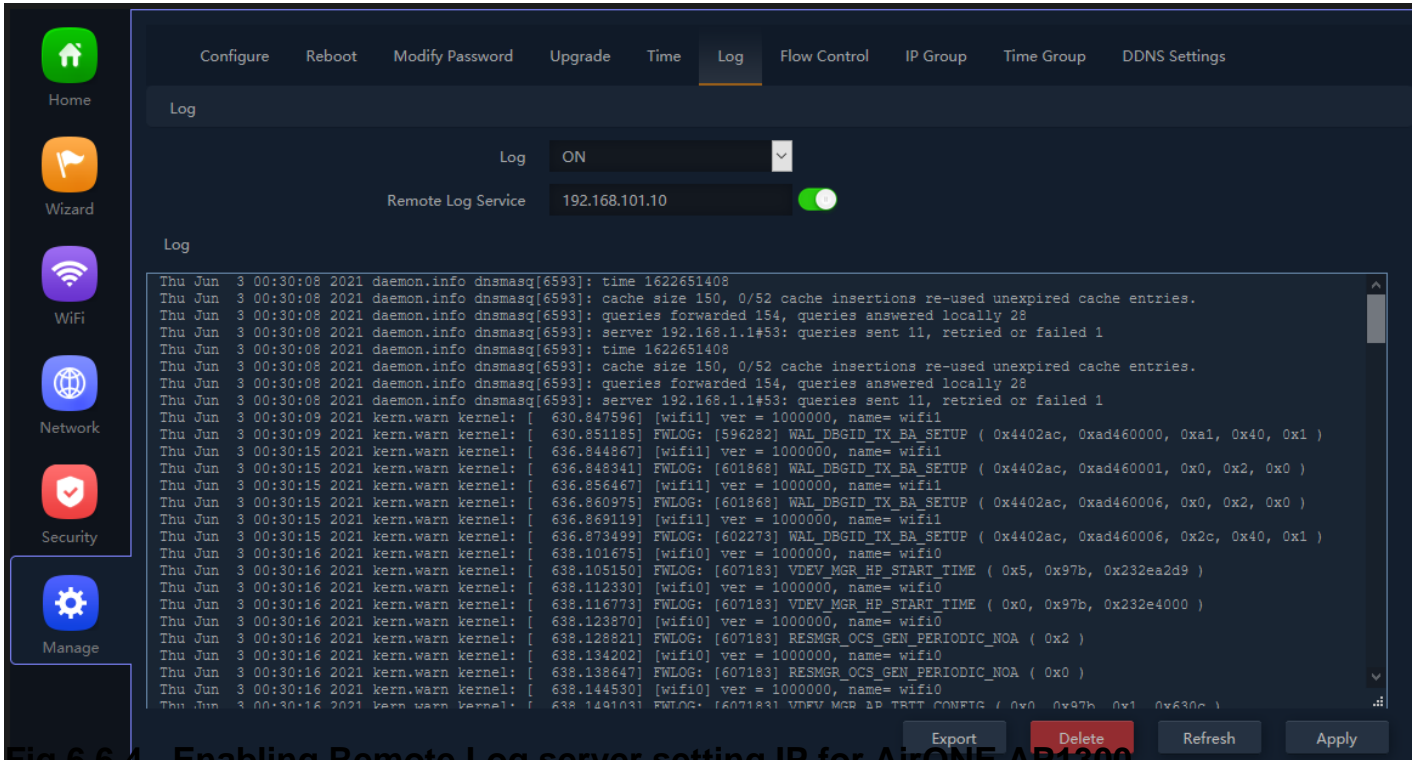

Fig 6.6.4 Enabling Remote Log server setting IP for AirONE AP1500

Recommendation:

It is strongly recommended to turn OFF logs to avoid excessive CPU cycles, Memory usage and hanging of AP in long term.

6.7 Flow Control

Enabling flow control can optimize the bandwidth requirement and improve the network experience for important applications, especially in the bandwidth hungry wireless clients environment.

Fig 6.7.1 Default Flow control page for AirONE AP1300

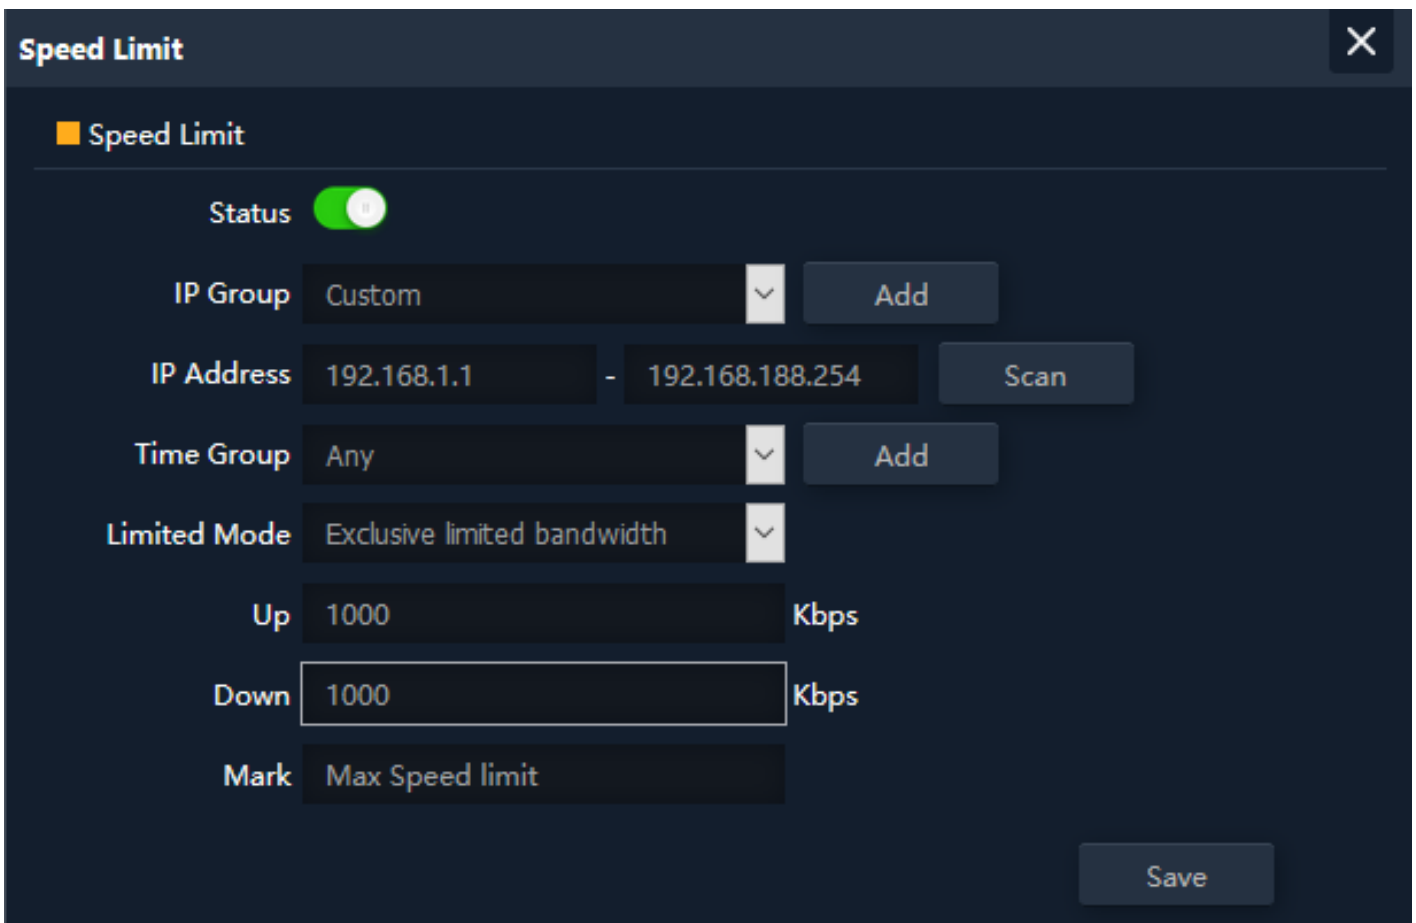

Fig 6.7.2 Enabling Speed limit for AirONE AP1300

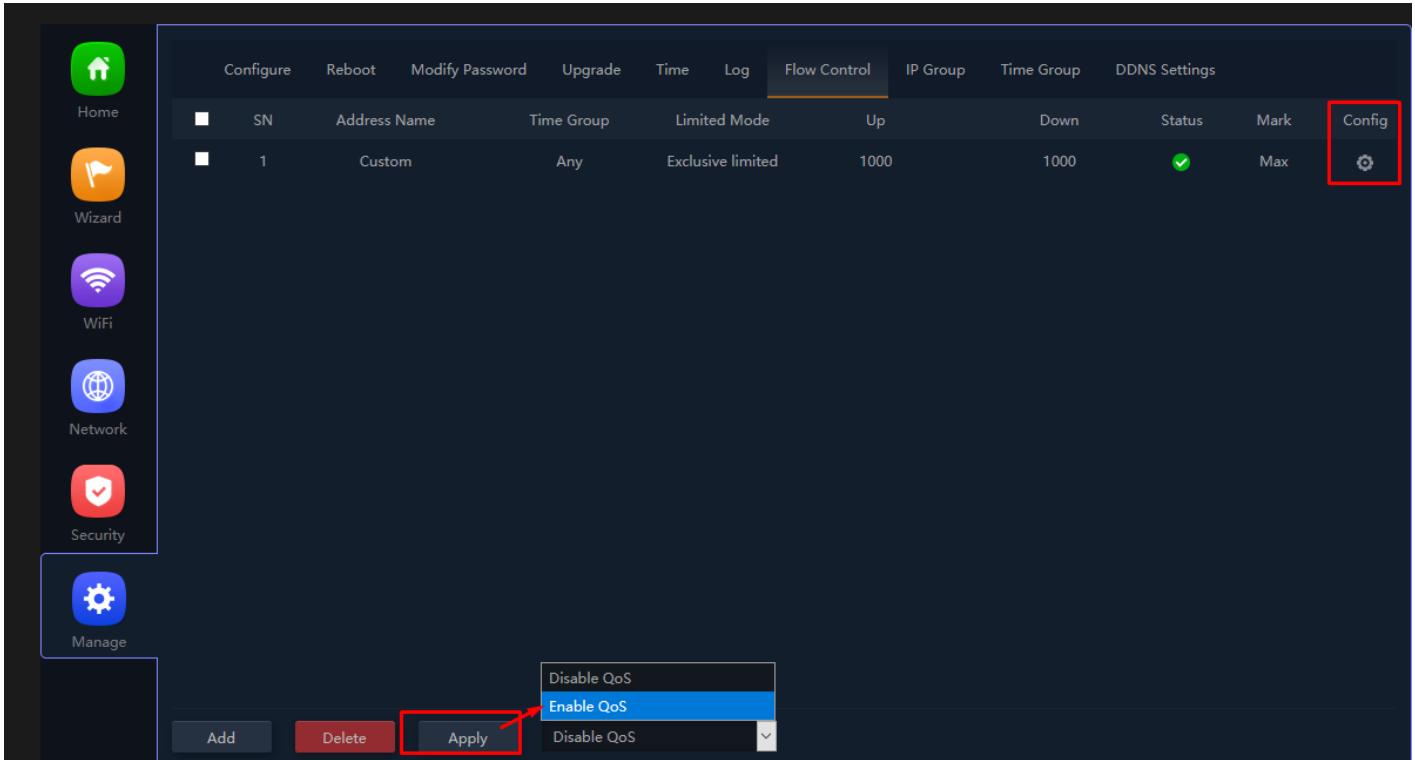

Fig 6.7.3 Flow control page for AirONE AP1300

6.8 IP Group

A single IP address divides into two sections: Network ID and Host ID. The Network ID defines the logical group where devices belong. Similarly, we can define IP group which tells AP what IP group name and associated IP address are available for wireless users.

Fig 6.8.1 Default IP group page for AirONE AP1300

Fig 6.8.2 IP group name and associated IP address for AirONE AP1300

SN	Group Name	IP Range	Mark	Config
1	QoS	192.168.188.36-192.168.188.254	QoS	

Fig 6.8.3 IP group page for AirONE AP1300

6.9 Time Group

It can create Time Group with time range and set frequency of operation for particular activity to operate in specified time. It can give automated effect to the network.

Fig 6.9.1 Default time group for AirONE AP1300

Fig 6.9.2 Setting Time group for AirONE AP1300

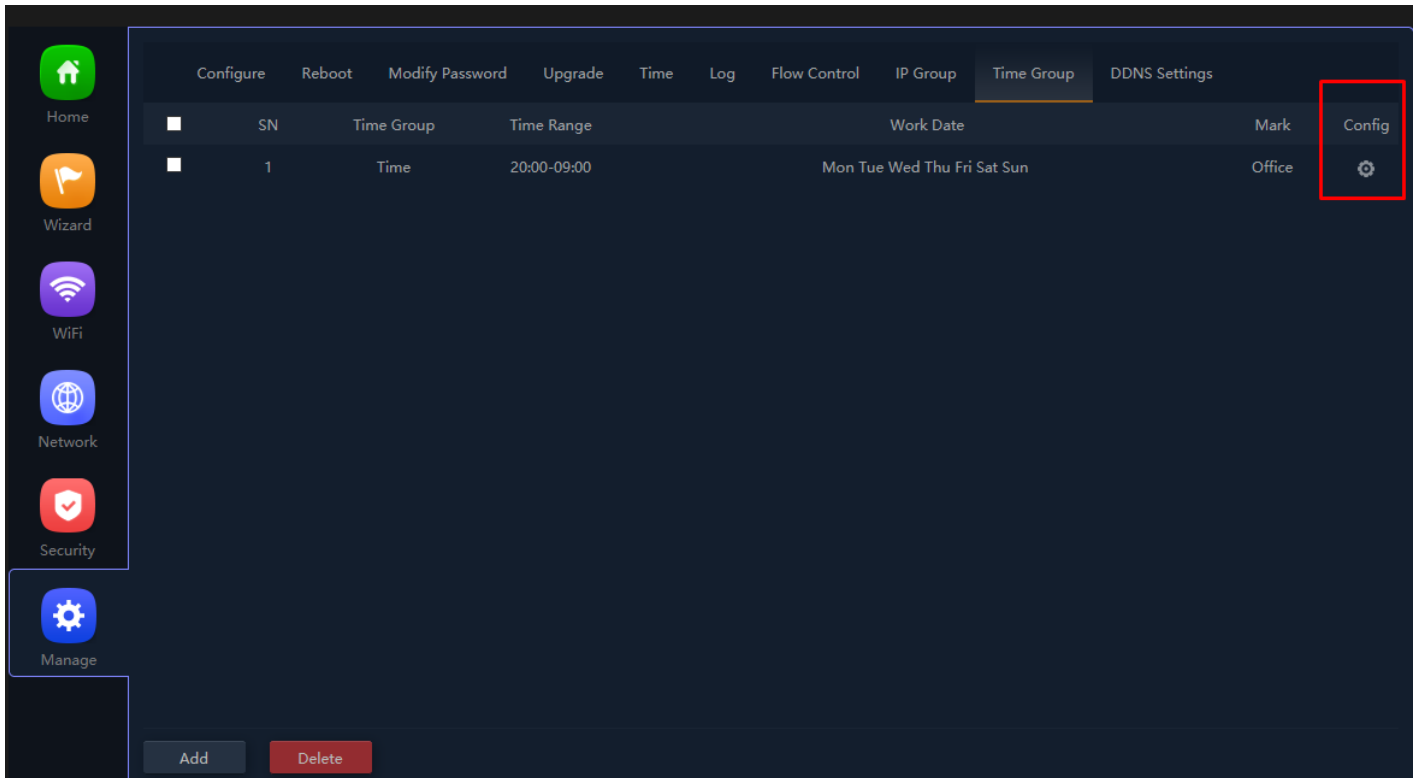

Fig 6.9.3 Time group for AirONE AP1300

6.10 DDNS Settings

DDNS (Dynamic DNS) server provides a fixed domain name for DDNS client and maps its latest IP address to this domain name. Dynamic DNS (DDNS) is an Internet service that allows controller with varying public IP addresses to be located using Internet domain names. To use DDNS, you must setup an account with a DDNS provider and set up an account with a DDNS service, the host & domain name, username, password detail will be provided by the account provider. It allows address, which enables the Internet hosts to access the router or the hosts in LAN using the domain names. As many ISPs use DHCP to assign public IP addresses in WAN, the public IP address assigned to the client is unfixed. In this way, it's very difficult for other clients to get the latest IP address of this client for access.

DDNS (Dynamic DNS) server provides a fixed domain name for DDNS client and maps its latest IP address to this domain name. When DDNS server works, DDNS client informs the DDNS server of the latest IP address, the server will update the mappings between the domain name and IP address in DNS database. Therefore, the wireless users can use the same domain name to access the DDNS client even if the IP address of the DDNS client has changed. DDNS is usually used for the Internet users to access the private Website and FTP server, both of which are established based on Web server.

Fig 6.10.1 Default DDNS page for AirONE AP1300

Fig 6.10.2 Enable DDNS page for AirONE AP1300
